The business community today is contending with unprecedented challenges stemming from the global spread of the coronavirus (COVID-19)—not least of which is the widespread anxiety and uncertainty that the pandemic has created. In times like these, business leaders look to us as lawyers to help them cut through a veritable whirlwind of fast-moving, sometimes conflicting information and to understand the legal and business ramifications of the crisis. They expect us to be problem solvers and to be a core part of any crisis response team.

During our years of leadership in government service we found a few simple, guiding principles to be helpful in a crisis. We offer these principles for general counsel and chief legal officers as they strive to protect the health of their businesses, employees and other key stakeholders.

**Communication is key.** Whether your message is aimed at your company’s employees, board or management, it is critical to communicate honestly and directly. Communicate the facts; try not to unnecessarily create anxiety or fear in the people who depend on you for leadership. Arm them with what they can do about it; with what you are doing to protect them and to protect the business; and with sources of information they can go to for trusted advice on how best to navigate the situation. Experience shows that people have a remarkable ability to confront and respond to crises when they understand the facts and the steps they need to take to help their colleagues and families—and what is good for your people is good for your entire organization.

**Anticipate potential threats.** There is a substantial likelihood that this crisis will worsen and that it will impact your business more profoundly in the coming weeks and months. Plan for all the contingencies that you can. This is not the time for a “wait and see” approach in the hope that this crisis will eventually pass. As part of your company’s leadership team, or as an adviser to that team, it is on you to look at the big picture and anticipate to the best of your abilities how the crisis might unfold and how it will affect your
business, your workforce and your customers. The people who work for you and who depend upon your advice are relying on your leadership to respond in ways that protect them, and that will ensure the resilience of your business.

As longtime legal practitioners, we also offer the following practical, proactive steps in-house counsel should consider taking to mitigate the many and future business and legal impacts of this fast-moving crisis:

Communicate with employees. Ensure that your employees understand what they should do to protect their own health and the health of their colleagues. Communicate clearly and directly, and ensure that employees who are ill or who have been potentially exposed stay home. Review and make sure that your company complies with laws governing disability, sick leave and other employment practices that may be relevant.

Review supply contracts. Proactively review your company’s contracts, whether you are the supplier or the customer, and consider how the pandemic may affect your ability to supply or to secure the products or services that are the subject of the agreement. Assess whether there are contractual provisions at issue that might cover the situation, and assess, in conjunction with your outside counsel, whether the pandemic qualifies as force majeure under the contracts.

Check business interruption coverage. Review your company’s business interruption insurance to assess whether it is applicable. Specifically, review the notice provisions of the insurance policy to ensure that you are providing any notice within the periods required by the policy.

Take care with public disclosures. If your organization is a public company, consider your disclosure obligations. Evaluate your public statements. What you say now in response to this crisis could be considered to be material by investors—and regulators. Review any previous public statements to see whether they need to be updated or modified as the crisis evolves. Consider whether disclosure of potential changes in financial results is required.

Be alert to cybersecurity risks. The fact that many employees may be working remotely will tax networks and may create vulnerabilities, particularly if your company has not previously provided for remote work on a significant scale. In addition, cyber-criminals are using the pandemic as an opportunity to capitalize on fears and engage in phishing attacks designed to gain access to confidential systems and information. Work with your IT group and cybersecurity advisers to anticipate changes in work practices and mitigate these risks.

Monitor government actions. Several states have declared states of emergency, while state consumer and federal antitrust authorities have announced a renewed focus on the sale of critical public health products. Monitor the announcements and responses of national, state and local governments, both to ensure that your company is complying with applicable directives, and to take advantage of any services or programs that may facilitate your operations.

Check financial covenants. As the crisis impacts your company’s results and the securities markets, review whether your company is compliant with any relevant financial covenants, and take appropriate steps to ensure it has adequate sources of cash and credit to maintain operations without disruption.

In times of crisis, experience teaches that effective leadership requires clear direction and accurate information, and the foresight to anticipate and prepare for future developments.

While each organization will face its own challenges when responding to COVID-19, following some simple steps and trusting in the ability of our colleagues and employees to follow our lead will help us all to weather this crisis—and help protect our business enterprises.

Jeh C. Johnson was U.S. Secretary of Homeland Security from 2013-2017. Jeannie S. Rhee served in leading roles in Special Counsel Robert Mueller’s office and previously served as deputy assistant attorney general in the U.S. Department of Justice’s Office of Legal Counsel. Both Johnson and Rhee are litigation partners at Paul, Weiss, Rifkind, Wharton & Garrison.
DOJ Issues Expedited Antitrust Guidance Regarding COVID-19 Equipment and Medication Distribution Collaboration

On April 4, the Department of Justice (DOJ) issued a business review letter stating that it does not intend to challenge a collaboration among several medical supplies distributors “to expedite and increase manufacturing, sourcing, and distribution of personal-protective equipment . . . as well as medication to treat COVID-19 patients.” This is the first business review letter issued in accordance with the recent DOJ/FTC Joint Antitrust Statement Regarding COVID-19, which we discussed in a prior memorandum. The issuance of the letter demonstrates the DOJ’s commitment to the expedited review process whereby the DOJ has stated that it will aim to “respond expeditiously to all COVID-19-related requests, and to resolve those addressing public health and safety within seven (7) calendar days of receiving all necessary information.” As we wrote previously, this process provides an opportunity for firms to gain clarity regarding the agencies’ views of business collaborations related to COVID-19, including those involving competitors, on a significantly accelerated timetable.

According to the business review letter, the collaboration at issue involves five distributors who are responding to government agencies’ requests that “distributors . . . use their industry expertise and contacts to address PPE supply chain shortages, in addition to applying their expertise to evaluate potential laboratory and medication supply issues.” This includes working with FEMA and the Department of Health and Human Services (HHS) to help in addressing supply bottlenecks, identifying supply sources, monitoring demand, and expediting distribution. As such, the business review letter notes that the “primary collaborative activity in these areas occurs at the direction of, and in the presence of FEMA, HHS, other government entities, and their agents” and includes the participation of the DOJ Antitrust Division. The distributors have committed to follow certain safeguards with respect to conduct that may have an effect on competition. As part of its analysis, the DOJ notes that “[c]onduct by federal agencies is not subject to scrutiny under the antitrust laws” and that “[c]ourts have extended this immunity to conduct by private parties acting individually or together” when the conduct is compelled by an agreement with the government and a federal agency “supervises the conduct.” In alignment with the earlier Joint Antitrust Statement, the DOJ also noted that conduct may be “consistent with the antitrust laws” when it is necessary to provide products that would not otherwise be available.

The business review letter makes clear that it is limited to conduct related to the “government’s efforts to guide PPE and medications to the places they are needed most.” The letter also notes that the “circumstances that led to this request are exceptionally pressing and unlikely to recur frequently.”

Delaware Governor Issues Emergency Order Permitting Notice of Virtual-Only Shareholder Meetings by Exchange Act Filing and Press Release

Key Takeaways

- An executive order allows Delaware public corporations, due to concerns arising from the COVID-19 pandemic, to re-notice or adjourn shareholder meetings as virtual-only meetings solely by a filing made under the Securities Exchange Act of 1934 (the “Exchange Act”) and a press release.

- The order provides needed relief to Delaware corporations that have already sent meeting notices and are unsure how to notice a change to a virtual-only format consistent with state law.

* * *

Yesterday, Delaware’s governor modified his Declaration of a State of Emergency (the “Order”) to assist public Delaware corporations that desire, as a result of concerns related to the COVID-19 pandemic, to hold annual or special shareholder meetings previously noticed for a physical location as virtual-only meetings instead. If a corporation is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, the board of directors may change a meeting currently noticed for a physical location to a virtual-only meeting by notifying shareholders solely by a document publicly filed by the corporation with the Securities and Exchange Commission pursuant to § 13, § 14 or § 15(d) of the Exchange Act and a press release that is promptly posted on the company’s website after release. Similarly, if it is “impracticable” due to the COVID-19 pandemic to convene a shareholder meeting at its previously announced physical location, companies may adjourn the meeting to be held as a virtual meeting by providing notice in an Exchange Act filing and a press release promptly posted to the corporation’s website. The relief afforded by the Order applies only to corporations that had already noticed annual or special shareholder meetings as of the date of the order.

The Order brings Delaware in line with guidance issued by the SEC that allows public companies to notice changes in a meeting’s time, date or location via a supplemental proxy filing and a press release, among other conditions. The Delaware General Corporation Law, however, did not clearly permit Exchange Act reporting corporations to modify information set forth in their meeting notices without sending a new notice to shareholders. Importantly, the Order also contains a “savings clause,” which would eliminate any portion of the relief that ultimately is determined to be unenforceable under Delaware law. Therefore, sending a notice of changes to a meeting’s date, time or location is still advisable if circumstances permit.

For the Order, click here.

New York State Governor Signs Law Protecting Health Care Workers, Facilities and Administrators from COVID-19-Related Liability

Summary

On April 3, New York Governor Andrew Cuomo signed into law an act that immunizes health care facilities and professionals from certain forms of liability during the COVID-19 emergency. Along with a collection of other states, New York has taken action to shield health care providers from liability arising from the difficult medical decisions presented by the pandemic.

Key Takeaways

- The Emergency Disaster Treatment Protection Act temporarily immunizes health care facilities and professionals from civil liability arising from certain acts or omissions resulting in injury or death during the COVID-19 emergency.

- The new statute expands on Governor Cuomo’s recent executive order – immunizing physicians and nurses – to extend liability protections to health care facilities, administrators and volunteer organizations working to address the COVID-19 outbreak.

On April 3, 2020, New York Governor Andrew Cuomo signed into law the Emergency Disaster Treatment Protection Act (the “Act”), which immunizes health care facilities and professionals from certain forms of liability during the COVID-19 emergency. The stated purpose of the Act is to “promote the public health, safety and welfare of all citizens by broadly protecting the health care facilities and health care professionals in [New York] from liability that may result from treatment of individuals with COVID-19 under conditions resulting from circumstances associated with the public health emergency.”

The Act expands on Governor Cuomo’s March 23, 2020 executive order, which protects physicians and nurses from civil liability for certain acts or omissions that result in injury or death during the COVID-19 emergency. The new law broadens this coverage to encompass health care facilities and their administrators, as well as volunteer organizations that make their facilities available to support the state’s response to COVID-19.

The immunity protections under the statute apply retroactively to March 7, 2020 and will last as long as the COVID-19 emergency declaration is in effect.
Under the Act, the following three conditions must be met for immunity to apply:

1. the facility or professional arranged for or provided health care services pursuant to a COVID-19 emergency rule or otherwise in accordance with applicable law;

2. the act or omission at issue occurred in the course of arranging for or providing health care services and the treatment of the individual was impacted by the health care facility’s or health care professional’s decisions or activities in response to or as a result of the COVID-19 outbreak and in support of New York State’s directives; and

3. the health care facility or health care professional arranged for or provided health care services in good faith.

The immunity applies to acts or omissions that result in “harm”—which is defined to include both physical and nonphysical contact that results in injury or death of an individual—or “damages,” meaning economic or non-economic losses arising from such contact that results in injury or death to an individual.

It is important to note that the new law goes beyond protecting actions related to the treatment of COVID-19 itself and could encompass good-faith decisions and activities by health care professionals that were (i) made in response to or as a result of the COVID-19 outbreak and (ii) in furtherance of the state’s public policy objectives. For instance, if a hospital made a decision to allocate resources to COVID-19 patients in a way that resulted in injury or death to one or more non-COVID-19 patients, but was consistent with the public good, the law could protect the hospital from liability for ordinary negligence, provided the three conditions in the statute are met.

The statute does not immunize liability for harm or damages caused by an act or omission constituting willful or intentional criminal misconduct, gross negligence, reckless misconduct or intentional infliction of harm. However, decisions resulting from a scarcity of medical supplies, staffing or other shortages appear to be protected under the Act due to the overwhelming toll the pandemic has taken on health care resources across New York.

Finally, the new law extends the same liability protections to volunteer organizations that have made their facilities available to support New York State during the crisis. If acting in good faith, a volunteer organization will not be subject to criminal or civil liability for harm or damages that occur in or at its facilities arising from COVID-19—related activities, provided the three conditions in the statute are met.

New York and a collection of other states have taken action to mitigate some of the extraordinary challenges posed by the pandemic to our health care system and its facilities, administrators and practitioners. It remains to be seen whether other states will follow or elect to take alternative approaches to addressing the litigation risks to their health care systems and providers posed by COVID-19.

**Appellate Litigation in the Age of COVID-19**

The United States Supreme Court and other federal and state appellate courts are adjusting their practices in response to the COVID-19 pandemic. Courts are canceling arguments, postponing them, or providing for telephonic arguments and are making other adjustments in procedures, schedules, and formats. We provide an overview of the steps taken to date by the United States Supreme Court, federal courts of appeals, and state appellate courts in light of the ongoing emergency.

**Key Takeaways**

- The United States Supreme Court has indefinitely postponed arguments from its March and April sittings.

- The Supreme Court is otherwise proceeding with its business, issuing opinions by posting them on its website; the Justices have continued to hold their scheduled conferences, calling in from their homes rather than convening in person.

- The Supreme Court appears to have slightly slowed the pace at which it grants review in new cases. If the Court reschedules this spring’s arguments to the fall, it may grant review in fewer cases to compensate.

- The Supreme Court has issued an order modifying certain deadlines, including extending the deadline for petitions for review and signaling that other extension requests will be granted in the ordinary course. But it has not yet modified its paper filing requirements.

- Lower courts of appeals have generally either postponed oral arguments or proceeded with telephonic arguments, encountering some technological difficulties. Several courts have extended deadlines and dispensed with or modified paper filing requirements.

**United States Supreme Court**

**Oral Arguments**

At the beginning of the COVID-19 emergency, the Supreme Court had two argument sessions remaining this term: a March sitting, slated to run from March 23 to April 1, and an April sitting, slated to run from April 20 to April 29. On March 16, the Court indefinitely postponed the oral arguments that were scheduled for the March sitting, announcing that it “will examine the options for rescheduling those cases in due
course in light of the developing circumstances.” On April 3, the Court likewise postponed the April arguments. It announced that it will “consider rescheduling some cases” from the two sessions before the end of the Term “if circumstances permit in light of public health and safety guidance.” The Court further indicated that it will “consider a range of scheduling options and other alternatives if arguments cannot be held in the Courtroom,” suggesting that it would at least contemplate arguments by audio or video conference.

The cases scheduled to be heard in the two sessions include the disputes over President Trump’s financial records, which had been scheduled to be argued on March 31, and cases challenging “faithless elector” laws that seek to bind the vote of a State’s presidential electors, which is scheduled to be argued on April 28. The sittings also included many significant but potentially less time-sensitive cases, including cases involving the government’s ability to place conditions on expressive policies of groups receiving federal funds; Oklahoma’s ability to exercise jurisdiction over serious crimes on a large portion of its land; a conscience exemption from the Affordable Care Act’s birth-control mandate; copyright protection for a software interface; and the ability of courts to adjudicate employment-discrimination claims by employees of religious schools.

The Court has three options for resolving the March and April cases. First, it may decide the cases without oral argument, as it does sometimes when it summarily reverses the decisions of lower courts. Second, it may choose to conduct oral arguments by video or audio conference or by some other means. Third, the Court could simply postpone arguments and reschedule them after the COVID-19 emergency subsides. That could push arguments to the fall, if not later.

We think the third option is the most likely outcome for cases that are not time-sensitive. We think the Court will be reluctant to decide many of the significant and contentious cases before it without conducting oral arguments. Likewise, we think the Court is unlikely to opt for telephonic arguments for the full slate of cases, given the Court’s historical reticence to alter the argument format by, for example, allowing for live streaming or cameras in the courtroom. The technical difficulties that have been marring lower-court telephonic arguments, discussed below, would likely be amplified at the Supreme Court level given that most of the Justices are very active at argument and given the Court’s deeply ingrained adherence to formal traditions. By contrast, there is no major downside to deferring argument for cases that are not especially time-sensitive, assuming the delay is for no longer than a few months.

If the Court does opt to reschedule the arguments after the COVID-19 emergency subsides, it may choose to hold the arguments in October, when it would normally begin arguments for the 2020 term. The practical effect of doing so would be delaying by a few weeks the cases currently slated for next term and any additional cases in which the Court grants review. Such a delay would be immaterial; if anything, it would enable the parties in those cases to get more generous extensions of time for their briefing. Of course, if the COVID-19 emergency is not over by October, the Court may need to postpone arguments for even longer.
As for the cases mentioned above that are time-sensitive, it is unclear what the Court will do. Because many of the lawyers involved in those cases are based outside Washington, any sort of modified in-person argument before the end of the term seems exceedingly unlikely. Argument by video or audio conference carries the risk of technical difficulties, which would be particularly pronounced in those high-profile cases. And it is unclear whether the Court will feel comfortable deciding such important cases without argument. While the Justices could issue written questions and ask the parties to submit written responses, that also seems unlikely, as it would require a majority of the Justices to agree on the questions themselves.

Perhaps the most palatable option would be to reschedule those cases as soon as arguments can safely be held—perhaps even over the summer, when the Court would normally be in recess and the Justices would ordinarily be traveling and speaking all over the world. Given the uncertainty about when the COVID-19 emergency will subside and the time-sensitive nature of the cases, however, the Court may ultimately decide to proceed with arguments in those cases by video or audio conference, perhaps adopting procedures to minimize the potential for Justices and lawyers to speak over each other.

Grants of Review and Decisions in Argued Cases

The COVID-19 emergency also appears to be affecting the process of granting review (or “certiorari”) in new cases. Since the beginning of the widespread shutdowns, the Court has granted review in only one case. Although the sample size remains small, the Court appears to be moving slightly more slowly in filling its docket, perhaps anticipating the potential backlog of this term’s cases that will need to be pushed into the fall. In particular, the Court may be particularly reluctant to grant review in contentious, closely divided cases. It is not yet certain, however, whether there will be a material effect on the overall number of grants of review going forward.

In other respects, the Court is proceeding with its normal work. The Justices convened for their scheduled weekly conferences on March 20 and 27, with the Justices largely participating remotely. The Court has also been issuing opinions, dispensing with the traditional procedure of the Justices taking the bench to provide an oral summary of their opinions. Instead, the Court has been posting opinions on its website. It is possible that the Court will proceed more quickly to issue some of this term’s anticipated opinions in cases that have already been argued, given the additional time the Court will have to work on the opinions in lieu of preparing for oral arguments.

Procedures for Litigants

The Supreme Court issued an order modifying certain procedures in light of the COVID-19 emergency. For parties seeking review, the Court has extended the applicable deadlines. Petitions for review are now due 150 days, rather than 90 days, after the applicable lower-court ruling. Notably, by operation of statute, the Court cannot grant additional extensions beyond that time in civil cases. The Court has also stated that motions for extensions of time to file other documents—such as briefs in opposition, reply briefs, and merits
briefs—will ordinarily be granted. The changes do not apply to cases in which the Court has already granted review. The Court has not dispensed with paper-copy filing requirements, and we believe it is unlikely to do so. It has, however, implemented enhanced screening procedures for hand-delivered filings, “strongly encourag[ing]” parties to send filings by mail or commercial carrier instead.

**Federal Courts of Appeals**

Although the practices in the federal courts of appeals vary, those courts have generally chosen to hold arguments telephonically; dispense with oral argument altogether and decide case on the written briefs; or postpone arguments until the end of the COVID-19 emergency.

Telephonic arguments pose particular problems for appellate courts because multiple judges are on each panel, often accustomed to peppering advocates with rapid-fire questions in no particular order. Some circuits seem to have greater technological capabilities than others. The Ninth Circuit, for example, is conducting video arguments. The court has extensive prior experience with videoconferencing technology, as it has permitted both judges and lawyers to appear by video in certain circumstances even before the current crisis. Consistent with past practice in that circuit, the arguments have been live-streamed, and they are also posted online for subsequent viewing. Even in the Ninth Circuit, however, there have been some glitches as judges and lawyers have adapted to the virtual format. Delays in the video feed in the Ninth Circuit sometimes caused participants to talk over one another. The D.C. Circuit’s first telephonic arguments likewise faced various technical difficulties, including dropping participants from the line, eliciting frustration from the judges on the panel.

The Second Circuit has adopted a process specific to telephonic arguments, providing three minutes of uninterrupted time for the advocate, followed by a dedicated period for each judge to ask all of his or her questions. Those modifications have helped to avoid confusion. We expect to see other courts adopting similar procedures to fit the new argument format.

Aside from making adjustments to oral argument, many courts of appeals are also either postponing all filing deadlines for a certain period or indicating that they will liberally grant motions for extension, and many are also dispensing with paper-copy filing requirements.

**State Appellate Courts**

On the whole, state appellate courts appear to be more technologically adventuresome than their federal counterparts. Many state appellate courts are providing for videoconference arguments, including courts in California, Texas, and North Dakota. Some have even been using commercially available videoconference programs such as Zoom, seemingly without cataclysmic consequences. Others, including New York, Pennsylvania, and Washington, have postponed or canceled arguments. Many state appellate courts are also extending filing deadlines.

CARES Act UPDATE: SBA Issues Interim Final Rule for Paycheck Protection Program

This memorandum updates our previously published memoranda concerning the Paycheck Protection Program (“PPP”) under the Small Business Administration’s (“SBA”) Section 7(a) lending program, including our memoranda regarding the CARES Act generally (available [here](#)) and how the CARES Act expands access to the Section 7(a) loan program (available [here](#)).

On the evening of Thursday, April 2, 2020, the SBA issued an interim final rule (“IFR”) regarding implementation of the PPP (available [here](#)), and this morning a final borrower loan application form was published (available [here](#)). The IFR and revised application form clarify certain issues raised under the CARES Act and previously issued guidance on the PPP, although in some respects are contrary to previously issued guidance. This memorandum summarizes certain key aspects of the IFR and revised application form as they relate to such prior guidance.

**Borrower Considerations**

Among the key updates arising out of the IFR and revised loan application form pertinent to borrowers are the following:

- **First-Come, First-Served.** The IFR expressly states that PPP loans will be made on a first-come, first-served basis. Given the anticipated high demand for this program, prospective borrowers should submit their loan applications as soon as possible.

- **Interest Rate.** Contrary to guidance published by the U.S. Treasury earlier this week, all PPP loans will have an interest rate of 1.00%, rather than 0.50%.

- **Eligibility Criteria.**
  - **Affiliate Aggregation Requirements.** The IFR does not substantively alter previous guidance on the applicability of the SBA’s affiliate aggregation principles, which require a prospective borrower to aggregate its number of employees with those of its affiliates (and their respective affiliates), subject to waivers or different size tests for accommodations and food services businesses (NAICS code beginning with 72), businesses operating as a franchise and businesses receiving financial assistance from a small business investment company licensed by the SBA (additional information is available [here](#)). However, the IFR states that the SBA “intends to promptly issue additional
guidance with regard to the applicability of affiliation rules at 13 C.F.R. §§ 121.103 and 121.310 to PPP loans,” without providing further insight into what sort of guidance may be forthcoming.

- **Application Certifications.** The PPP loan application form published by the U.S. Treasury and the SBA earlier this week required applicants and owners of 20% or greater ownership stakes in applicants to make certain certifications regarding the loan and its terms, among other things. While the IFR and revised loan application form have added items that a borrower must certify, the loan application form no longer requires certification by owners of the borrower. The borrower certifies its own eligibility for a PPP loan by making each of these certifications, including to the borrower’s documentation verifying “the number of full-time equivalent employees on the Applicant’s payroll.” Because the onus is on the applicant to verify its eligibility, number of employees and total payroll costs, prospective borrowers and their investors should carefully consider whether affiliate aggregation requirements apply to their circumstances and how that might affect the prospective borrower’s PPP eligibility before making these certifications in the loan application (i.e., prior to applying).

- **Citizenship and Residency Requirement.** The loan application form published earlier this week also required borrowers and their owners of 20% or greater ownership stakes to respond to three questions, including whether each of them is a U.S. Citizen or Lawful Permanent Resident, and noted that if any such person did not so confirm, the loan would be denied, without providing any guidance on how this question should be answered by respondents that are not individuals. The IFR is notably silent on this requirement, however, and the citizenship or residency question has been removed from the revised loan application form. In its place, the revised loan application form now asks the borrower to confirm that the U.S. is the principal place of residence for all of its employees included in its average monthly payroll cost calculation.

- **Loan Amounts, Uses and Forgiveness.**

- **Payroll Costs.**

  - **Measurement Period.** The IFR contains an internal inconsistency when describing how average monthly payroll costs are to be calculated. In one instance, the IFR illustrates a methodology for applicants to calculate payroll costs by aggregating payroll costs “from the last twelve months” (see Section 2(e)(i)). However, in another instance, the IFR instructs lenders to confirm a borrower’s average monthly payroll costs “for the preceding calendar year” (see Section (3)(b)(iii)), and the revised loan application form mirrors this requirement by stating that “most Applicants will use the average monthly payroll for 2019.” While further guidance from the SBA to resolve this inconsistency would be helpful, the revised application form does not refer to the “last twelve months” calculation method. Prospective borrowers should follow
the instructions for calculating payroll costs as indicated in the revised loan application form itself.

- **Independent Contractors.** Although prior guidance was unclear on the point, the IFR expressly provides that independent contractors may not be taken into account by businesses for PPP purposes (including, for example, in calculations of payroll costs) because independent contractors are eligible to apply for their own PPP loans.

- **Federal Employment Taxes.** The IFR confirms the implication in recent guidance that federal employment taxes imposed or withheld between February 15, 2020 and June 30, 2020 are excluded from calculations of payroll costs.

- **Permitted Uses; Minimum Use of Loan Proceeds for Payroll Costs.** The IFR adds a new requirement that not less than 75% of loan proceeds be used for payroll costs, and therefore not more than 25% of loan proceeds may be used for non-payroll costs otherwise eligible under the PPP. Borrowers are required to certify in their loan applications that they understand this restriction, and the SBA will direct borrowers who violate this restriction to repay amounts improperly used. We note that the IFR and revised loan application form are somewhat ambiguous on whether loan proceeds may be used for these permitted purposes solely during the eight-week period post-disbursement. However, it is clear that forgiveness is only available in respect of amounts used during this eight-week period.

- **Loan Forgiveness Limitations.** While the IFR helpfully confirms that PPP loans will be eligible for forgiveness of up to 100% of the principal loan amount and all accrued interest, it also adds a cap on forgiveness for non-payroll costs equal to 25% of the loan forgiveness amount.

- **Liability for Unauthorized Use of Loan Proceeds.** The IFR provides that borrowers who use loan proceeds for unauthorized purposes will be directed to repay those amounts and may also be subject to additional liability (e.g., fraud) for knowingly using such proceeds for unauthorized purposes. The IFR further provides that owners of a borrower may be held directly liable for their own unauthorized use of loan proceeds.

**Lender Verification Obligations**

The CARES Act and previous PPP guidance did not provide potential lenders with clarity on their obligations and responsibilities in underwriting loans and processing requests for forgiveness. While the IFR does not definitively address all open points of concern to PPP lenders, it does provide more concrete direction regarding their obligations to review and confirm applicants’ eligibility for PPP loans and forgiveness, and also shields lenders from certain liabilities.
Limited Liability for Lenders. The IFR reaffirms the “hold harmless” provision in the statute by stating that, while lenders are obligated to comply with their duties as set out in the IFR, lenders will be held harmless for a borrower’s failure to comply with PPP terms. In addition, lenders may rely on a borrower’s certification as to its use of PPP loan proceeds and specified documents provided by a borrower to determine a borrower’s eligible loan amount and eligibility for forgiveness.

SBA Lending Criteria. Lenders need not comply with the SBA’s traditional lending criteria (see 13 CFR § 120.150). Instead, lenders may rely on a borrower’s certifications made in its loan application to determine PPP eligibility.

Underwriting Requirements. In the underwriting process, lenders must:

- Confirm each of the following:
  - Receipt of a borrower’s certifications required by the SBA’s loan application form;
  - Receipt of information demonstrating that a borrower had employees for whom it paid salaries and payroll taxes on or around February 15, 2020; and
  - The dollar amount of a borrower’s average monthly payroll costs for the preceding calendar year by reviewing payroll documentation submitted by the borrower.

- Follow applicable Bank Secrecy Act (BSA) requirements.

  - Federally insured depository institutions and federally insured credit unions should continue following their existing BSA protocols. (We note that for existing customers as to which financial institutions have already collected and verified beneficial ownership information, in almost all cases they will only need to confirm with customers that the prior information is accurate and up-to-date.) The IFR states: “PPP loans to existing customers of such institutions will generally not require reverification under BSA requirements.”

  - Entities not subject to the BSA who wish to become PPP lenders should establish anti-money laundering and related compliance programs equivalent to those of a comparable federally regulated institution.

Per the IFR, lenders’ underwriting obligations are limited to those described here and reviewing PPP loan applications.

¹ As noted above, this is inconsistent with other provisions of the IFR that refer to average monthly payroll for the preceding 12 months.
Loan Forgiveness Processing. Lenders are not required to conduct any verification of documentation submitted by a borrower in support of a request for forgiveness so long as the borrower attests that it has accurately verified its eligible payments.

Ongoing Updates

While the IFR is effective immediately upon its publication in the Federal Register, it is under continuing review and open for public comment, and the SBA may revise it as it deems appropriate. We will continue to monitor any revisions to the IFR and the final rule, when it is published, and provide our clients with timely information on how any revisions may affect their participation (or lack of participation) in the PPP.

White-Collar Enforcement Priorities in the Wake of COVID-19

In the wake of the COVID-19 pandemic, the Department of Justice (“DOJ”) and the Securities and Exchange Commission (“SEC”) each have signaled an intention to focus, at least temporarily, on misconduct related specifically to the coronavirus. That focus, combined with the practical limitations imposed on government agencies and the courts by the pandemic, has resulted in a slowdown of traditional white-collar enforcement activity. That slowdown, however, may well be short-lived, and there is reason to expect robust investigative activity by the SEC, DOJ, state Attorneys General and newly created oversight bodies (such as the Special Inspector General for Pandemic Recovery) as the pandemic recedes. We identify below potential areas of focus for future investigative and enforcement activity.

The Current Enforcement Environment: Shift in Priorities and Practical Challenges

On March 16, 2020, United States Attorney General William Barr issued a memorandum directing all United States Attorneys to “prioritize the detection, investigation, and prosecution of all criminal conduct related to the current pandemic.” As examples of unlawful conduct “seeking to profit from public panic,” the memorandum referenced the sale of fake cures for COVID-19, phishing emails from entities posing as the WHO or CDC and malware being inserted onto mobile apps designed to track the spread of the virus.

In a follow-up memorandum issued on March 19, 2020, Deputy Attorney General Jeffrey Rosen further directed each United States Attorney to appoint a Coronavirus Fraud Coordinator to, among other things, direct the prosecution of coronavirus-related crimes, including medical providers obtaining patient information for COVID-19 testing, and then using that information to fraudulently bill for other tests and procedures, and individuals and businesses fraudulently seeking donations for illegitimate or non-existent charitable organizations.

The SEC likewise has signaled an enforcement focus on investment and market activity relating to the coronavirus. The SEC has stated that the Division of Enforcement and the Office of Compliance Inspections and Examinations (“OCIE”) “remain fully operational” and that the agency “is actively monitoring our markets for frauds, illicit schemes and other misconduct affecting U.S. investors relating to COVID-19.”

Certain practical limitations stemming from the COVID-19 pandemic may make it more challenging for the SEC and DOJ to carry out their traditional investigative roles. The SEC has announced that it “has transitioned to a full telework posture with limited exceptions.” On March 17, the Executive Office of the President issued a memorandum mandating that all agencies “immediately adjust operations and services to minimize face-to-face interactions, especially at those offices or sites where people may be gathering in close proximity or where highly vulnerable populations obtain services.” Because of these and other social
distancing guidelines affecting courts, government employees, potential witnesses and counsel, these agencies are more limited in their ability to conduct standard investigative techniques, such as interviewing witnesses or, in the case of the SEC, taking investigative testimony. Criminal authorities reportedly are facing difficulty convening grand juries in certain jurisdictions, and courthouses across the country have drastically limited their operations, in many cases allowing only emergency proceedings.6

The Enforcement Horizon

New Oversight Bodies Created by the CARES Act

The recently enacted Coronavirus Aid Relief and Economic Security Act (the “CARES Act”) establishes new oversight bodies with respect to the use of relief funds disbursed pursuant to the Act.7 If history guides, these oversight bodies could take an active role in investigations focused on recipients of relief funds well after the COVID-19 pandemic abates.

In particular, the CARES Act provides for a Pandemic Response Accountability Committee with subpoena power staffed by Inspectors General of other agencies, a Congressional Oversight Commission, and a Special Inspector General for Pandemic Recovery.8 This three-body structure is modeled after provisions within the Troubled Asset Relief Program (“TARP”) enacted after the 2008 financial crisis and, based on that precedent, could have a significant impact on future enforcement of financial crimes.9

So, for example, the Special Inspector General for Pandemic Recovery (“SIGPR”) appears to be modeled after the Special Inspector General for the Troubled Asset Relief Program (“SIGTARP”).10 The CARES Act makes it SIGPR’s duty to “conduct, supervise, and coordinate audits and investigations of the making, purchase, management, and sale of loans, loan guarantees and other investments” made by the Treasury pursuant to the Act.11 While this statutory mandate appears narrowly focused on oversight of fraud in the administration and receipt of stimulus funds, the Act’s language closely mirrors the statutory mandate of SIGTARP.12 In the decade-plus since it was created, SIGTARP has relied on an analogous jurisdictional mandate to conduct a wide range of investigations of businesses (and their employees) that received TARP funds, including a number of cases focusing on conduct post-dating and unrelated to the financial crisis and stimulus bill.13 By way of example, SIGTARP participated in a multi-agency investigation into allegations that a large automobile manufacturer that received TARP funds failed to disclose an ignition switch defect. SIGTARP has collected over $11 billion in penalties, and its investigations have led to more than 381 criminal convictions.14

While it remains likely that SIGPR will, at least initially, focus its investigative resources on fraud related to the procurement of relief funds made available under the CARES Act, the precedent provided by SIGTARP—coupled with the enormous sums being made available to recipients through the CARES Act—suggests that over time SIGPR may pursue a much broader range of investigations focused on recipients of relief funds.
The Oversight Commission established by the CARES Act is charged with overseeing whether private entities receiving funds under the Act have acted in accordance with the obligations set out by the Act and is empowered to conduct investigations and hold hearings. Again, and by analogy, in the three years that the Congressional Oversight Panel created by TARP was active, it held dozens of hearings. While it is too early to predict the role of the Oversight Commission created by the CARES Act, the precedent created by TARP suggests significant activity from the Commission in the wake of the COVID-19 pandemic.

The Misuse or Selective Disclosure of Material Nonpublic Information

The effects of the COVID-19 pandemic have led to rapid market swings, with record losses sometimes followed days later by record gains. This volatility may result in a focus by the SEC, DOJ and other enforcement agencies on trading by public companies and corporate insiders—as well as by external advisors being provided access to material nonpublic information—during the COVID-19 pandemic. Similarly, the SEC may scrutinize public companies’ compliance with their obligations under Regulation FD. And, in addition to issues involving material nonpublic information, other traditional market abuses like spoofing may also generate particular attention.

As noted here, on March 23, 2020, the Co-Directors of the Enforcement Division of the SEC issued a statement in which they reminded market participants to be especially vigilant about the potential misuse of material nonpublic information in the current environment and urged public companies to follow established disclosure controls and procedures. The Co-Directors noted that as market conditions change quickly, corporate insiders (and their advisors) regularly learn material nonpublic information that may be even more valuable than in ordinary circumstances. They also noted that the unique circumstances of the day may lead to more people than usual having access to material nonpublic information.

As a result, public companies, their advisors and other market participants should be particularly mindful of using or selectively disclosing material nonpublic information during the COVID-19 pandemic and should continue to stringently enforce relevant controls and procedures.

Public Company Disclosures

Pronounced market volatility while the effects of the virus remain acute may also ultimately result in an increased enforcement focus on public company disclosures made during the pandemic, even after the effects of COVID-19 abate. While SEC Chairman Jay Clayton has acknowledged that the effects of the coronavirus may be difficult for a company to assess with precision, the Chairman has likewise cautioned that “how issuers plan for that uncertainty and how they choose to respond to events as they unfold can nevertheless be material to an investment decision.”

Although the SEC has granted conditional regulatory relief from certain disclosure requirements for public companies affected by the coronavirus outbreak and recently extended this relief to cover filings due as late as July 1, 2020, this conditional relief should not be read to portend that any “free-pass” will be given
to companies that fail to disclose material information (or fail to revisit, refresh or update previous disclosures that have become materially inaccurate). Indeed, as recently as March 25, the SEC’s Division of Corporation Finance released guidance on disclosure and other securities law obligations that specifically cautioned that “a number of existing rules and regulations require disclosure about the known or reasonably likely effects of and the types of risks presented by COVID-19.”

Thus, while the SEC may have granted certain forms of conditional regulatory relief in response to the outbreak and has acknowledged the difficulty that companies will face in predicting the effects of the coronavirus on their businesses, public companies should not expect that the SEC will turn a blind eye to perceived public disclosure shortcomings in the months to come. To the contrary, recent guidance suggests that in future months the SEC may apply particular scrutiny to company disclosures (or purported omissions) made during the pandemic. Additional guidance on these issues and relevant considerations for public filers can be found here and here.

Similarly, while the Attorneys General of states severely impacted by the COVID-19 outbreak have recently focused their resources on protection efforts, it is reasonable to expect a shift to investor protection following the pandemic, particularly in those jurisdictions that have previously identified investor protection as a priority. These efforts may be buttressed by the broad statutory authority provided in certain states. The Martin Act, for example, gives New York’s Attorney General broad powers to investigate and combat securities fraud and has been utilized in the past to investigate and file enforcement actions against public companies for allegedly making false or materially incomplete public statements.

**Investment Advisers**

The COVID-19 pandemic has caused unprecedented interruptions to the ordinary operations of businesses throughout the United States and elsewhere. While OCIE recently announced that it had moved to conducting all examinations remotely, it remains operational and active. And, recent experience following events such as Hurricane Sandy suggest that the COVID-19 outbreak may trigger heightened scrutiny of how investment advisers fulfilled their obligations during periods of market disruption, including business continuity plans (“BCPs”). In the wake of Hurricane Sandy, for example, OCIE examined the BCPs of roughly 40 investment advisers “to assess their compliance with applicable laws, rules and regulations relating to BCP plans.” Subsequently, the SEC proposed a rule requiring investment advisers to adopt and implement written BCPs to mitigate “natural disaster, cyber-attack, technology failures, the departure of key personnel, and similar events.” Given recent volatility in the market and potential losses incurred by investment advisers, it is also reasonable to expect regulatory focus on disclosures to investors concerning risk and liquidity, as well as valuation issues. Additional guidance regarding these issues can be found here.

**Conclusion**

Like almost all organizations, public and private, federal enforcement agencies are confronting unique practical challenges presented by the COVID-19 pandemic. To combat unlawful attempts to exploit the
pandemic for financial gain, the DOJ, SEC and state Attorneys General are dedicating their strained resources to coronavirus-related frauds. The result has been a slowdown in traditional forms of white-collar enforcement. Nonetheless, recent DOJ and SEC pronouncements, unprecedented market volatility and the creation of new oversight bodies established by the CARES Act all suggest a possible uptick in investigative and enforcement activity as the pandemic recedes.

In these fraught times, when so many aspects of corporate and business life have been upended and as businesses face unprecedented challenges, it nonetheless will be important for companies to adhere to their communications and securities trading policies, to continue to comply with their obligations to maintain disclosure controls and procedures and internal controls, and to be mindful of their disclosure obligations generally.

Update: Mitigating Securities Litigation Risks Related to the Coronavirus

This memorandum updates our alert, “Mitigating Securities Litigation Risks Related to the Coronavirus,” issued March 5, 2020, taking into account recent developments. It also outlines steps companies can take to mitigate the risks associated with COVID-19 shareholder litigation.

The spread of the coronavirus (COVID-19) has significantly impacted the global economy and businesses’ ability to manufacture, distribute and market their products and services, as well as caused the most severe U.S. stock market decline since the 2008 recession, with equity markets down nearly 30% since February. That stock market decline undoubtedly will precipitate stock drop litigation. As recent trends in event-driven litigation demonstrate, the plaintiffs’ securities bar is likely to attempt to craft theories for converting these (and potential future) drops into shareholder derivative claims and class-wide fraud claims.

Potential Risks of Shareholder Derivative Lawsuits

As we explained in the March 5 Memorandum, we expect the plaintiffs’ bar to file derivative lawsuits following COVID-19-related stock drops, asserting that a company’s board ignored warnings that the COVID-19 pandemic would adversely impact business operations and results, and/or took insufficient steps to mitigate the risk. For example, a company that turns out to have insufficient liquidity may face hindsight accusations that its directors failed to take reasonable steps to increase liquidity and conserve resources, such as drawing down revolving credit facilities or canceling a company’s stock buy-back program or reducing its dividend payments.

Since derivative lawsuits frequently are dismissed based on the board’s exercise of business judgment, boards should carefully document their consideration of, and response to, the impact of COVID-19 on their businesses, and consider establishing a public record of their diligence. Certain steps companies may consider taking include:

- Potentially forming a COVID-19 pandemic board subcommittee to handle rapid-response decision making;
- Ensuring that the audit committee is working closely with the auditors to ensure that financial reporting, auditing and review processes are as robust as possible;
- Ensuring that the disclosure committee is still able to perform its functions in respect of public disclosure and is in close contact with risk management and business continuity teams;
Developing contingency plans in the event senior management becomes ill or incapacitated (which may also trigger disclosure requirements);

Instituting additional safeguards regarding internal controls in light of the implementation of business continuity contingency plans and reduced access to company premises;

Developing strategies to increase liquidity and stress testing different disaster scenarios; and

Reviewing and, if appropriate, reinforcing cybersecurity protections, particularly for companies that have moved to a remote-access model. Our full memo on Mitigating Cybersecurity Risks Related to the Coronavirus can be found here.

Numerous boards are also considering whether to suspend or reduce stock repurchases and/or dividend payments for the next year or more. Although any such decision should certainly take into account any prior statements made about the company’s confidence in its ability to pay the dividend or about its commitment to maintaining its dividend, ultimately the board should do what is prudent for the business. Companies need to maintain financial integrity in these times of crisis: if paying the regular dividend is expected to weaken the company’s financial position, then that fact should be carefully considered in determining whether to change policy regarding dividend payments. Unless a company has made unequivocal statements regarding maintaining dividend payments, akin to a guarantee, it may well be that the securities litigation risk of a claim that the company promised to maintain the dividend will be relatively low.

Ultimately, determining what, if any, actions are appropriate should be made individually by each company based on its unique circumstances, in consultation with counsel.

**Mounting Risks of Shareholder Stock-Drop Cases**

In addition to derivative lawsuits, we also expect a wave of private securities fraud litigation and SEC enforcement actions related to the business and market impacts of COVID-19. In fact, two putative securities fraud class action lawsuits were filed on March 12, 2020, based on COVID-19-related stock drops in a pharmaceutical company¹ and a cruise line.² A third securities fraud class action lawsuit, accusing a U.S. Senator of selling stock based on material nonpublic information about the potential impact of the COVID-19 pandemic, was filed by alleged contemporaneous traders on March 23, 2020.³

As companies are grappling with the business consequences of COVID-19, we expect that plaintiffs’ counsel will be carefully scrutinizing quarterly earnings announcements—including the upcoming announcements for the first quarter of calendar year 2020. Since many companies will already have spoken publicly about the effects of COVID-19 on their business operations and earnings, plaintiffs likely will focus on whether new, and previously undisclosed consequences of the pandemic, are emerging in connection with disappointing financial results. In particular, we expect the plaintiffs’ bar to dissect companies’ COVID-19 messaging and disclosures. Companies accused of giving false hope, providing unduly rosy guidance, failing to identify areas of weakness or generally understating the impact of the pandemic, may face securities stock-drop lawsuits following disappointing quarterly earnings announcements.

As we stated in the March 5 Memorandum, public companies should continue to consider whether they have provided an appropriate level of transparency in their public disclosures into the expected impact of the pandemic on operations. Companies should consider whether their risk disclosures need to be updated to augment risks related to the COVID-19 pandemic. Also, companies should consider whether their prior forward-looking guidance has been overtaken by subsequent events and should be withdrawn or updated, as nearly 200 public companies have already done. Note that the decision to provide, withdraw or revise guidance must be made individually by each company based on its unique circumstances. Public companies should evaluate whether they are currently in a position to produce reliable guidance given market conditions and the degree of uncertainty surrounding the economic and other impacts of COVID-19. Additionally, public companies should consider the implications of disclosing revisions to previously issued guidance on their future public disclosure obligations; if a public company issues revised guidance, plaintiffs’ firms may later argue that the company has assumed a duty to provide further revisions as a result of changing circumstances relating to COVID-19 or otherwise. Our full memo on withdrawing or revising earning guidance can be found here.

We similarly expect the plaintiffs’ bar and the SEC to focus on companies whose executives and directors purchase or sell stock during the crisis. In the context of private securities litigation, such insider sales can be used by plaintiffs to demonstrate scienter, or fraudulent intent, on behalf of a company executive, by showing that corporate insiders knew that a company’s stock was overvalued in advance of a negative announcement, or undervalued in advance of a positive breakthrough, for example. Separately, insider stock sales can constitute unlawful insider trading, which is independently actionable conduct under the federal securities laws. Notably, the SEC Division of Enforcement Co-Directors issued a statement on March 23, 2020, observing that, amid the current crisis, a greater number of people than usual may have access to material nonpublic information, and cautioning such people “to keep this information confidential and to comply with the prohibitions on illegal securities trading.” Depending on the circumstances, companies should consider whether it might be appropriate to temporarily prohibit stock purchases or sales by corporate officers and directors. Companies are also advised to revisit and closely adhere to corporate controls and procedures around the use and confidentiality of material nonpublic information, including
insider trading policies, codes of ethics and Regulation FD. Our full memo on Insider Trading and Selective Disclosure Risks Related to COVID-19 can be found [here](#).

We will continue to closely monitor the legal and business implications associated with the COVID-19 pandemic and report on further developments.

COVID-19: LIBOR 2021 Cessation Timing Unchanged Though Planning Delays Expected

Notwithstanding numerous COVID-19-related challenges faced by market participants, UK regulators have affirmed that—at least for now—the anticipated cessation of the London Interbank Offered Rate ("LIBOR") at the end of calendar year 2021 remains unchanged. Complying with regulators’ and working groups’ recommendations for reducing LIBOR exposure and transitioning to alternative reference rates, such as the Federal Reserve Bank of New York—endorsed Secured Overnight Financing Rate ("SOFR") for USD LIBOR instruments, may prove even more challenging than originally anticipated.1

The escalating COVID-19 health crisis and accompanying global markets volatility has forced many companies to pivot their resources towards immediate priorities such as managing liquidity, credit risk, and operational hazards. As a result, market participants have expressed concern about meeting internal deadlines involving their transition away from LIBOR, which the UK’s Financial Conduct Authority ("FCA") has previously advised will cease after the end of 2021.2

Nevertheless, on March 25, 2020, the FCA, Bank of England ("BoE"), and members of the Working Group on Sterling Risk-Free Reference Rates ("RFRWG"), emphasized that the COVID-19 crisis does not affect the underlying need to transition away from LIBOR and therefore—at this point in time—will not delay the transition currently expected for the end of calendar year 2021.3 The FCA, BoE, and the RFRWG also noted that market participants should continue to prepare for the transition despite the COVID-19 crisis.4

2 See David Crow, Banks Plead For Rethink Over Post-crisis Rules, The Financial Times (Mar. 19, 2020), available here ("[Bank] executives have also asked that the transition from the discredited Libor rate to new interest benchmarks be delayed from its current hard deadline of 2022 to free up employees to work on more pressing matters.").
3 Impact of the Coronavirus on Firms’ LIBOR Transition Plans, Financial Conduct Authority (Mar. 25, 2020), available here (explaining that “[t]he central assumption that firms cannot rely on LIBOR being published after the end of 2021 has not changed and should remain the target date for all firms to meet”).
4 Id.
The FCA, BoE, and the RFRWG did acknowledge that the pandemic has impacted the transition programs in many firms.\(^5\) Particularly, some interim milestones in segments of the UK market, such as the loan market, will be affected because they are more reliant on LIBOR and have had made less progress in transition.\(^6\) The FCA, BoE, and the RFRWG stated that they will continue to assess the impact of the crisis on transition timelines and update the market place as soon as possible.\(^7\)

Conversely, the International Swaps and Derivatives Association (“ISDA”) extended the deadline for responses to its current pre-cessation triggers market consultation in light of the developing COVID-19 crisis, recognizing the diversion of resources by many market participants to crisis-related workstreams.\(^8\) In the consultation, ISDA is seeking market guidance on the desirability to propose pre-cessation triggers for derivatives contracts that would lead to a transition away from LIBOR under certain specified events prior to a cessation, including if regulators were to declare LIBOR not representative of rates in the underlying market.\(^9\) ISDA ultimately plans to utilize the consultation results in an amendment of the 2006 ISDA Definitions, which “provide the basic framework for the documentation of privately negotiated interest rate and currency derivative transactions,”\(^10\) as well as an industry-wide protocol to uplift legacy transactions.

LIBOR transition planning may also be impacted by the potential delay of consideration by the New York State Legislature of the recently announced legislative solution by the Alternative Reference Rate Committee (“ARRC”), a working group convened to help prepare for USD LIBOR’s cessation.\(^11\) The ARRC’s proposed legislation aims to encourage widespread adoption of SOFR for USD LIBOR instruments by (1) requiring its use in instances when a legacy contract is silent as to fallbacks, or fallbacks that reference a LIBOR-based rate and (2) definitively establishing that the recommended benchmark replacement (SOFR) is a commercially reasonable substitute for, and commercially substantially equivalent to, LIBOR. It also seeks to minimize litigation risk by providing a safe harbor for the use of the recommended benchmark replacement. Although the ARRC had hoped to promote the legislative action within calendar year 2020,\(^12\)

\(^5\) Id.
\(^6\) Id.; see also Huw Jones, Plan to End Libor Pricing for New Loans by September May Prove Tough, Reuters (Mar. 25, 2020), available here (explaining how, due to the COVID-19 pandemic, it may “prove tough” for banks to stop pricing new loans against LIBOR by September 30, 2020, a deadline previously set by the FCA).
\(^7\) Impact of the Coronavirus on Firms’ LIBOR Transition Plans, Financial Conduct Authority (Mar. 25, 2020), available here.
\(^8\) Pre-cessation Consultation: Responding to COVID-19, ISDA (Mar. 18, 2020), available here.
\(^9\) Id.
\(^12\) Id. at 5.
the New York State Legislature likely will focus on the implementation of emergency measures until its June 2, 2020 recess, given New York’s emergence as the U.S. epicenter of the COVID-19 crisis.

Market participants are now being forced to invest significant time and resources dealing with a myriad of issues that have arisen in relation to the COVID-19 crisis. Planning for LIBOR’s impending cessation may prove even more challenging as a result. Although the timetable for LIBOR’s anticipated cessation currently remains the same, we will continue to monitor any changes to previous directives and deadlines issued to market participants occasioned by the unfolding COVID-19 crisis and provide further updates as appropriate.

March 27, 2020

**An Update on Merger Review During the COVID-19 Coronavirus Outbreak: Early Terminations to Resume**

Last week we wrote about developments in the United States and European Union affecting merger review procedures in those jurisdictions as a result of the COVID-19 Coronavirus pandemic. At that time, the United States antitrust agencies announced that they would not grant any requests for early termination under the Hart-Scott-Rodino Antitrust Improvements (HSR) Act and that the FTC had implemented a temporary e-filing system for premerger notifications.

Today, the agencies announced that, given the success of the e-filing program, effective as of March 30, they “will resume the practice of granting early termination of the HSR Act’s waiting periods when both agencies have determined that no enforcement action will be taken during the waiting period.” In a blog post, the Director of the FTC’s Bureau of Competition emphasized that early termination is discretionary and that during this time, given resource allocation concerns, the agencies expect to grant fewer requests than normal and that requests will take longer to grant. According to the blog post, the staff of the Premerger Notification Office “is at capacity, and both Agencies’ litigation teams are already working hard to evaluate the extent to which individual transactions might present competitive concerns;” therefore, parties should not reach out to advocate for early termination.

In our earlier memorandum, we also reported that the European Commission Directorate-General for Competition requested deal parties to consider delaying merger filings “due to the complexities and disruptions caused by the Coronavirus” if possible. This request is still in effect.

It remains a possibility that parties may need to pull and refile their HSR submission in the event the FTC and DOJ are unable to process HSR filings in the current environment. Furthermore, with respect to deals currently under review or to be reviewed, there has been no change to the DOJ’s earlier announcement that it is asking parties to add 30 days to timing agreements in order for the DOJ to complete its review, or to the FTC’s earlier announcement that it too may ask for timing extensions. More broadly, it remains the case that competition review and approval delays are possible on a global basis given the magnitude of the pandemic. We continue to monitor news affecting competition enforcement during the pandemic and will issue updates as warranted.

CARES Act: Federal Income Tax Relief for Individuals and Businesses in Response to the Coronavirus Pandemic

On March 27, 2020, the House of Representatives passed the Senate-approved “Coronavirus Aid, Relief, and Economic Security Act,” or the “CARES Act” (the “Act”). The President has indicated that he plans to sign the bill immediately. The stated purpose of the Act is to provide emergency assistance and health care response for individuals, families and businesses affected by the 2020 coronavirus pandemic. The Act signifies the third phase of Congress’s legislative moves to provide relief in response to the pandemic. The Act makes a number of significant changes to the U.S. federal income taxation of both individual taxpayers and businesses, including with respect to elements of the broad tax reform enacted at the end of 2017 known as the “Tax Cuts and Jobs Act” (the “TCJA”), as well as certain technical corrections to existing law. Such changes generally include:

Provisions Generally Affecting Individuals

- **Immediate Cash Payment.** Providing a $1,200 ($2,400 in the case of a joint return) tax credit to eligible U.S. individuals, with an additional $500 tax credit per qualifying child, subject to phase-out such that taxpayers with adjusted gross income in excess of $99,000 ($198,000 in the case of a joint return) would not receive such credit. These amounts are to be paid directly to individuals as rapidly as possible by the government.

- **Expanded Charitable Contribution Deductions.**
  - **Extra Deduction for Charitable Contributions by Non-Itemizers.** For eligible individuals who do not itemize tax deductions, permitting up to $300 of certain charitable contributions made in cash in 2020 to be treated as “above-the-line” deductions.
  - **Increased Deductibility for Charitable Contributions.** Increasing the deductibility of certain charitable contributions made in cash by electing individuals during 2020, by suspending the 50% of adjusted gross income limitation.

---

1 Please see our [separate client alert](#) discussing other elements of the Act.

2 The first two phases were signified by the "Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020” and the “Families First Coronavirus Response Act” (discussed in our [prior client alert](#)).
- **Increased Availability of Losses for Non-Corporate Taxpayers.** Delaying applicability of the TCJA’s loss limitation rules applicable to pass-through businesses and sole proprietors, by making the limitations on the utilization of “excess business losses” (generally defined as deductions attributable to a trade or business that exceed the income from such business by a threshold amount ($500,000 for joint taxpayers)) applicable starting with the 2021, rather than 2018, tax year.

- **Retirement Accounts.**

  - **Flexibility Regarding Withdrawals from Retirement Accounts.** In the case of distributions to certain individuals directly affected by coronavirus, waiving the 10% withdrawal penalty tax on early distributions from eligible retirement plans (up to $100,000), permitting coronavirus-related distributions to be recontributed to such retirement plans over a three-year period (not subject to the annual cap that would otherwise apply), and allowing any taxable income attributable to such distributions to be recognized over a three-year period.

  - **Suspension of Minimum Distribution Requirements.** Allowing certain defined contribution plans and IRAs to suspend required minimum distributions in 2020, with respect to certain eligible participants, so that such participants are not forced to receive distributions based on 2019 year-end account valuations given the significant decline in market conditions since the end of 2019.

- **Income Exclusion for Certain Employer Payments of Student Loans.** Excluding from an employee’s income payments made by an employer (whether to the employee or the applicable lender) before 2021 of principal or interest due with respect to a qualified education loan incurred by the employee for education of the employee (subject to the existing $5,250 annual cap on the amount of all educational assistance that an employee may receive from its employer on a tax-free basis).

**Provisions Generally Affecting Businesses**

- **Extended Due Date for Employer Portion of Social Security and Self-Employment Taxes.** Delaying the payment of certain employer payroll taxes and 50% of self-employment taxes for the period between the enactment of the Act and December 31, 2020, until December 31, 2021 and December 31, 2022, with 50% of such taxes payable by each such date.

- **Increased Availability of NOL Carryforwards and Carrybacks.** With respect to net operating losses (“NOLs”), (1) for tax years prior to 2021, suspending the TCJA rule limiting the use of NOL carryforwards in a given year to 80% of taxable income and (2) for losses generated in the 2018, 2019

---

3 On Friday March 20th, the government announced that the due date for filing 2019 income tax returns, making payments of 2019 income taxes, and making estimated tax payments (including in respect of self-employment tax) for the first quarter of 2020 will be delayed to July 15th, 2020 (discussed in our prior client alert).
or 2020 tax year, permitting NOL carrybacks to the prior five tax years, with special rules for real estate investment trusts and insurance companies.

- **Increased Section 163(j) Limitation on Deductibility of Interest.** Increasing the Section 163(j) business interest deductibility limitation, enacted pursuant to the TCJA, from 30% of an amount generally equivalent to earnings before interest, taxes, depreciation and amortization (“EBITDA”) to 50% of EBITDA for the 2019 and 2020 tax years (subject to the ability to elect out of such increased limitation), with taxpayers able to use 2019 EBITDA for purposes of calculating their Section 163(j) limitation for the 2020 tax year. Different technical rules apply for partnerships.

- **Employee Retention Credit for Employers Subject to Closure or Significant Decline in Business Due to Pandemic.** Allowing employers subject to a full or partial suspension of business due to orders from a governmental authority, or suffering a more than 50% decline in gross revenue (as compared to the same quarter from the prior year), a refundable credit against applicable employment taxes for each calendar quarter, in an amount equal to 50% of the “qualified wages” (including allocable qualified health plan expenses) paid to each employee of such employer for such calendar quarter during the period from March 13, 2020 through the end of 2020 (with “qualified wages” for each employee capped at $10,000 for all calendar quarters). For eligible employers whose average number of full-time employees during 2019 was greater than 100, “qualified wages” are wages paid to employees when they are not providing services due to business operations being fully or partially suspended as a result of a government shut-down order; for eligible employers whose average number of full-time employees during 2019 was 100 or fewer, “qualified wages” include all employee wages, whether the employer is subject to a shut-down order or open for business. In addition, certain controlled-group rules apply to treat multiple persons as a single employer for purposes of these rules. To avoid a double benefit, any wages taken into account in determining the credit allowed under these rules will not be taken into account in determining the employer credit for paid and family leave. Moreover, the eligible employer is not allowed a tax deduction with respect to wages for which the employee retention credit is claimed.

- **Accelerated Recovery of AMT Credit Carryforward Refunds.** Accelerating the ability for corporations to recover alternative minimum tax (“AMT”) credit carryforwards, which the TCJA made refundable over a period running through 2021 in connection with its repeal of the corporate AMT, by permitting such credits to be recovered immediately.

- **Immediate Deduction for Certain Capital Expenditures.** Enabling certain businesses (including those in the hospitality industry) to take an immediate tax deduction (rather than depreciation deductions over a 39-year period) for costs associated with improving building facilities.

- **Increased Deductibility for Charitable Contributions.** Increasing the deductibility of certain charitable contributions made in cash by electing corporations during 2020, by increasing the 10% of taxable income limitation to 25%.
The legislative process for passing the Act was expedited given growing adverse economic impacts resulting from the coronavirus pandemic. It is likely that the Act may raise certain technical questions, and the Internal Revenue Service and Treasury Department are likely to undertake regulatory projects to provide guidance with respect to many aspects of the Act. The Act may have unexpected consequences on transactions, including transactions that have closed in prior years (for example, the NOL carryback provisions may have unexpected effects on closed M&A deals that did not anticipate these rules would return after they were repealed by the TCJA). We urge everyone to consider the impacts of the Act on themselves, on their businesses and on pending or closed transactions.

Key Provisions of the “Phase Three” COVID-19 Stimulus Package

On March 25, 2020, the Senate passed the Coronavirus Aid, Relief, and Economic Security Act (“CARES Act” or the “Act”), an emergency stimulus package that aims to provide financial assistance and other relief to individual taxpayers, businesses, and certain industries that have been particularly affected by the ongoing novel coronavirus (“COVID-19”) pandemic. The House expects to approve the bill today. The President has indicated that he plans to sign the bill immediately. The CARES Act is the third piece of legislation—“phase three”—that Congress has fast-tracked to combat the financial and public health impact of COVID-19.

This Memorandum provides a short executive summary, followed by more detailed summaries of key provisions of the approximately 900-page CARES Act, including its provisions for loans and other relief for small businesses, emergency funding for companies that have suffered severe financial consequences as a result of COVID-19, financial assistance and other benefits—such as the expansion of unemployment benefits—to individual taxpayers, and increased measures to support the healthcare response to COVID-19. For additional resources and real-time updates regarding new legal developments in connection with COVID-19, please visit Paul, Weiss’s Coronavirus Resource Center.

I. Executive Summary

Loans and Other Relief for Small Businesses and Other Organizations

The CARES Act appropriates $349 billion in additional funds for guaranteed loans under the Small Business Administration’s (“SBA”) section 7(a) loan program and expands the scope of the program to assist small businesses during the COVID-19 emergency.

The Act enhances access to section 7(a) loans by relaxing loan eligibility criteria for certain small businesses and organizations, increasing the limit on loan and guarantee amounts, expanding the allowable uses of the proceeds of the loans, and allowing certain other non-SBA entities to lend funds under the program. Additionally, the Act provides entrepreneurial grants to help small businesses, particularly women- and minority-owned small businesses, that have been

1 Coronavirus Aid, Relief, and Economic Security Act, H.R. 748, 116th Cong. (2020). All citations are to the Senate bill.
4 H.R. 748, §§ 1102, 1107.
5 Id. § 1102.
affected by the COVID-19 emergency. It also expands access to the SBA’s Economic Injury Development Loans, and provides bankruptcy protections to certain debtors.

Financial Assistance for Certain Affected Industries and Other Companies

The CARES Act appropriates up to $500 billion in funding for loans, loan guarantees, and investments to provide liquidity to eligible businesses that are suffering as a direct result of the COVID-19 pandemic, including commercial airlines, air cargo companies, and businesses critical to maintaining national security. $425 billion of this total is available to businesses outside of the aforementioned industries who do not otherwise have access to credit. Recipients of funds will be subject to certain restrictions, such as being unable to repurchase any outstanding equity interests or extend any dividends while a loan is outstanding. Additionally, certain recipients of loans and guarantees must agree that employees paid $425,000 per year or more will not receive an increase in pay until at least one year after the loan is fully repaid.

The extension of these loans and investments will be monitored by a newly-created Special Inspector General’s office and through a Congressional Oversight Commission. The Act also provides stability to the banking system by granting the Federal Deposit Insurance Corporation (“FDIC”) additional authority to establish debt guarantee programs and adjust the capital leverage ratio for community banks. It further relaxes several accounting standards currently in place for financial institutions, as related to the categorization of “troubled debt restructuring” and the classification of current expected credit losses.

Health Care Response to COVID-19

The CARES Act contains a number of provisions meant to increase production and accessibility to resources to combat the spread of COVID-19. These provisions include addressing and preventing a shortage of medical supplies and devices necessary for the treatment, prevention, and diagnosis of COVID-19. The Act also includes provisions designed to increase access to health care services, including by amending and extending the Families First Coronavirus Response Act’s (“FFCRA”) no-cost COVID-19 testing

\textbf{Financial Assistance for Individual Taxpayers}

The CARES Act provides financial assistance to individuals through tax rebates, expanded unemployment insurance benefits, and modifications to rules governing retirement accounts, retirement plans, and charitable contributions.

\section*{II. Loans and Other Relief for Small Businesses and Other Organizations}

\textbf{Small Business “Paycheck Protection Program”}

\textit{Eligibility}

The section 7(a) loan program is the SBA’s primary method for providing financial assistance to small businesses. The CARES Act expands section 7(a) loan eligibility through June 30, 2020 through a new Paycheck Protection Program, to include the following:

(i) any business concern, nonprofit organization, veterans organization, or Tribal business concern that employs not more than the greater of 500 employees or the number of employees established by the SBA for the industry in which the entity operates;

(ii) individuals who operate as sole proprietorships or independent contractors, or are self-employed; and

(iii) businesses in the accommodation and food services industry with no more than 500 employees per location.\textsuperscript{16}

Although the Paycheck Protection Program includes a limit on the size of eligible businesses, it waives certain affiliation rules for: (i) businesses operating as a franchise; (ii) businesses in the accommodation and food services sectors with no more than 500 employees; and (iii) businesses that receive financial assistance from a licensed small business investment company.\textsuperscript{17} The bill does not otherwise waive existing SBA affiliate rules, which generally aggregate the employees of companies that are under common control.\textsuperscript{18}

\textsuperscript{16} Id. § 1102(a)(2).
\textsuperscript{17} Id.
\textsuperscript{18} See 13 CFR § 121.103.
For purposes of calculating whether an entity employs not more than 500 employees, employers are required to count each individual employed on a full-time, part-time, or other basis.\(^\text{19}\)

Borrowers must certify: (i) that the current economic uncertainty makes the loan necessary to support ongoing operations; and (ii) that the loan proceeds will be used to retain workers and maintain payroll or make mortgage, rent, and utility payments.\(^\text{20}\)

The Act waives the SBA’s standard requirement that section 7(a) loan applicants be “unable to obtain credit elsewhere.”\(^\text{21}\) Applicants that have received an SBA Economic Injury Disaster Loan (another type of loan offered by the SBA outside of the section 7(a) loan program) after January 31, 2020 may still apply for section 7(a) loans, but may not use the proceeds for the same purpose.\(^\text{22}\)

**Loan Amounts, Terms, and Uses**

The Paycheck Protection Program authorizes loans in amounts up to the lesser of:

- i) $10 million (which replaces the existing section 7(a) cap of $5 million);
- ii) 2.5 times the recipient’s average monthly payroll costs\(^\text{23}\) during the one-year period before the loan is made,\(^\text{24}\) plus the value of any outstanding SBA disaster loan received after January 31, 2020, for purposes of refinancing the disaster loan.\(^\text{25}\)

These loans will have a maximum interest rate of 4% with all lender fees, as well as collateral and personal guarantee requirements waived,\(^\text{26}\) and be 100% guaranteed by the SBA.\(^\text{27}\) Lenders are required to defer payments of principal, interest, and fees on these loans for between six months and one year, with the SBA to issue deferment guidance to lenders within 30 days of enactment.\(^\text{28}\)

\(^\text{19}\) H.R. 748, § 1102(a)(2).
\(^\text{20}\) Id.
\(^\text{21}\) Id.
\(^\text{22}\) Id.
\(^\text{23}\) The Paycheck Protection Program includes a detailed definition of “payroll costs” which excludes, among other things, compensation for any individual employee earning over $100,000 in annual salary, as prorated for the period from February 15 to June 30, 2020 and compensation for employees residing outside the United States. Id.
\(^\text{24}\) For seasonal employers: the average total monthly payroll costs for the business during the 12-week period beginning February 15, 2019 or, at the election of the business, March 1, 2019. Id. For businesses not in operation between February 15, 2019 and June 30, 2019: the average total monthly payroll costs for the business between January 1, 2020 and February 29, 2020. Id.
\(^\text{25}\) Id.
\(^\text{26}\) Id.
\(^\text{27}\) Id. § 1102(a)(1)(B).
\(^\text{28}\) Id. § 1102(a)(2).
Businesses may use the borrowed funds not only for standard section 7(a) purposes,²⁹ but also for payroll costs; insurance premiums; costs related to the continuation of healthcare benefits during paid sick, medical, or family leave; employee salaries, commissions, or similar compensations; utility, rent, and mortgage interest payments; and interest on debt obligations incurred before February 15, 2020.³⁰

The Act appropriates $349 billion to the SBA for the cost of guaranteed loans under the Paycheck Protection Program.³¹

**Loan Forgiveness**

The portion of the loan used to cover payroll (not including the compensation for any individual employee above $100,000 on an annual basis, prorated), mortgage interest, rent, or utility costs for the eight-week period beginning on the date the loan is granted is eligible for forgiveness, with the forgiven amount nontaxable.³² This amounts to a giveaway of money by the government to small businesses—the forgiven amount of the loan is considered canceled debt³³ and is excluded from gross income for federal tax purposes.³⁴

In order to incentivize the retention of employees at existing salaries, the amount of forgiveness is reduced by:

i) any reduction in the average number of monthly full-time equivalent (“FTE”) employees during the eight weeks following loan disbursement as compared to the average number of monthly FTE employees during, at the recipient’s election, either the period between February 15 and June 30, 2019 or the period between January 1 and February 29, 2020, with special rules for seasonal employers; and

ii) the amount of any reduction in total salary or wages of any employee during the eight weeks following loan disbursement that is in excess of 25% of that employee’s total salary or wages during their most recent full quarter of employment (excluding employees who received,

²⁹ Traditionally, the proceeds from section 7(a) loans may be used in most instances only for "plant acquisition, construction, conversion, or expansion, including the acquisition of land, material, supplies, equipment, and working capital." 15 U.S.C. § 636(a).
³⁰ H.R. 748, § 1102(a)(2).
³¹ Id. § 1107(a)(1).
³² Id. § 1106(b).
³³ Id. § 1106(c).
³⁴ Id. § 1106(i).
during any single pay period in 2019, wages or salary at an annualized rate of pay of more than $100,000). \(^{35}\)

To encourage businesses to rehire employees and reverse recent salary reductions, these loan forgiveness reductions, with respect to any layoffs or salary cuts made between February 15, 2020 and 30 days after enactment of the Act, will not be applied if the business increases its FTEs and employee salaries by June 30, 2020 to the levels in effect on February 15, 2020. \(^{36}\) Borrowers with tipped employees may receive forgiveness for additional wages paid to them. \(^{37}\)

There are detailed application and documentation requirements for borrowers seeking loan forgiveness, with forgiveness capped at the amount of the loan principal. \(^{38}\)

**Relief for Existing SBA Section 7(a) Borrowers**

The CARES Act also directs the SBA to pay the principal, interest, and associated fees due on all section 7(a) loans that were granted before the date of enactment of the Act, and that are in regular servicing status, for the six-month period beginning on the date that the next payment is due. \(^{39}\) For section 7(a) loans (other than Paycheck Protection Loans created under this Act) that are granted during the first six months after its enactment, the SBA will make these payments for the six-month period beginning on the date the first payment is due. \(^{40}\) The Act appropriates $17 billion to the SBA for these payments. \(^{41}\)

For further discussion of modifications to the section 7(a) loan program, please see Paul, Weiss Client Memorandum, “CARES Act to Expand Access to the SBA Loan Program” (Mar. 26, 2020), available [here].

**Expansion of the SBA’s Economic Injury Disaster Loan Program**

The CARES Act also expands the SBA’s Economic Injury Disaster Loan (“EIDL”) program by relaxing eligibility criteria and increasing funding for EIDL loans through December 31, 2020. \(^{42}\)

\(^{35}\) Id. § 1106(d).

\(^{37}\) Id. § 1106(d)(4).

\(^{38}\) Id. § 1106(d)(1).

\(^{39}\) Id. § 1112(c)(1)(A). For such loans in deferment, the SBA shall make all such payments during the six-month period beginning on the date that the next payment is due after the deferment period ends. Id. § 1112(c)(1)(B).

\(^{40}\) Id. § 1112(a), (c)(1)(C).

\(^{41}\) Id. § 1112(f).

\(^{42}\) Id. § 1110.
Eligibility

The Act provides that, in addition to small business concerns, private nonprofit organizations, and agricultural cooperatives traditionally eligible for EIDLs, individuals operating under a sole proprietorship or as an independent contractor, and businesses, cooperatives, employee stock ownership plans (“ESOPs”), or tribal small business concerns with not more than 500 employees are eligible to apply for EIDLs through December 31, 2020.43 Businesses must have been in operation on January 31, 2020 to be eligible.44

During the operative period, there will be no personal guarantee requirement on all loans up to $200,000, no requirement that applicants be in business for one year prior to the COVID-19 disaster, and no requirement that applicants be “unable to obtain credit elsewhere” to be eligible for EIDLs.45 The SBA may approve applicants during this period based solely on their credit score or on “alternative appropriate methods” of determining their ability to repay.46

EIDL Emergency Grant Advances

Any EIDL applicant during this period may also request that the SBA provide an advance of the requested loan, up to $10,000, within three days of the SBA’s receipt of the applicant’s application.47 In addition to traditionally allowable EIDL purposes, proceeds from these advances can be used to provide COVID-19-related paid sick leave, maintain payroll to retain employees during business disruptions or slowdowns, pay increased costs due to interrupted supply chains, make rent or mortgage payments, and repay obligations that cannot be met due to revenue losses.48 Applicants are not required to repay any portion of this advance, even if they are ultimately denied a loan.49 If an EIDL applicant receives an advance and transfers into or is approved for a SBA section 7(a) loan, the advance will be reduced from the loan forgiveness amount.50 The Act appropriates $10 billion to the SBA for these EIDL emergency advances.51

Small Business Bankruptcy Protections

The CARES Act also modifies the bankruptcy code to provide certain relief to debtors.52 The Act raises the eligibility limit for small business debtor reorganization for debtors engaged in commercial or business activities—including any affiliate that is also a debtor—from $2.7 million to $7.5 million in aggregate

43 Id. § 1110(a) & (b).

noncontingent liquidated secured and unsecured debts, if at least 50% of those debts arose from the debtor’s commercial or business activities.\(^53\) Debtors that are corporations subject to reporting requirements under sections 3 or 15(d) of the Securities Exchange Act of 1934\(^54\) or that are affiliates of an issuer, as defined in section 3 of the 1934 Act,\(^55\) generally do not qualify for small business debtor reorganization.\(^56\)

The Act also revises the bankruptcy code to clarify that payments made under federal law relating to the COVID-19 emergency shall be excluded from definitions of current monthly income and disposable income.\(^57\) Additionally, Chapter 13 reorganization plans confirmed before the enactment of this Act may be modified upon the request of such a debtor who “has experienced a material financial hardship due” to the COVID-19 emergency.\(^58\) These forms of relief will be in effect for one year after the date of enactment of the CARES Act.\(^59\)

### III. Financial Assistance for Certain Affected Industries and Other Companies

**Coronavirus Economic Stabilization Act of 2020**

The CARES Act includes the Coronavirus Economic Stabilization Act of 2020 (the “CESA”), which appropriates $500 billion dollars and enacts other measures to provide liquidity to eligible businesses that are suffering as a direct result of the COVID-19 emergency.\(^60\)

**Direct Loans, Loan Guarantees, and Investments in Credit Facilities to Provide Liquidity**

The CESA authorizes the U.S. Department of the Treasury (the “Treasury”) to provide up to $25 billion in loans or loan guarantees to commercial airlines, ticket agents, and businesses that perform aircraft maintenance inspection services, $4 billion in loans or loan guarantees to cargo air carriers, and $17 billion in loans and loan guarantees to businesses critical to maintaining national security.\(^61\) Treasury is also authorized to provide $454 billion (plus any amount of funding that is not provided to the airline or national security industries) in loans, loan guarantees and other investments to support credit facilities established by the Federal Reserve that will provide liquidity to the financial system and facilitate lending to eligible businesses, states, or municipalities.\(^62\) The credit facilities established by the Federal Reserve are permitted

\(^{53}\) Id. § 1113(a)(1).

\(^{54}\) 15 U.S.C. §§ 78m, 78o(d).

\(^{55}\) Id. § 78(c).

\(^{56}\) H.R. 748, § 1113(a)(1).

\(^{57}\) Id. § 1113(b)(1)(A)–(B).

\(^{58}\) Id. § 1113(b)(1)(C).

\(^{59}\) Id. § 1113(b).

\(^{60}\) Id. § 4003(a).

\(^{61}\) Id. § 4003(b)(1)–(3).

\(^{62}\) Id. § 4003(b)(4).
to purchase corporate, state, and municipal bonds either directly from the issuer or in the secondary market, or make direct loans to eligible businesses. A business is eligible to receive financial support under the CESA if it is created or organized under the laws of the United States, and has “significant operations” and a majority of its employees based in the United States.

The CESA provides that Treasury and the Federal Reserve should endeavor to create a program or facility that provides special assistance to U.S.-based mid-size businesses and non-profit organizations with between 500 and 10,000 employees. This program or facility should provide financing to banks and other lenders that make direct loans to mid-size businesses with an interest rate no greater than two percent, and have no principal or interest amount payable within the first six months after a loan is made. Mid-size businesses who receive these loans are required to make a good-faith certification that, among other things, the uncertainty of the current economic environment makes the loan necessary to maintain its ongoing operations, that it will use the funds to retain at least 90% of its workforce at full compensation until September 30, 2020, and it will not outsource or offshore jobs until two years after completing repayment of the loan.

Treasury has discretion as to the form, terms and conditions, covenants, and requirements of the loans, guarantees, and investments. Recipients of any loans or guarantees under the CESA are prohibited from repurchasing any outstanding equity interests until one year after the loan is no longer outstanding, except to the extent required under a pre-existing contractual obligation. Recipients are also not permitted to pay dividends on any outstanding common stock until one year after the loan or loan guarantee is fully repaid. These loans, guarantees, and investments may be made by Treasury until December 31, 2020.

Treasury is authorized to provide the aforementioned loans and guarantees to eligible aviation and national security businesses if it determines that: (i) credit is not reasonably available; (ii) the intended obligation is “prudently incurred”; and (iii) the loan is “sufficiently secured” or is made at an interest rate that reflects the risk of the loan. To receive a loan or guarantee, the company must have incurred, or expect to incur, business losses related to the coronavirus pandemic that would jeopardize its continued operations.

73 Id. § 4003(c)(2).
74 Id.
Recipients of these loans and guarantees are required, to the extent practicable, to maintain existing employment levels until September 30, 2020, and cannot reduce its employment levels by more than 10 percent. 75 Treasury must also enter into contracts with loan recipients to ensure that the federal government receives equity interests, warrants, or senior debt instruments of the loan recipient. 76 These loans and guarantees may not exceed five years. 77

To receive a loan or guarantee, businesses must enter into a legally binding agreement with Treasury under which, until one year after the loan or guarantee is no longer outstanding, no officer or employee whose total compensation exceeded $425,000 in calendar year 2019 will receive: (i) total compensation during any twelve-month period that exceeds the officer’s or employee’s 2019 total compensation; or (ii) termination or severance benefits which exceeds twice the maximum of the officer’s or employee’s 2019 total compensation. 78 For officers or employees whose total compensation exceeds $3 million, compensation will be capped at the sum of: (i) $3 million and (ii) 50% of the excess over $3 million that the officer or employee received in 2019. 79 The CESA also authorizes the U.S. Department of Transportation (“DOT”) to require any airline receiving loans or guarantees to maintain certain scheduled air transportation services as deemed necessary by the DOT. 80 It also suspends certain excise taxes related to air travel from the date the CARES Act is enacted until December 31, 2020. 81

The CESA also has a “conflict of interest” provision, which prohibits a business from receiving funding under the Act when at least 20% of its outstanding stock is owned by the President, Vice President, an Executive Department head, a member of Congress, or any such individual’s immediate family member. 82

Oversight of Distribution of Funds

The loans, guarantees and investments made under the CESA will be monitored by a newly-created Special Inspector General for Pandemic Recovery. 83 The Special Inspector General will have the authority to conduct investigations and audits related to the making, purchase, management and sale of any loans, guarantees, or investments made by Treasury. 84 The Special Inspector General is required to keep Congress informed through quarterly reports that provide the details of all loans, guarantees, and other investments that have been made. 85 Similarly, the Act establishes a Congressional Oversight Commission to conduct

oversight of the implementation of the CESA by Treasury and the Federal Reserve.\textsuperscript{86} The Oversight Commission is authorized to hold hearings, take testimony, and receive information from any federal department or agency it deems necessary.\textsuperscript{87}

**Temporary Regulatory Modifications Financial Institutions**

The CESA provides temporary modifications to certain regulations governing financial institutions. It provides the FDIC with additional authority to guarantee non-interest bearing transaction accounts and establish a debt guarantee program to guarantee debt of solvent insured depositories, from the date the CARES Act is enacted until December 31, 2020.\textsuperscript{88} It similarly allows the National Credit Union Administration to increase share insurance coverage on non-interest-bearing accounts at federally insured credit unions and provides measures to enable credit unions to gain extensions of credit more easily.\textsuperscript{89} It also institutes measures intended to provide temporary relief for community banks by setting the capital leverage ratio for community banks to eight percent and providing banks that fall under this ratio a grace period to satisfy the ratio requirement.\textsuperscript{90}

The Act also permits financial institutions to suspend application of the Generally Accepted Accounting Principles ("GAAP") for COVID-19-related loan modifications that would otherwise be categorized as a "troubled debt restructuring" and suspends any determination of a loan modified as a result of COVID-19 as being a "troubled debt restructuring."\textsuperscript{91} Additionally, it provides financial institutions with relief from compliance with the Federal Accounting Standards Board’s Current Expected Credit Losses accounting standard until December 31, 2020 or the termination of the declaration of the national emergency related to COVID-19.\textsuperscript{92}

**Providing Relief to Air Carrier Workers**

The CARES Act seeks to preserve aviation jobs and compensate air industry workers during the Coronavirus pandemic. The Act enables the Department of Treasury to provide financial assistance that is to be exclusively used for the payment of employee wages, salaries and benefits of passenger air carriers, cargo air carriers and contractors.\textsuperscript{93} The Act allocates $32 billion for carrying out this financial assistance.\textsuperscript{94} The

\textsuperscript{86} Id. § 4020(a) & (b).
\textsuperscript{87} Id. § 4020(e).
\textsuperscript{88} Id. § 4008(a).
\textsuperscript{89} Id. §§ 4008(b), 4016.
\textsuperscript{90} Id. § 4012(b).
\textsuperscript{91} Id. § 4013(a)–(c).
\textsuperscript{92} Id. § 4014(b).
\textsuperscript{93} Id. § 4112.
\textsuperscript{94} Id. § 4120(a). Up to $25 billion can be given to passenger carriers, up to $4 billion may be given to cargo air carriers and up to $3 billion may be given to contractors. The Secretary is permitted to use $100 million of the allocated funds for other costs and administrative expenses associated with providing financial relief under the Act. Id. § 4112(a) & (b).
Act provides financial assistance equaling the amount air carriers and contractors paid out in wages, salary and benefits during the period of April 1, 2019 to September 30, 2019. The Treasury will certify these amounts based on reporting they received in 2019 and in some cases, financial statements or other appropriate data furnished by the air carrier or contractor seeking financial assistance.

The Treasury has the discretion to determine the terms and conditions as well as the form in which an air carrier or contractor is to be provided with financial assistance under this provision. Financial assistance may be conditioned on continuation of air transportation services and, in making this determination, the Department of Transportation must take into consideration the air transportation needs of small and remote communities as well as the need to maintain well-functioning health care supply chains. In order to be eligible for financial assistance, an air carrier or contractor must enter into an agreement with the Treasury that places limitations on trading in air carrier or contractor securities, paying dividends on air carrier or contractor securities, and conducting involuntary furloughs or enact pay reductions, for a certain time period. Additionally, air carriers and contractors that receive financial assistance under this provision must agree that they will not use aid to compensate officers and employees above a certain compensation threshold.

The Treasury may receive financial instruments issued by recipients of financial assistance as compensation for providing such assistance. The Treasury may not condition financial assistance on whether an air carrier or contractor enters into a collective bargaining agreement with a certified bargaining representative.

**Residential Mortgage Loan Protections under the CESA**

The CESA portion of the CARES Act provides a right to forbearance on residential loans and restrictions on loan servicers and lessors as follows:

- **Right to a forbearance for individuals.** The CESA provides borrowers the right to a forbearance of 180 days on federally-backed mortgage loans, with one 180-day extension period. In order to qualify for a forbearance, the borrower must submit a request to their loan servicer and affirm

---

95 Id. § 4113(a); see also 14 U.S.C. § 241.
96 H.R. 748, § 4113. These certifications will be audited by the Inspector General of the Department of the Treasury.
97 Id. The Secretary is authorized to set requirements for audits and claw backs of financial assistance if the air carriers or contractors fail to honor assurances.
98 Id. § 4114(b). This authority will expire on March 1, 2022.
99 Id. § 4114(a).
100 Id. § 4116(a).
101 Id. § 4117.
102 Id. § 4115; see also 45 U.S.C. 151. This provision shall remain in effect until September 30, 2020.
103 H.R. 748, § 4022(b)(1).
that they are experiencing a financial hardship due to COVID-19. If the borrower qualifies, their mortgage loan servicer must grant their request.

- **Qualifying loans**: To qualify for forbearance under the Act, a loan must be secured by a first or subordinate lien on residential real property designed principally for occupation by one to four families and must satisfy one of the following:
  - insured by the Federal Housing Administration;
  - insured under section 255 of the National Housing Act;
  - guaranteed under section 184 or 184A of the Housing and Community Development Act of 1992;
  - guaranteed or insured by the Department of Veterans Affairs or the Department of Agriculture;
  - made by the Department of Agriculture; or
  - purchased or securitized by the Federal Home Loan Mortgage Corporation or the Federal National Mortgage Association.

- **No additional fees or interest**: The Act requires that mortgage loan servicers provide such forbearances without any additional payment, interest, penalty or requirement of information beyond the borrower’s affirmation of financial hardship. During the forbearance period and any subsequent extension periods, no interest, penalties or fees may accrue beyond those which would accrue normally, as if all payments were made fully and on time.

- **Moratorium on foreclosures**: Under the CESA, a servicer may not initiate any judicial or non-judicial foreclosure process or execute a foreclosure-related eviction or foreclosure sale for at least the 60 day period beginning on March 18, 2020.

- **Right to a forbearance for multifamily borrowers**: The CESA provides multifamily borrowers with federally-back loans covering properties principally designed for occupation by five or more families that were current on their payments as of February 1, 2020 the right to a forbearance of 30 days, with up to two additional 30 day extensions. Such a borrower must affirm that they are

experiencing a financial hardship due to COVID-19.\textsuperscript{111} The servicer must then document the affirmation and provide the forbearance as requested.\textsuperscript{112}

- **Restrictions on multifamily borrowers:** A multifamily borrower may not, for the duration of such a forbearance, evict or initiate eviction of any tenant in the applicable property for reason of nonpayment or charge any late fees or penalties for late payment of rent.\textsuperscript{113} They also may not require a tenant to vacate during the forbearance period or without 30 days’ notice.\textsuperscript{114}

- **Moratorium on evictions:** The CESA provides for a 120-day moratorium on eviction filings from the date of the enactment of the CARES Act.\textsuperscript{115} This moratorium covers lessors of dwellings inhabited pursuant to a residential lease, servicers of federally-back mortgage loans and lessors of any dwellings covered by the Violence Against Women Act of 1994 or the rural housing voucher program of the Housing Act of 1949.\textsuperscript{116} Such lessors are restricted from requiring tenants to vacate during the 120-day moratorium period and must provide 30 days’ notice to any tenant required to vacate after that period ends.\textsuperscript{117}

### IV. Financial Assistance and Other Benefits for Individual Taxpayers

**Cash and Tax Benefits**

The CARES Act includes a number of provisions designed to provide cash and other tax benefits to individual taxpayers, including:

- **Tax rebates:** The Act provides a 2020 tax credit to eligible individual taxpayers in the amount of $1,200 for individuals or $2,400 for individuals filing jointly, plus an additional $500 for each qualifying child of the taxpayer.\textsuperscript{118} Each individual that would have been eligible for this credit in the 2019 tax year (or 2018 if no return was filed for 2019) is to be treated as having paid a tax in the amount of the credit, and therefore will be entitled to a refund.\textsuperscript{119} The total amount to be received by a taxpayer will phased out based on certain income thresholds, zeroing out for taxpayers making more than $99,000 ($198,000 in the case of a joint return).\textsuperscript{120}

\textsuperscript{111} Id. § 4023(b).
\textsuperscript{112} Id. § 4024(c).

\textsuperscript{118} Id. § 2201(a).
\textsuperscript{119} Id.
\textsuperscript{120} Id.
• **Unemployment insurance benefits:** The Act provides unemployment benefits to individuals who are not traditionally eligible for unemployment benefits, who are unemployed or unable to work due to the COVID-19 emergency.\(^{121}\) It provides otherwise eligible individuals an additional $600 per week for up to four months and 100% funding of the first week of regular unemployment for states with no waiting period.\(^{122}\)

• **Modifications to rules concerning retirement funds, plans, and accounts:** The Act temporarily removes the 10% additional tax normally imposed on early withdrawals from retirement funds under Internal Revenue Code § 72(t) for qualified “coronavirus-related distributions,” which are defined as any distributions, up to a maximum of $100,000 per taxable year, from an eligible retirement plan by an individual: (i) who has been diagnosed with SARS-CoV-2 or COVID-19, whose spouse has been diagnosed with SARS-CoV-2 or COVID-19, or who is suffering adverse financial or employment consequences due to SARS-CoV-2 or COVID-19.\(^{123}\) Loans made from such retirement accounts during the 180-day period following the enactment of the bill will not be treated as distributions so long as they do not exceed $100,000.\(^{124}\) The CARES Act also amends section 401(a)(9) of the Internal Revenue Code to provide for a temporary waiver of requirements related to minimum distributions under that section for certain defined contribution plans.\(^{125}\)

• **Charitable contributions:** The CARES Act adds qualified charitable contributions of up to $300 made by an eligible individual during the taxable year (beginning in taxable year 2020) to certain types of recipients—including medical research or educational organizations (such as hospitals)—to the list of “above the line” deductions.\(^{126}\) The Act also temporarily suspends the percentage limitations for qualified contributions to certain types of recipients—including medical research or educational organizations (such as hospitals)—to the list of “above the line” deductions.\(^{127}\)

• **Health services accounts:** The CARES Act amends certain sections of the Internal Revenue Code to clarify that eligibility for the health savings account deduction provided in section 223(c)(2) will not be affected by participation in a telehealth plan.\(^{128}\)

\(^{127}\) Id. § 2205(a).

\(^{128}\) Id. § 3701(a).
Changes to Emergency Leave Benefits through the Families First Coronavirus Response Act and Other Labor Provisions

The CARES Act amends the emergency paid leave provisions of the FFCRA as follows:

- by clarifying that paid leave benefits under the Emergency Family and Medical Leave Expansion Act are capped at $200 per day and $10,000 in the aggregate for each employee, not total;\(^{129}\)

- by capping the paid sick leave benefits available under the Emergency Paid Sick Leave Act at (i) no more than $511 per day and $5,110 in the aggregate for employees who take leave because they are subject to a quarantine order, who have been advised to self-quarantine, or who are experiencing symptoms of COVID-19 and seeking medical attention; and (ii) no more than $200 and $2,000 in the aggregate for employees taking leave to care for an individual subject to a quarantine order or recommendation, or a son or daughter whose school or place of care is closed, or whose caretaker is unavailable due to COVID-19.\(^{130}\)

- by providing the Director of the Office of Management and Budget with the authority to exclude for good cause certain government employees from the provisions of the Emergency Family and Medical Leave Expansion Act and the Emergency Paid Sick Leave Act;\(^{131}\)

- by amending the Emergency Family and Medical Leave Expansion Act to explain that “eligible employees” who may receive benefits are (i) those who have been employed for at least 30 days by the employer from whom leave is sought, including (ii) employees who were laid off after March 1, 2020, who had worked for the employer for 30 of the 60 days prior to being laid off, and were subsequently rehired;\(^{132}\) and

- by amending the FFCRA to provide for advance payment of tax credits against amounts required to be paid by employers under the Act’s emergency leave provisions.\(^{133}\) The due date for minimum contributions for single-employer plan funding under section 430(a) of the Internal Revenue Code of 1986 and section 303(a) of ERISA in the year 2020 is extended to January 1, 2021, with accruing interest.\(^{134}\)

---

\(^{131}\) Id. § 3604(a).

\(^{132}\) Id. § 3605.

\(^{133}\) Id. § 3606(a).

\(^{134}\) Id. § 3608(a).
Funds made available by this Act may also be used by an agency to modify contracts in order to reimburse minimum contract billing rates.\textsuperscript{135} This only applies to contractors who cannot perform work approved by the Federal government, but that has been impeded by the COVID-19 emergency, and the reimbursements are not to exceed an average of 40 hours per week beyond September 30, 2020.\textsuperscript{136}

**COVID-19 Pandemic Education Relief Act of 2020**

The CARES Act includes the Pandemic Education Relief Act of 2020 (“Education Relief Act”), which provides assistance to students and institutions of higher education impacted by the COVID-19 public health emergency, and temporarily suspends student loan payments and interest on student loans for borrowers.\textsuperscript{137} Most notably:

- payments for all loans held by the Department of Education and made under Part D of Title IV of the Higher Education Act of 1965 (including the federal Direct Loan and Perkins Loan programs) are suspended through September 30, 2020; and

- interest on such loans will not accrue during the suspension period, including involuntary payments.\textsuperscript{138}

The Education Relief Act also relaxes restrictions on the use of federal educational aid funds to allow institutions of higher education to provide additional financial assistance to students affected by the COVID-19 emergency, including through work-study funding.\textsuperscript{139}

**V. Healthcare Response to COVID-19**

**Addressing Supply Shortages**

The CARES Act includes a number of provisions designed to mitigate supply shortages for both drugs and medical devices, including:

- **Expedited review of critical drugs and medical devices:** The Act enables the Secretary of HHS to prioritize and expedite review of new devices and drugs and re-inspection of established devices and drugs if HHS determines that there is, or is likely to be, a shortage of devices or drugs that are life-supporting, life sustaining, or critical to the public health during a public health emergency.\textsuperscript{140}

\textsuperscript{139} H.R. 748, §§ 3503, 3505, 3517–3518.

\textsuperscript{140} Id. § 3111; 21 U.S.C. § 356c(g).
• **Reporting requirements for manufacturers of critical drugs and medical devices:** The Act requires manufacturers of certain drugs and medical devices that are critical to public health during a public health emergency to notify the U.S. Department of Health and Human Services (“HHS”) of any permanent discontinuance or interruption in manufacture of the device or an active pharmaceutical ingredient that will likely lead to meaningful disruption in the supply of the drug or device in the United States. Device manufacturers must generally report anticipated discontinuances or disruptions at least six months prior to the discontinuance or interruption, or as soon as practicable thereafter.\(^{141}\)

• **Annual reporting requirements for drug manufacturers:** The Act requires each person registered with HHS as a manufacturer of a drug to report annually to the Secretary of HHS the amount of each drug it manufactured, prepared, propagated, compounded or processed for commercial distribution. HHS has the authority to exempt certain biological products from these reporting requirements if he determines that reporting would not be necessary to protect the public health.\(^{142}\)

• **Risk management plans:** The Act requires manufacturers of critical drugs, pharmaceutical ingredients, and any associated medical devices to develop and enact risk management plans that identify and evaluate risks to the supply of a drug or active pharmaceutical ingredient.\(^{143}\)

• **Immunity from suit for “covered persons” under the Public Health Service Act:** The Strategic National Stockpile provisions in the Public Health Service Act provide immunity from suit and liability to “covered persons,” including the United States and certain manufacturers and distributors, for claims arising out of the administration of “covered countermeasure[s].” Prior to the passage of the CARES Act, “covered countermeasures” included certain pandemic or epidemic products, security measures, drugs, and biological products for emergency use. The Act amends the definition of “covered countermeasures” to also include certain respiratory protective devices.\(^{144}\)

### Increasing Access to Health Care

With respect to private healthcare plans, the Act amends the Families First Coronavirus Response Act’s (“FFCRA”) no-cost COVID-19 testing requirements and requires no-cost immunization.\(^{145}\) Additionally, the Act provides for certain liability protections for healthcare providers who volunteer during the public

health emergency and adds certain patient record confidentiality requirements. Lastly, the Act appropriates $2.54 billion for community health centers and certain telehealth and rural healthcare programs.

- **Expanded private plan coverage for no-cost COVID-19 testing:** The Act expands the FFCRA’s no-cost testing requirements for group health plans or health insurance issuers offering group or individual health insurance (“private healthcare plans”) to include not only FDA-approved tests for COVID-19, but also: (i) tests for which the developer has requested or intends to request emergency use authorization under section 564 of the Federal Food, Drug, and Cosmetic Act; (ii) state-developed labs; and (iii) any other test that the HHS determines is appropriate in guidance.\(^{146}\) Consistent with the FFCRA’s no-cost testing requirements, coverage of these added categories of COVID-19 testing is not subject to any deductible, co-pay, or requirement for pre-authorization and is applicable for the duration of the COVID-19 public health emergency period from the date the Act is enacted.\(^{147}\) The CARES Act requires private healthcare plans to reimburse the provider of COVID-19 diagnostic testing at the negotiated rate in effect prior to the COVID-19 public health emergency.\(^{148}\) If no negotiated rate is in place with the applicable provider, the reimbursement must be the cash price of the service published on the provider’s public website, on which providers must publicize the price during the COVID-19 public health emergency.\(^{149}\)

- **Private plan coverage for no-cost COVID-19 preventative care:** Group health plans and health insurance issuers offering group or individual health insurance must cover on a permanent basis, at no cost to covered individuals, any “qualifying coronavirus preventative service,” defined as any item, service or immunization to prevent or mitigate a coronavirus disease that is (i) an item or service that is evidence-based and rated A or B under a U.S. Preventative Services Task Force recommendation or (ii) any immunization recommended by the U.S. Centers for Disease Control and Prevention for the individual involved.\(^{150}\) Coverage for immunizations will begin 15 business days after the applicable recommendation of an item, service, or immunization is issued.\(^{151}\)

- **Liability limitations for volunteer healthcare providers:** The Act limits federal and state law liability for licensed, registered, or certified health care professionals who volunteer during the public health emergency.\(^{152}\) The liability limitation applies to acts or omissions in providing services relating to the diagnosis, prevention, or treatment of COVID-19 or the assessment or care of the health of a human being related to an actual or suspected case of COVID-19, where such services are within the scope of the volunteer’s license, registration, or certification and are provided with a

good faith belief that the treated individual requires health care services.\textsuperscript{153} The liability limitations are subject to exceptions for harm resulting from willful or criminal misconduct or gross negligence, and are applicable to covered healthcare services rendered from the enactment of the Act until the end of the COVID-19 public health emergency.\textsuperscript{154}.

- **Confidentiality for patient records:** The CARES Act also requires HHS to issue guidance on sharing protected patient information and compliance with HIPAA during the public health emergency period.\textsuperscript{155} Separately, the Act addresses confidentiality requirements in connection with medical information for patients with a substance abuse disorder.\textsuperscript{156}

- **Support for health care and other programs:** The Act provides for $1.32 billion for fiscal year 2020 for federal loan guarantees to community health centers serving medically underserved populations for detecting, preventing, diagnosing and treating COVID-19. The Act also provides, in each of fiscal years 2021 through 2025: $29 million for telehealth projects for rural and medically underserved areas; $79.5 million for rural health and small health care provider quality improvement grant programs; and $125.5 million for the Healthy Start program.

### Regulation of Nonprescription Drugs

The CARES Act amends the Federal Food, Drug, and Cosmetic Act\textsuperscript{157} ("FDCA") to include new regulations for certain nonprescription drugs marketed without an approved drug application.\textsuperscript{158} The Act provides the procedures by which HHS may issue administrative orders about requirements for various drugs on the market as well as the procedures for formal adjudication of decisions regarding various drug requirements. These procedures include the following:

- The new regulations permit certain drugs or combinations of drugs not to require approval under section 505 of the FDCA. These drugs include, among other things, drugs that the HHS determines are in conformity with the requirements for nonprescription use of a final monograph, are marketed in conformity with an administrative order determining that it is generally recognized as safe and does not require approval, or meet the general requirements for nonprescription drugs.\textsuperscript{159}

\textsuperscript{153} Id. § 3215(a) & (c).
\textsuperscript{154} Id. § 3215(b), (e) & (f).
\textsuperscript{155} Id. § 3224.
\textsuperscript{156} Id. § 3221.
\textsuperscript{157} 21 U.S.C. § 355g.
\textsuperscript{158} H.R. 748, § 3851(a).
\textsuperscript{159} Id.
The CARES Act also provides expedited procedures for administrative orders issued by HHS regarding drugs that pose an imminent hazard to public health.\textsuperscript{160} Expedited procedures for such administrative orders are also available when a change in the labeling of a drug—such as new warnings or other information required for the safe use of the drug—is reasonably expected to mitigate a serious or unreasonable risk of adverse events associated with the use of the drug.\textsuperscript{161} In such cases, HHS may issue an interim final administrative order and need only make reasonable efforts to notify sponsors who have a listing for the drug at issue not later than 48 hours before the issuance of the order.\textsuperscript{162}

The CARES Act amends the procedures for filing a request that a non-preservation drug is generally recognized as safe and effective.\textsuperscript{163} In response to a such a request for nonprescription drugs that contain an active ingredient not previously incorporated in certain drugs, HHS may: (i) file such request if the request includes specified information demonstrating prima facie safe nonprescription marketing and use of such drug; or (ii) may refuse to file such request and require that nonprescription marketing of the drug be pursuant to a new drug application.\textsuperscript{164}

The CARES Act also provides that an administrative order issued by HHS may include packaging requirements to encourage use in accordance with labeling, including unit dose packaging, requirements for products intended for pediatric use and other appropriate requirements.\textsuperscript{165}

Minor changes in the dosage form of a drug may be made by a requestor without the issuance of an order if the requestor shows that the change: (i) will not affect the safety or effectiveness of the drug; (ii) will not materially affect the extent of absorption or other exposure to the active ingredient in comparison to a suitable reference product; and (iii) the change is in conformity with the requirements of an applicable administrative order issued by HHS.\textsuperscript{166} A sponsor who makes a change to a drug subject to this provision must submit updated drug listing information with the drug in accordance with section 510(j) before the drug is first commercially marketed.\textsuperscript{167}

**Drug Innovations to Combat Infectious Disease**

The Public Health Service Act mandates that HHS develop a strategic plan to integrate biodefense and emerging infectious disease requirements with advanced research and development, strategic initiatives,
and the procurement of qualified countermeasures and pandemic products.\footnote{168} The CARES Act provides that, to the maximum extent possible, HHS shall use competitive procedures when entering into transactions to carry out projects under the strategic plan that are related to a public health emergency.\footnote{169}

Under the CARES Act, HHS may also expedite the review and development of a new drug if the evidence suggests that the drug, either alone or in combination with other drugs, has the potential to prevent or treat a disease that is transmitted from animals to humans and has the potential to cause serious adverse health consequences for, or serious or life-threatening diseases in, humans.\footnote{170}

**Amendments to the Social Security Act**

The CARES Act amends the Social Security Act by, among other things, easing the face-to-face meeting requirements between Medicare/Medicaid recipients and their medical care providers, which were previously necessary for the medical care providers to receive payment.\footnote{171}

We will continue to monitor developments and keep clients apprised of pertinent information.

SEC Extends Conditional Reporting Relief; CorpFin StaffIssues COVID-19 Disclosure Guidance

The SEC, in its ongoing effort to assist reporting companies and other market participants in meeting their reporting and other obligations under the federal securities laws, announced yesterday that it was extending the conditional relief granted on March 4, 2020 (the “Original Order”) in respect of certain SEC filing obligations (press release available here). The extension is set forth in an order (the “Updated Order”) (available here) that supersedes the Original Order. Concurrently, the Staff of the Division of Corporation Finance (the “Staff”) issued CF Disclosure Guidance Topic No. 9 (“CF-9”) (available here) setting forth its views regarding disclosure and securities law obligations that reporting companies should consider in respect of COVID-19 and related business and market disruptions.

The Updated Order

The Updated Order provides reporting companies and others with SEC filing obligations with a 45-day extension to file reports1 that otherwise would have been due between March 1 and July 1, 2020. The Original Order covered reports that would have been due between March 1 and April 30. Like the Original Order, the Updated Order requires any reporting company seeking to rely on the conditional relief to furnish a Form 8-K or, in the case of a foreign private issuer, a Form 6-K by the later of March 16 and the original filing deadline for the report:

- stating that it is relying on the Updated Order;
- providing a brief description of the reasons why it could not file such report, schedule or form on a timely basis;
- stating the estimated date by which the report, schedule or form is expected to be filed; and
- providing a company-specific risk factor or set of risk factors explaining the impact, if material, of COVID-19 on its business.

If the reason the subject report cannot be filed timely relates to the inability of any person, other than the reporting company, to furnish any required opinion, report or certification, the Form 8-K or Form 6-K is to

---

1 The Original Order and the Updated Order cover materials (and amendments thereto) required by Sections 13(a), 13(f), 13(g), 14(a), 14(c), 14(f) and 15(d) and Regulations 13A, 13D-G (except for those provisions mandating the filing of Schedule 13D or amendments to Schedule 13D), 14A, 14C and 15D of the Securities Exchange of 1934, and Rules 13f-1 and 14f-1 thereunder, as applicable.
have attached as an exhibit a statement signed by such person stating the specific reasons why such person is unable to furnish the required opinion, report or certification on or before the date such report must be filed.

A reporting company or any person required to make any SEC filings with respect to such reporting company must file with the SEC any report, schedule or form required to be filed no later than 45 days after the original due date. In any report, schedule or form filed by the applicable extended deadline, the reporting company or such other person must disclose that it is relying on the Updated Order and state the reasons why it could not file such report, schedule or form on a timely basis.

The Updated Order clarifies that a Form 8-K or Form 6-K must be provided for each filing that is delayed.

The Updated Order carries over the same relief as in the Original Order in respect of proxy statements, annual reports and other soliciting materials, as well as information statements, to the extent a good faith effort is made to furnish these materials to security holders located in areas where delivery services of the type customarily used for these documents have been suspended.

As it did on March 4, the Staff indicated it would take the following positions:

- For purposes of eligibility to use Form S-3 or Form F-3 (and for well-known seasoned issuer status, which is based in part on Form S-3 or Form F-3 eligibility), a reporting company relying on the Updated Order will be considered current and timely in its Securities Exchange Act of 1934 (“Exchange Act”) filing requirements if it was current and timely as of the first day of the relief period and it files any report due during the relief period within 45 days of the filing deadline for the report.

- For purposes of the Form S-8 eligibility requirements and the current public information eligibility requirements of Rule 144(c), a reporting company relying on the Updated Order will be considered current in its Exchange Act filing requirements if it was current as of the first day of the relief period and it files any report due during the relief period within 45 days of the filing deadline for the report.

- Reporting companies will be permitted to rely on Rule 12b-25 if they are unable to file the required reports on or before the extended due date.

**CF Disclosure Guidance Topic No. 9**

The Staff has issued guidance in light of its view that the effects of COVID-19 and related business and market disruptions on reporting companies, management’s expectations as to future impacts, management’s responses to unfolding events and management’s planning for uncertainties can be material to investment and voting decisions. The Staff notes that its rules are, in effect, principles-based and that, notwithstanding the absence of specific line item requirements, discussion of COVID-19-related matters...
may be necessary or appropriate in the MD&A, the business section, the risk factors, the description of legal proceedings, disclosures relating to disclosure controls and procedures and internal control over financial reporting, and the financial statements.

Disclosures need to be tailored to the specific facts of the reporting company, and they should enable investors to evaluate the current and expected impact of COVID-19 “through the eyes of management.” The Staff encourages reporting companies to proactively revise and update disclosures as facts and circumstances change. The Staff also recognizes that many COVID-19 disclosures will have forward-looking elements that may be based on assumptions and expectations regarding future events.

**Questions to consider**

The Staff offers some questions for reporting companies to consider (as examples):

- How has COVID-19 impacted your financial condition and results of operations? In light of changing trends and the overall economic outlook, how do you expect COVID-19 to impact your future operating results and near- and long-term financial condition? Do you expect that COVID-19 will impact future operations differently than how it affected the current period?

- How has COVID-19 impacted your capital and financial resources, including your overall liquidity position and outlook? Has your cost of, or access to, capital and funding sources, such as revolving credit facilities or other sources, changed, or is it reasonably likely to change? Have your sources or uses of cash otherwise been materially impacted? Is there a material uncertainty about your ongoing ability to meet the covenants in your credit agreements? If a material liquidity deficiency has been identified, what course of action has the company taken or proposed to take to remedy the deficiency?² Do you expect to disclose or incur any material COVID-19-related contingencies?

- How do you expect COVID-19 to affect assets on your balance sheet and your ability to timely account for those assets? For example, will there be significant changes in judgments in determining the fair-value of assets measured in accordance with U.S. GAAP or IFRS?

- Do you anticipate any material impairments (e.g., with respect to goodwill, intangible assets, long-lived assets, right of use assets or investment securities), increases in allowances for credit losses,

² The Staff suggests that reporting companies consider the requirement to disclose known trends and uncertainties as they relate to the ability to service debt or other financial obligations, access the debt markets, including commercial paper or other short-term financing arrangements, maturity mismatches between borrowing sources and the assets funded by those sources, changes in terms requested by counterparties, changes in the valuation of collateral, and counterparty or customer risk. See prior SEC guidance (available [here](#)).
restructuring charges, other expenses, or changes in accounting judgments that have had or are reasonably likely to have a material impact on your financial statements?

- Have COVID-19-related circumstances, such as remote work arrangements, adversely affected your ability to maintain operations, including financial reporting systems, internal control over financial reporting and disclosure controls and procedures? If so, what changes in your controls have occurred during the current period that materially affect or are reasonably likely to materially affect your internal control over financial reporting? What challenges do you anticipate in your ability to maintain these systems and controls?

- Have you experienced challenges in implementing your business continuity plans or do you foresee requiring material expenditures to do so? Do you face any material resource constraints in implementing these plans?

- Do you expect COVID-19 to materially affect the demand for your products or services?

- Do you anticipate a material adverse impact of COVID-19 on your supply chain or the methods used to distribute your products or services? Do you expect the anticipated impact of COVID-19 to materially change the relationship between costs and revenues?

- Will your operations be materially impacted by any constraints or other impacts on your human capital resources and productivity?

- Are travel restrictions and border closures expected to have a material impact on your ability to operate and achieve your business goals?

**Reporting considerations**

The Staff encourages reporting companies to proactively address financial reporting matters earlier than usual. The Staff cites the example of needing to consult with experts to determine how the evolving COVID-19 situation may impact assets, including impairment of goodwill or other assets.

The Staff also reminds reporting companies of their obligations in respect of non-GAAP/IFRS financial measures as well as the SEC’s recent guidance relating to disclosures of performance metrics (available [here](#)). The Staff notes that, to the extent a reporting company presents a non-GAAP/IFRS financial measure or performance metric to adjust for or explain the impact of COVID-19, or changes the method by which it calculates a metric as a result of COVID-19, it would be appropriate to highlight why management finds the measure or metric useful and how it helps investors assess the impact of COVID-19 on the reporting company’s financial position and results of operations.
Where GAAP/IFRS financial measures are not yet available at the time of an earnings release, the Staff has indicated that it would not object to reporting companies reconciling a non-GAAP/IFRS financial measure to preliminary GAAP/IFRS results that either include provisional amount(s) based on a reasonable estimate, or a range of reasonably estimable GAAP/IFRS results. The Staff notes that this accommodation reflects the view that non-GAAP/IFRS financial measures and performance metrics can be a useful way for management to share with the market how it and the board of directors are assessing the current and potential impact of COVID-19 on operating results and financial condition.

The Staff cautions that, if a reporting company presents non-GAAP/IFRS financial measures that are reconciled to provisional amount(s) or an estimated range of GAAP/IFRS financial measures in reliance on its accommodation, management should limit the measures in its presentation to those non-GAAP/IFRS financial measures it is using to report financial results to the board of directors. If a reporting company presents non-GAAP/IFRS financial measures that are reconciled to provisional amount(s) or an estimated range of GAAP/IFRS financial measures, it should explain, to the extent practicable, why the line item(s) or accounting is incomplete, and what additional information or analysis may be needed to complete the accounting.

**Other Reminders**

In yesterday’s press release, the SEC and, in the CF-9 guidance, the Staff:

- Reminded reporting companies encountering administrative difficulties in the SEC filing process to contact the Staff, which will continue to address these and any other COVID-19-related issues on a case-by-case basis. Persons requiring general assistance can call +1 202 551-3500 or submit a request online (link available here). The Contact Information sheet (available here) is a useful guide as to whom to contact at the Staff with questions. Requests for interpretations or waivers of financial statement requirements can be submitted via email (address: DCAOLetters@sec.gov). Assistance can also be requested via email (address: CFEmergency@sec.gov).

- Encouraged reporting companies to provide current and forward-looking information to the market and reminded reporting companies that they can take steps to avail themselves of the safe harbor for forward-looking statements available under Section 21E of the Exchange Act and Section 27A of the Securities Act of 1933.

---

For example, if a reporting company intends to disclose on an earnings call its EBITDA, it could reconcile that measure to either its GAAP/IFRS earnings, a reasonable estimate of its GAAP/IFRS earnings that includes a provisional amount, or its reasonable estimate of a range of GAAP/IFRS earnings. The provisional amount or range should reflect a reasonable estimate of COVID-19-related charges not yet finalized, such as impairment charges.
Reminded reporting companies to take steps necessary to avoid selective disclosure and to disseminate material information related to the impact of COVID-19 broadly.

Reminded reporting companies that, depending on their particular circumstances, they should consider whether they need to revisit, refresh and update previous disclosures to the extent that the information has become materially inaccurate.

Reminded reporting companies and their insiders to consider their respective activities in light of their disclosure obligations under the federal securities laws. Where the reporting company has become aware of material risks relating to COVID-19 that have not yet been disclosed to the market, it should refrain from trading and should discourage officers, directors and other insiders who are aware of the relevant matters from trading until the market is adequately informed about the material risks.

Reminded all that health and safety are the first priority and should not be compromised to meet SEC reporting requirements.

COVID-19 UPDATE: SEC Extends Relief to Form ADV and Form PF Filing and Delivery Obligations Due On or Before June 30

The SEC has issued a Superseding Order extending relief to Form ADV and Form PF filing and delivery obligations, as applicable, for which the original due date is between March 13, 2020 and June 30, 2020. (The SEC’s Original Order applied to filing and delivery requirements due on or before April 30, 2020.) As before, the Superseding Order provides a 45-day extension to file or deliver, as applicable, an annual amendment to Form ADV and Form PF for investment advisers who are unable to meet a filing deadline or delivery requirement due to circumstances related to current or potential effects of coronavirus (COVID-19) (e.g., disruptions to transportation and the imposition of quarantines, which may limit investment advisers’ access to facilities, personnel and third party service providers).

An investment adviser must still notify the SEC via email that it is relying on the Superseding Order, but it will no longer need to describe why it is relying on the Superseding Order or estimate a date by which it expects to file or deliver such form. With respect to the filing of Form ADV or delivery of a brochure, summary of material changes, or brochure supplement, an investment adviser must disclose that it is relying on the Superseding Order on its public website (or if it does not have a public website, promptly notify its clients and/or private fund investors). The SEC may provide additional extensions or relief as circumstances warrant.

CARES Act to Expand Access to the SBA Loan Program

Late Wednesday night, the Senate unanimously passed the Coronavirus Aid, Relief, and Economic Security Act (the “CARES Act” or the “Act”). The Act, which now moves to the House for approval, is intended in part to help individuals and small businesses navigate the economic difficulties brought on by COVID-19. In Section 1102 of the Act, the legislation provides for a new Small Business Act (“SBA”) § 7(a) loan program, which offers forgivable loans and waives certain affiliate aggregation requirements maintained by other SBA programs. These new provisions have been of particular interest to private equity firms. We will shortly be issuing a memo more fully describing the Act.

Forgivable Loans Under the Paycheck Protection Program

Paycheck Protection Program (Section 1102 of the CARES Act)

Section 1102 of the CARES Act would amend the § 7(a) loan program to include a new loan offering called the Paycheck Protection Program (the “Program”). Key features of the Program include:

- Increased loan eligibility for certain small businesses and organizations. From February 15, 2020 through June 30, 2020 (the “covered period”), in addition to small business concerns, any business concern, nonprofit organization, or veterans organization would be eligible to receive a loan under the Program (a “covered loan”) if it employs not more than the greater of:
  - 500 employees; or
  - If applicable, the size standard in number of employees for its industry established by the Small Business Administration.

- Waiver of affiliation rules. Under existing SBA legislation, applicant business concerns with affiliates are generally subject to affiliate aggregation requirements under section 121.103 of title 13, Code of Federal Regulations (“13 CFR § 121.103”). The Act contains an explicit waiver of these requirements with respect to eligibility for a covered loan for:
  - Any business concern with not more than 500 employees and that is assigned a North American Industry Classification System code beginning with 72 (at the time the loan is disbursed) — this code relates to the accommodation and food service industry;
• Business concerns within this “72 category” that employ not more than 500 employees per individual physical location may also be eligible.

• Any business concern operating as a franchise that is assigned a franchise identifier code by the Administration; and

• Any business concern that receives financial assistance from a company licensed under Section 301 of the Small Business Investment Act of 1958.

• Loan amount tied to payroll costs. The maximum amount of a covered loan would be based on a formula where certain payroll costs are multiplied by 2.5, but in no event would be more than $10,000,000.

• Permitted use. Proceeds of covered loans may be used for payroll, salary, rent, utilities and payment of interest under mortgages and preexisting debt.

Forgiveness of Covered Loans (Section 1106 of the CARES Act)

Under Section 1106 of the CARES Act, a recipient of a covered loan would be eligible to receive forgiveness of a portion of the loan. Section 1106 specifies the following conditions and allowances among others:

• Amount of loan forgiveness. In general, forgiveness is available for a covered loan amount equal to the sum of the following costs and payments incurred during the covered period:

  ▪ Payroll costs (not including costs for compensation above $100,000 annually as prorated for the covered period);

  ▪ Payment of interest on mortgages incurred before February 15, 2020;

  ▪ Payment on rent obligated by a leasing agreement in force prior to February 15, 2020; and

  ▪ Any utility payment for which the utility service began before February 15, 2020.

• Tax Treatment. A covered loan recipient can exclude any canceled indebtedness it receives under Section 1106 from its gross income for the purposes of the Internal Revenue Code of 1986.

• Reductions in the amount of loan forgiveness. Section 1106 provides for a certain reduction in a borrower’s loan forgiveness amount, if the borrower decreases the number of its full-time employees during the covered period (special rules apply for seasonal employers). The amount of loan forgiveness may also be reduced if, during the covered period, the borrower reduces employee compensation for any employee (who did not make more than $100,000 on an annualized basis during 2019) in excess
of 25% of that employee’s compensation during their most recent full quarter as an employee before the covered period.

- Savings clause. Notably, both of these reduction conditions are subject to a savings clause. Specifically, under Section 1106, there would be no reduction in a borrower’s loan forgiveness amount if: (1) the borrower decreased the number of its full-time employees or reduced the compensation of any applicable employee between February 15, 2020 and 30 days after the enactment of the Act, and (2) the borrower eliminates the reduction in the number of its full-time employees or employee compensation before June 30, 2020.

**Implications for Portfolio Companies**

*Current Legal Framework*

Under current law, affiliate aggregation requirements have prevented many portfolio companies from being successful in obtaining § 7(a) loans. Applicant portfolio companies, like any other applicant, have had to meet certain employee size standards designated by the Small Business Administration. While perhaps not always enforced in practice, applicant portfolio companies have been subject to specific affiliate aggregation requirements under 13 CFR § 121.103 (as discussed more generally above). After aggregating their employee numbers with those of other companies in their sponsor’s portfolios, applicant portfolio companies have typically not been able to satisfy their respective employee size standard as set by the Administration.

*Changes under the CARES Act*

The Program allows at least some portfolio companies to obtain a forgivable covered loan without having to meet the affiliate aggregation requirements of 13 CFR § 121.103.

- The meaning of “control” for purposes of determining affiliation is broadly defined in the Act and would likely include the typical ownership structure of a private equity fund.

- The Act waives the affiliate aggregation requirements of 13 CFR § 121.103 for the types of business concerns summarized above. It has been reported that the private equity industry sought a broader waiver and that this was not granted. However, the precise words of the statute could be read to imply that business concerns that qualify for loans based on the expanded eligibility rules described above might not be subject to aggregation requirements. We are in the process of obtaining more information on this point and will circulate an update once we get greater visibility into the finalized Act.

- To the extent aggregation is not required, rather than being assessed together with its affiliated portfolio companies, a company can be assessed individually. In practice, this would greatly relax the eligibility requirements for loans under the SBA.
What’s more, a portfolio company that successfully obtains a loan under the Program is potentially eligible for complete forgiveness of at least a portion of the loan, subject to the conditions of Section 1106.

Under Section 1106, as noted above, the forgiven amount would count as canceled indebtedness and would be excludable from gross income for the purposes of the Internal Revenue Code of 1986.

**Ongoing Updates**

While reports suggest that the House will approve the Act, the lower chamber may seek to make amendments. We will continue to monitor any revisions to the bill and provide our clients with timely information on how the legislation may affect their business.

Antitrust Guidance for Business Collaborations to Combat COVID-19

On March 24, the Federal Trade Commission (FTC) Bureau of Competition and the Department of Justice (DOJ) Antitrust Division issued a Joint Antitrust Statement Regarding COVID-19 providing guidance and expedited procedures for reviewing collaborations between businesses working to advance health and safety during the COVID-19 pandemic. The Joint Statement emphasizes that “there are many ways firms, including competitors, can engage in procompetitive collaboration” without violating the antitrust laws. In light of the pandemic, the agencies have announced an aim to “respond expeditiously to all COVID-19-related requests, and to resolve those addressing public health and safety within seven (7) calendar days of receiving all necessary information.” This provides an opportunity for firms to gain clarity regarding the agencies’ views of business collaborations related to COVID-19, including those involving competitors, on a significantly accelerated timetable.

In this memorandum, we discuss the agencies’ Joint Statement as well as the agencies’ roles with respect to potential collaborations under two relevant federal laws: the Defense Production Act and the Pandemic and All-Hazards Preparedness Act. These laws provide limited antitrust immunity under certain conditions when the federal government is involved in the collaboration.

Guidance

In the Joint Statement, the agencies acknowledge that the unprecedented nature of the COVID-19 pandemic may require competitors to work together to protect public health and safety. While collaborations among competitors can raise serious issues under the antitrust laws, in the Joint Statement the agencies, in line with longstanding guidance, continue to recognize that several types of collaborative activities are generally “consistent with the antitrust laws.” These include various arrangements of particular relevance to the current situation, including: collaboration on research and development, sharing of “technical know-how,” and joint purchasing agreements and other arrangements among healthcare providers.

Collaborations Necessary to Provide Certain Products and Services Related to COVID-19

The Joint Statement explicitly recognizes that “health care facilities may need to work together in providing resources and services to communities without immediate access to personal protective equipment, medical supplies, or health care.” The Joint Statement also recognizes that certain firms “may need to temporarily combine production, distribution, or service networks to facilitate production and distribution of COVID-19-related supplies they may not have traditionally manufactured or distributed” in order to produce...
products or provide services “that might not be available otherwise.” Therefore, the agencies “will also account for exigent circumstances in evaluating” these collaborations. Key to the agencies’ evaluation of the arrangement is the necessity of the collaboration in providing the products or services in question.

This is consistent with the agencies’ views on the potential for pro-competitive benefits of collaborations outlined in their existing *Antitrust Guidelines for Collaborations Among Competitors*. These guidelines, issued in 2000, state that “a competitor collaboration may enable participants to offer goods or services that are cheaper, more valuable to consumers, or brought to market faster than would be possible absent the collaboration” and that “two firms may be able to combine their research or marketing activities to lower their cost of bringing their products to market, or reduce the time needed to develop and begin commercial sales of new products.”

The March 24 Joint Statement also references the agencies’ 1996 *Statements of Antitrust Enforcement Policy in Health Care* and states that the agencies “will not challenge, absent extraordinary circumstances, providers’ development of suggested practice parameters – standards for patient management developed to assist providers in clinical decisionmaking – that also may provide useful information to patients, providers, and purchasers.” The Joint Statement also notes that “most joint purchasing arrangements among healthcare providers, such as those designed to increase the efficiency of procurement and reduce transaction costs, do not raise antitrust concerns.”

**Expedited Procedures for Agency Review of Proposed Conduct**

Recognizing that some firms will want to know the agencies’ views on a particular proposed course of conduct related to efforts to combat COVID-19, both the FTC and DOJ are implementing expedited review procedures for their existing advisory programs. The DOJ, through its business review letter program, and the FTC, through its staff advisory opinion program, provide enforcement guidance to businesses on proposed conduct. The agencies said they will respond to COVID-19-related review requests within seven calendar days of receiving the necessary information and will “resolve those addressing public health and safety” within that timeframe. Requesting parties generally will be required to provide detail on timing, scope, geography, any contractual arrangements, a list of customers, and any information on the competitive significance of the request in addition to an explanation how they are related to COVID-19. The agencies’ responses to such requests will be in effect for one year from the date of the response.

**Reminder Regarding Common Types of Antitrust Violations**

Not surprisingly, the FTC and DOJ were careful to remind individuals and businesses not to exploit COVID-19 as an opportunity to engage in the types of conduct that are otherwise common types of antitrust violations. They recognized that “[w]hile many individuals and businesses have and will demonstrate extraordinary compassion and flexibility in responding to COVID-19, others may use it as an opportunity to subvert competition or prey on vulnerable Americans.” Accordingly, they warned that the FTC and DOJ
“will not hesitate to seek to hold accountable those who do so.” These types of conduct include “agreements between individuals and business to restrain competition through increased prices, lower wages, decreased output, or reduced quality as well as efforts by monopolists to use their market power to engage in exclusionary conduct.” The DOJ also underscored that it “will also prosecute any criminal violations of the antitrust laws, which typically involve agreements or conspiracies between individuals or businesses to fix prices or wages, rig bids, or allocate markets.” As we have described in prior communications, the DOJ and other federal agencies are particularly focused on detecting and prosecuting anticompetitive conduct by companies involved in government procurement.

**Defense Production Act**

In the Joint Statement, the agencies also state that they “stand ready to assist” other government agencies under the Defense Production Act of 1950 (DPA). Among other things, the DPA authorizes the President to “require that performance under contracts or orders . . . which he deems necessary or appropriate to promote the national defense shall take priority over performance under any other contract or order, and, for the purpose of assuring such priority, to require acceptance and performance of such contracts or orders in preference to other contracts or orders by any person he finds to be capable of their performance.” The Act also authorizes the President “to allocate materials, services, and facilities in such manner, upon such conditions, and to such extent as he shall deem necessary or appropriate to promote the national defense.”

Furthermore, under the Act, the President may “control the general distribution of . . . material in the civilian market,” but only upon a finding “that such material is a scarce and critical material essential to the national defense” and “that the requirements of the national defense for such material cannot otherwise be met without creating a significant dislocation of the normal distribution of such material in the civilian market to such a degree as to create appreciable hardship.” In a March 18, 2020 executive order, the President found “that health and medical resources needed to respond to the spread of COVID-19, including personal protective equipment and ventilators” meet these criteria and designated authority to the Secretary of Health and Human Services with respect to these resources.

Beyond these actions already taken, and relevant to the issue of competitor collaborations, the DPA provides that “[u]pon finding that conditions exist which may pose a direct threat to the national defense or its preparedness programs, the President may consult with representatives of industry, business, financing, agriculture, labor, and other interests in order to provide for the making by such persons, with the approval of the President, of voluntary agreements and plans of action to help provide for the national defense.”

There are multiple ways in which the DOJ and FTC may assist other government agencies under the DPA. The Act requires that the Attorney General or his delegate and the Chairman of the FTC or his delegate to participate in meetings where these voluntary agreements are developed. In addition, the DPA requires that if the President delegates authority with respect to voluntary agreements, the designee must consult with
the Attorney General and the FTC, and obtain approval of the Attorney General before engaging with businesses for the purposes of facilitating the contemplated agreements. The Act also requires the President’s designee to establish “rules . . . incorporating standards and procedures by which voluntary agreements and plans of action may be developed and carried out” to be approved by the Attorney General after consultation with the Chairman of the FTC. The “voluntary agreement or plan of action may not become effective unless and until . . . the Attorney General (after consultation with the Chairman of the Federal Trade Commission) finds, in writing, that such purpose may not reasonably be achieved through a voluntary agreement or plan of action having less anticompetitive effects or without any voluntary agreement or plan of action.” The Act requires the Attorney General and the Chairman of the FTC to monitor any voluntary agreements or plans of action.

Importantly, the DPA provides for a defense against federal and state civil and criminal antitrust actions against certain conduct if, among other things: the action was taken to develop the voluntary agreement or plan; or taken to carry out the agreement or plan, but only if “the action was specified in, or was within the scope of, an approved voluntary agreement.” The defense is not “available unless the President or the President’s designee has authorized and actively supervised the voluntary agreement or plan of action.” The defense is also not available if “the action was taken for the purpose of violating the antitrust laws.”

**Pandemic and All-Hazards Preparedness Act**

The Joint Statement also indicates that the DOJ and FTC are ready to work with other government agencies in accordance with the Pandemic and All-Hazards Preparedness Act. This law allows the Secretary of Health and Human Services “in coordination with the Attorney General and the Secretary of Homeland Security” to meet and consult with businesses “engaged in the development of . . . a qualified pandemic or epidemic product . . . for the purpose of the development, manufacture, distribution, purchase, or storage” of such a product. (Generally, a qualified pandemic or epidemic product is a drug, biologic or device used for treatment related to a pandemic or epidemic.) In addition to the businesses involved, the meeting is open to the Attorney General and the Chairman of the FTC. Participation in such a meeting or consultation itself, if conducted in accordance with the requirements of the Act, “shall not be a violation of the antitrust laws.”

Conduct under agreements arising from these meetings or consultations may be exempt from the federal antitrust laws under certain conditions. Among other things, the agreement must be submitted to the Attorney General and Chairman of the FTC. The Attorney General, in consultation with the Chairman, decides whether to grant the request for exemption within fifteen business days (which may be extended by ten business days). The Attorney General, in consultation with the Chairman of the FTC and the Secretary of Health and Human Services, must find that the conduct “will not have any substantial anticompetitive effect that is not reasonably necessary for ensuring the availability of the . . . product involved.” Any exemption is narrowly tailored to the covered agreement, and businesses may still be subject to antitrust liability for conduct not reasonably necessary to carry out the agreement or not expressly covered by the
exemption. Among other things, “[e]ntering into any agreement or engaging in any other conduct restricting or setting the price at which a . . . product is offered for sale” is not covered by the Act.

**Conclusion**

Businesses contemplating engaging in collaborations with competitors or potential competitors should seek antitrust counsel. The federal antitrust agencies have in place useful, relevant guidance on how the antitrust laws would apply to collaborations to combat the COVID-19 pandemic, and various federal laws – under certain narrow conditions – would provide limited antitrust exemptions and defenses. The new procedures announced by the DOJ and FTC may allow businesses seeking to respond to the COVID-19 pandemic through collaborations to gain clarity regarding the agencies’ views of such practices on an expedited basis.

Practice Management Attorney Mark R. Laramie and Associate Jay S. Kaplan contributed to this client alert.
March 25, 2020

On March 23, 2020, SEC Division of Enforcement Co-Directors Stephanie Avakian and Steven Peikin issued a statement concerning maintaining “market integrity” in light of the unprecedented and myriad impacts of the COVID-19 pandemic, and the increased likelihood that reporting company insiders could be in possession of material nonpublic information. The Co-Directors focused in particular on the importance in the current environment of strictly following corporate controls and procedures relating to material nonpublic information.

The Co-Directors observed that officers, directors and other corporate insiders are “regularly learning new material nonpublic information,” and that such information may take on even greater value given current circumstances. This may be the case particularly as “if earnings reports or required SEC disclosure filings are delayed due to COVID-19.” We note that while a number of companies have withdrawn or modified previously issued guidance, that practice is not universal. The SEC’s statement also noted that a greater number of people than usual – both within the company and external advisors – may have access to material nonpublic information. This group may well reach beyond those identified in securities trading programs that are required to pre-clear their trades in company securities. Accordingly, the Co-Directors emphasized the need for those in possession of material nonpublic information “to keep this information confidential and to comply with the prohibitions on illegal securities trading.”

The Co-Directors stressed the importance of companies adhering to corporate controls and procedures around the use and dissemination of material nonpublic information, including their disclosure controls and procedures, insider trading prohibitions, codes of ethics and Regulation FD procedures, “to ensure to the greatest extent possible that they protect against the improper dissemination and use of material nonpublic information.” The SEC’s statement also urged broker-dealers, investment advisers and other registrants to be mindful of the need to continue complying with policies and procedures designed to prevent the misuse of material nonpublic information.

Given current volatility in the market, and the potentially heightened importance and wider dissemination of material nonpublic information, public companies, their advisors and other market participants should be especially mindful of the risks of using or selectively disclosing material nonpublic information and continue to strictly enforce relevant controls and procedures. In addition, given the sharp rise in the number of people now working remotely, companies may wish to remind employees of the need to safeguard and
properly handle confidential information, including but not limited to, material nonpublic information, while they are outside the physical confines of the office.

Emerging Technologies in the Age of Coronavirus

The Coronavirus pandemic has created unprecedented challenges for businesses worldwide, including with regard to personnel safety, basic operations, supply and distribution networks and information technology. It has also brought together high-technology and pharmaceutical companies in a shared goal to find effective treatments and a vaccine for COVID-19. Many cutting-edge technologies have become essential in coping with and managing the crisis, including high-bandwidth telecommunications for working remotely,\(^1\) the use of bioinformatics and modeling for research and drug development in the biopharmaceutical industry\(^2\) and AI-assistants for healthcare providers. Looking forward, the current crisis sheds light on the role that emerging technologies will play in the prevention and management of future pandemics, as well as the private investment, regulatory development and legal frameworks that will guide near-term innovations in these fields.

**Artificial Intelligence**

Artificial intelligence (AI) technologies are playing a major role in the search for treatment, the diagnosis and the containment of COVID-19. For example, research organizations and drug development companies are using AI to try to predict which drugs or biological products will be effective in treating COVID-19.\(^3\) In hospitals, AI is reportedly being used in medical imaging for diagnosis of COVID-19 pneumonia, based on

---

lung CT scans,\(^4\) as well as in sensors that can predict which patients are likely to experience complications such as respiratory failure or sepsis.\(^5\)

In the United States, the FDA has already approved for sale a number of AI medical devices that provide clinical and diagnostic decision support for various conditions unrelated to COVID-19.\(^6\) However, emerging AI products will test the agency as they become more autonomous and assume more decision-making responsibility from human caregivers. Cognizant of that challenge, the FDA is proactively developing more expedited and developer-centric programs to facilitate oversight of sophisticated AI medical devices, without slowing down research and development.\(^7\)

AI is also expected to play a role in preventing future outbreaks, including modeling and tracking data that may help predict where the next pandemic may arise and spread. In addition, the “hands-free” revolution, fueled by AI speech recognition and natural language understanding (NLU) technologies, is likely to see increased demand as people become more sensitive to interacting with public environments. As advances in NLU enable a greater range of speech-activated interfaces, everyday devices like elevator buttons, security touchpads, vending machines and point-of-sale interfaces may increasingly become voice-activated and touchless.

Blockchain

Coronavirus has exposed the dependence of our social, political and administrative institutions on in-person interaction. Political debates, primary elections, court and governmental functions, and public education are being drastically disrupted. The upcoming national election in November, despite being several months away, could similarly be at risk given the necessity for in-person voting.

Blockchain technologies have the potential to enable secure and confidential online participation in political processes and administrative functions. Although the concept is still developing and is subject to debate, some observers believe that permanent and verifiable blockchain-based identities can enable participation in a variety of governmental functions. These technologies have been tested in small-scale elections, and they may now gain increased adoption. Some jurisdictions are also experimenting with blockchain-based personal records that would facilitate remote engagement with governmental institutions, such as state DMVs, the Social Security Administration, and passport offices, which traditionally require human-to-human interaction. Although widespread use of these technologies will require amendments to current laws and regulations, as well as public investment in new digital infrastructure, there may now be greater political impetus to implement such initiatives.

Analytics

Large-scale data mining and analytics have become the norm in many industries, but some sectors still lag behind. The widespread economic impact of the COVID-19 crisis could prompt increased investment in technologies that can forecast, model, and quantify the impact of future adverse events. Industries that have historically relied on relatively predictable returns, such as travel and tourism, energy and transportation, will have increased demand for so-called “Black Swan” prediction technologies, and investors in these sectors will increasingly scrutinize the long-term preparedness strategies of companies when deciding where to place capital.

Analytics can also enable early detection of potential crises from small sample data. Some firms reported the COVID-19 outbreak before it became widespread, using social media and other data from the Wuhan Province in China. Refining these technologies, and coupling them with sophisticated epidemiological models of disease contagion and spread, could help governments and business leaders react more quickly to emerging events in the future.

Analytics and new computational technologies have also been instrumental in researching potential vaccines that may be effective against Coronavirus. One example is the COVID-19 High Performance Computing Consortium—a partnership that includes IBM, the Energy Department National Laboratories, Alphabet Inc.’s Google Cloud, Amazon.com Inc.’s Amazon Web Services, Microsoft Corp. and others—which makes available to researchers high-performance computing systems (supercomputers) that permit very large numbers of calculations in epidemiology, bioinformatics, and molecular modeling. These experiments would take months or even years to complete on slower, traditional computing platforms. And looking forward, as quantum computing becomes viable for industrial applications, the pace of new drug discovery could further increase substantially.

Importantly, many of these new technologies rely on vast datasets of personal healthcare information, which can raise patient privacy concerns and HIPAA requirements. Initiatives to use technology platforms

---

to trace individuals’ movements in an attempt to contain the Coronavirus pandemic have similarly raised privacy concerns. As technology advances in this space, the existing legal frameworks and privacy norms are increasingly being tested by emerging forms of healthcare data analytics.

**Virtualization**

The Coronavirus pandemic has also highlighted the value of virtual meeting and other remote interaction technologies. However, the full scale of virtualization technologies has yet to truly emerge, and limitations remain. Large conferences and events have mostly been cancelled in the wake of the outbreak, although a few have managed to “go virtual.” The public sector lags even farther behind at enabling virtual interaction. Courts, government offices, and administrative buildings are currently ill-equipped to enable virtual engagement, and coherent legal standards for virtual participation in these forums do not exist. In the corporate sector, adoption is increasing. Virtual shareholder meetings, which were criticized when first adopted by some companies a few years ago as not allowing the intangible benefits of an in-person meeting, will undoubtedly become more prevalent—with the Coronavirus pandemic turning attention from “why” to have a virtual meeting to “how” to improve the virtual meeting experience.

The next generation of virtualization technologies are likely to enable multi-sensory, multi-participant, immersive experiences that allow a range of interactions beyond current capabilities. Many of the core technologies, such as 5G networks, augmented and virtual reality interfaces, and haptic feedback devices, are rapidly nearing commercial readiness. Sophisticated virtualization technologies will also increasingly rely on real-world counterparts to enable truly remote engagement in a full spectrum of business and social activities. Drone and autonomous-vehicle delivery services are a leading example of such counterpart technologies. However, to enable full adoption, regulatory updates will be needed to streamline the growing

---

patchwork of federal, state and local regulations of autonomous vehicles,\textsuperscript{22} and to untangle the often overlapping regulation of aerial drones by states, municipalities and the Federal Aviation Administration.\textsuperscript{23}

**Conclusion**

AI, blockchain, analytics and virtualization offer examples of emerging technologies that are uniquely situated to combat the far-reaching impacts of the Coronavirus pandemic. Advances in these fields may also mitigate the effects of future outbreaks, as well as potentially even anticipate and help prevent them. Yet, in many cases, full adoption of these technologies will require not only private capital, it will also depend on government initiatives and regulatory innovation to modernize the public sector.

March 25, 2020

UPDATE: New York State Legislature Considers Bill Affecting Certain Rents and Mortgage Payments During the Coronavirus Pandemic

In recent days, state and local governments across the United States have begun requiring the closure of non-essential businesses in order to combat the coronavirus (COVID-19) pandemic, thereby significantly affecting the ability of affected businesses and individuals to continue to meet existing financial obligations, including paying rent. This alert serves as a follow-on to the Abandonment of Leases and Abatement of Rent During the Coronavirus Pandemic memorandum issued March 23, 2020, and describes a recent bill introduced in the New York State Senate that, if passed into law, would provide financial relief to certain affected businesses and individuals.

On March 23, 2020 New York State Senator Michael Gianaris introduced Senate Bill S8125, an act to suspend rent payments and certain mortgage payments for certain residential tenants and small business commercial tenants for 90 days in response to the outbreak of coronavirus. The proposed bill, which as of the date of introduction had 13 co-sponsors, is likely to undergo substantial changes before the legislature acts on it. The bill draft, as submitted, currently provides as follows:

**Rental Relief**

Suspension, for 90 days following the effective date, of rent payments for “any residential tenant or small business commercial tenant in the state that has lost income or has been forced to close their place of business as a result of government ordered restrictions in response to the outbreak of coronavirus disease 2019 (COVID-19).”

- Applicable rent that is suspended during this period would be permanently waived and never have to be repaid.
- Late fees will not be collectable for rent accrued during this time period.

---

Small businesses are those businesses that are resident in New York State, are independently owned and operated, are not dominant in their field and employ 100 or fewer persons.²

It is unclear whether small business commercial tenants that have lost income, but have not been forced to close, would be covered as drafted, as “lost income” may be meant to only modify “residential tenant.” If the more restrictive interpretation were to apply, businesses such as restaurants, which have been allowed to remain open on a limited basis, would be unable to obtain relief under this proposed bill. Regulations would need to be promulgated setting forth parameters for what constitutes lost income, whether the lost income trigger applies to small business tenants without government closure, and how applicable tenants could avail themselves of the relief.

**Automatic Lease Renewals**

Automatic renewal of all residential and small business commercial tenants’ leases that expire during the same 90-day period at the current rent charged.³

- While it is not clear from the proposed bill, it appears that the proposed bill would override automatic renewal provisions already provided for under the terms of the affected leases, even if such leases provide for a rental increase. If a tenant has a renewal option at a higher rent that would be triggered during the applicable period, such tenant could allow the existing option to lapse in order to avail itself of the statutory provision instead.

- The proposed bill also seems to mandate automatic renewal under the specified circumstances, whether or not the tenant wishes to renew its lease.

**Mortgage Relief**

For any landlord that “faces a financial hardship as a result” of being deprived rent payments pursuant to the proposed bill, forgiveness of mortgage payments for the covered property for the same period.⁴

- The forgiven amount shall be determined by multiplying (1) the “mortgage payment”, times (2) a fraction, the numerator of which is the aggregate amount of suspended rent payments for such property during the applicable 90-day period, and the denominator of which is the total rent payments “typically owed” for the entire property over the applicable 90-day period.

² Id. at § 2(d); Section 131 of the Economic Development Law (COM) of the State of New York.
³ See § 5125 § 1(a).
⁴ See § 5125 § 1(b).
Regulations would need to be promulgated setting forth parameters for what constitutes a financial hardship and how landlords could avail themselves of this relief.

Applicable mortgage payments that are suspended during this period would be permanently waived and never have to be repaid. For loans with an amortization component, the proposed bill would by its terms operate to forgive the applicable principal amounts.

The proposed bill does not provide relief from the impact of these payment waivers on the lenders holding the applicable mortgage loans.

We will continue to monitor developments in respect of the proposed bill and keep clients apprised of pertinent information.

New York DFS Issues Emergency Regulation on Mortgage Forbearance and Certain Fees in Response to COVID-19 Pandemic

On March 24, 2020, the New York Department of Financial Services (“DFS”) issued an emergency regulation entitled “Emergency Relief for New Yorkers Who Can Demonstrate Financial Hardship as a Result of COVID-19.” The regulation provides for two forms of COVID-19-related relief. First, DFS-regulated banking organizations and DFS-regulated mortgage servicers are required to grant—subject to the “safety and soundness requirements” of each institution—a ninety-day forbearance on residential mortgage payments for individuals who reside in New York and demonstrate financial hardship as a result of the COVID-19 pandemic. Second, DFS-regulated banking organizations are required to eliminate certain ATM, overdraft, and credit card late fees for such customers, but this mandate is also subject to safety and soundness requirements.

DFS promulgated this emergency regulation pursuant to Governor Cuomo’s Executive Order 202.9, which was issued on March 21, 2020 and which we discussed in a prior memorandum. The regulation is effective through the date prescribed in the executive order, which is April 20, 2020 but is subject to extension by the Governor.

Unfortunately, the regulation does not bring clarity to an issue that has been much-discussed in recent days: the scope and effect of the first provision of the Governor’s executive order, which deems it an “unsafe and unsound” business practice for DFS-regulated banks to fail to grant ninety-day forbearances to any “person or business” experiencing financial hardship resulting from the pandemic, without limitation as to the categories of loans or other obligations. Although the regulation discusses and applies that provision in the context of residential mortgages, the regulation does not on its face purport to narrow the breadth of the provision in the executive order. At a minimum, however, DFS has shown that its first priority is providing relief to individuals.

We summarize the emergency regulation below and discuss its implications. For additional resources and real-time updates regarding new legal developments in connection with COVID-19, please visit Paul, Weiss’s Coronavirus Resource Center.
Requirement to Grant Ninety-Day Forbearances for Residential Mortgage Payments in Certain Circumstances

The emergency regulation defines “regulated institutions” to mean any DFS-regulated “banking organization as defined under New York Banking Law” and any DFS-regulated mortgage servicer. The reference to DFS-regulated “banking organization” appears to exclude DFS-licensed branches of non-U.S. banks.

Regulated institutions are required to make applications for forbearances “widely available,” and they are required to grant ninety-day forbearances in the following circumstances:

- the forbearance is for “any individual who resides in New York”;
- the individual “demonstrates financial hardship as a result of the COVID-19 pandemic”;
- the forbearance is for “any payment due on a residential mortgage of a property located in New York”;
- the forbearance is consistent with the “safety and soundness requirements of the regulated institution”;
- the mortgage at issue is not specifically excluded from the scope of the regulation.

The regulation provides that it does not apply to or affect “any mortgage loans made, insured, or securitized by any agency or instrumentality of the United States, any Government Sponsored Enterprise, or a Federal Home Loan Bank, or the rights and obligations of any lender, issuer, servicer, or trustee of such obligations, including servicers for the Government National Mortgage Association.”

The regulation also provides, “for the sake of clarity,” that it does not apply to any “commercial mortgage or any other loans not described herein.”

These provisions appear to be intended to implement the second provision of Governor Cuomo’s executive order. Although that provision refers to “consumers,” it also refers to providing an “opportunity for a forbearance of payments for a mortgage for any person or entity facing a financial hardship due to the COVID-19 pandemic.” Notably, despite the reference to “entity,” the DFS emergency regulation applies only to individuals.
Eliminating ATM, Overdraft, and Credit Card Late Fees in Certain Circumstances

The emergency regulation requires that each DFS-regulated banking organization provide the following financial relief to any “individual who can demonstrate financial hardship from COVID-19, subject to the safety and soundness requirements” of the institution:

- Eliminating fees charged for the use of ATMs that are owned or operated by the banking organization;
- Eliminating any overdraft fees; and
- Eliminating any credit card late payment fees.

Notably, the regulation requires the elimination, rather than forbearance, of these fees.

Regulated institutions are encouraged, consistent with safe and sound banking practices, to take additional steps to assist individuals who demonstrate financial hardship as a result of the pandemic.

Application Procedures and Other Provisions

The emergency regulation includes a number of other provisions, including:

- Criteria
  - The criteria developed for individuals to qualify for COVID-19 relief shall be “clear, easy to understand, and reasonably tailored” to the requirements of the regulated institution to assess whether it will provide COVID-19 relief “consistent with the goals of Executive Order 202.9 and this regulation, applicable state and federal law, and the principles of safe and sound business practices.”

- Applications
  - Regulated institutions shall, as soon as reasonably practicable and in no event later than ten business days, broadly communicate—by e-mail, website, mass mail, or otherwise—to customers how to apply for COVID-19 relief.
  - If an application for relief is missing needed information, a regulated institution shall promptly communicate with the applicant.
Applications shall be processed “immediately” and in no event later than ten business days from receiving all information reasonably required. Regulated institutions shall implement procedures for expedited processing for individuals who establish exigent circumstances.

All determinations shall be communicated in writing “where reasonably feasible and warranted.” If an application is denied, the notification must include the reason and must provide that complaints may be filed with DFS.

Record Retention

All files relating to the implementation of this regulation must be retained for a period of seven years.

**Deeming the Failure to Provide Forbearance an Unsafe and Unsound Business Practice**

The regulation states that, pursuant to the Governor’s executive order, section 39 of the New York Banking Law was modified to provide that it shall be an “unsafe and unsound” business practice if a covered entity “shall not grant a forbearance of any payment due on a residential mortgage for a period of ninety (90) days to any individual who has applied for such a forbearance and demonstrated a financial hardship as a result of the COVID-19 pandemic.” The regulation further provides that, in assessing whether a denial of a forbearance qualifies as an unsafe and unsound business practice, DFS will consider the following factors: the adequacy of the process established by the regulated institution for processing such applications; the thoroughness of the review of the application; the payment history, creditworthiness, and the financial resources of the borrower; the application of any state and federal laws or regulations that would prohibit the granting of a forbearance; and the safety and soundness of the regulated institution.

The regulation’s treatment of “unsafe and unsound” business practices raises the question whether DFS intended to narrow—without comment—the scope of the first provision of the Governor’s executive order. Recall that the first provision of the executive order deems an “unsafe and unsound” business practice the failure of a DFS-regulated bank to grant a 90-day forbearance to any “person or business” who has financial hardship resulting from the COVID-19 pandemic. As we discussed in our prior memorandum, this provision is quite broad on its face, including because it applies to individuals and companies alike and does not appear to limit the types of obligations as to which the forbearance applies. As we noted, DFS may attempt to narrow the scope of the provision in the course of enforcing it. The breadth of this forbearance provision has already provoked concern that it is being used by counterparties to sophisticated financial products to resist payment to DFS-regulated banks.

The regulation’s discussion of the executive order’s first provision creates uncertainty as to how DFS plans to implement the first provision. Although not entirely clear, it appears that, rather than purporting to somehow revise and narrow the first provision of the Governor’s executive order, DFS was likely addressing
the applicability of that first provision in the context of residential mortgages, which was the main subject of the emergency regulation. Still, the thrust of DFS’s regulation shows that it views individual consumers as the first priority and suggests that in implementing the first provision of the executive order DFS may follow that approach. Also, DFS’s regulation indicates that in determining whether an unsafe and unsound practice has been committed, DFS will take into account the bank’s consideration of traditional factors such as the borrower’s history, creditworthiness, and financial resources, and other safety and soundness concerns.

Absent specific DFS guidance, it seems likely that banks and other entities will continue to debate the scope and practical effect of the executive order’s first provision.

**Implications and Next Steps**

Importantly, under the emergency regulation, the obligation to grant forbearances for residential mortgage payments and waive certain fees is subject to a regulated institution’s “safety and soundness” requirements. This means that DFS-regulated banking organizations and mortgage servicers may still consider traditional financial factors in making determinations as to COVID-related relief; this relief is not meant to imperil the financial condition of these regulated institutions. The regulation, however, requires that the criteria used be “clear, easy to understand, and reasonably tailored” to safety and soundness considerations. This indicates that DFS may well scrutinize and even take action against banks and mortgage servicers that take an overly conservative approach.

Regulated institutions would be well advised to move quickly to develop policies and procedures for ensuring compliance with the regulation:

- This includes, as noted above, developing “clear, easy to understand, and reasonably tailored” criteria for determining which customers are eligible for relief. In addition to appropriate safety and soundness standards, these criteria should including standards for determining which customers are experiencing “financial hardship” as a result of the COVID-19 pandemic. Application workflows and deadlines should be defined that reflect the specific prescriptions of the regulation.

- In addition, relevant employees need to be trained on these new policies, procedures, and criteria, and this training must not only happen quickly, but in the context of a crisis that has disrupted normal work routines throughout New York.

- Depending on its size, scale, and customer base, a regulated institution should consider ongoing compliance monitoring measures to identify potential non-compliance with the regulation. These measures may include tracking consumer complaints related to denial of COVID-19 relief.
As an early step, regulated institutions are required to design and “broadly communicate” announcements of the availability of COVID-19 relief, and employees and any call-center personnel must be prepared to answer questions from customers. These communications and scripts should be vetted to avoid statements that could be characterized as deceptive or misleading.

We will continue to monitor the Governor’s and DFS’s responses to the pandemic.

Abandonment of Leases and Abatement of Rent During the Coronavirus Pandemic

The coronavirus (COVID-19) pandemic has significantly affected the ability of businesses across the United States to continue to operate in the ordinary course. In recent days, state and local governments across the United States have instituted increasingly restrictive measures, including the closure of non-essential businesses and even orders to “shelter in place,” in an effort to limit the disease’s spread. The existence of these restrictions and a host of changing market conditions pose a real threat to the liquidity and profitability of many businesses, and are forcing business owners to make difficult decisions. Retailers across the country have begun trimming their hours of operation or closing their stores entirely. We have seen companies lay off large portions of their work force in order to cut costs. Tenants are also weighing the decision to abandon premises they lease or to withhold rent due to their landlords. This memorandum highlights certain actions that commercial tenants suffering hardship as a result of the COVID-19 pandemic should consider taking, as well as certain factors they should take into account in doing so.

Practical Courses of Action

Commercial tenants affected by the pandemic should closely review the terms of their leases – and consider the applicability of remedies that may be available to them under statutory provisions and common law doctrines – in order to determine whether they can terminate their leases (if it makes sense to do so) or seek rent abatements.

After analyzing their rights, tenants should strongly consider reaching out to their landlords and attempting to negotiate appropriate arrangements in light of the circumstances. Especially in instances in which the landlord is predisposed to keep the lease in place and the tenant is experiencing or at risk of severe economic distress, the landlord may well be receptive to such discussions. Many tenants have already begun exploring

options with their landlords. Among other things, parties have discussed reductions in the rent owed by tenants (often for a specified period of time or on an indefinite basis until operations resume), deferrals of tenants’ obligations to pay their rent (again, for specified periods or indefinitely pending the resumption of operations), and termination of the leases (often for a stipulated sum).

In the absence of a negotiated arrangement, tenants intending to assert – based on one or more of the theories outlined below – that they are entitled to terminate their leases, or receive abatements of their rent, should promptly notify their landlords of those claims. They may want to continue to pay in full the rent provided for in their leases, and then seek refunds of rent based on those claims. Tenants that are unable to – or elect for strategic purposes not to – pay rent on a current basis may be able to escape remedial action by landlords in the short term (to the extent landlords are disinclined to enforce remedies or courts are unavailable or unwilling to grant relief). Tenant should understand, however, that they may fail in any future attempt to terminate their leases or secure abatements and may be liable (along with their guarantors) for delinquent rent and interest thereon.

In all events, tenants and landlords alike should consider the availability of alternative sources of relief, including insurance policies, potential claims of just compensation for regulatory takings, and federal, state and local programs designed to assist ailing businesses during these trying times. There may well be limitations on parties’ ability to recover insurance proceeds based on the existence of a pandemic and/or governmental actions to combat it. For example, policies of business interruption insurance may provide coverage only in the case of physical damage to property by casualty and/or contain specific exclusions for epidemics. Consistent with the advice of the Real Estate Board of New York, however, parties should review their insurance policies to determine what claims might be available to them and promptly notify their insurers of those claims.4

**Remedies Available to Landlords**

The abandonment of leased premises or the failure to pay rent would typically constitute a breach of the applicable lease. Depending on the terms of the lease, the tenant may have a cure period, although any cure periods for such breaches are generally short. If a tenant has no notice or cure right or remains in breach

---

4 The Real Estate Board of New York has advised its members to notify all of their insurers (including insurers under property, business interruption, environmental and pollution, general liability, and directors and officers insurance policies) of any business interruption losses related to COVID-19, and has suggested using language like the following for these purposes: “As a result of the March 12, 2020 Declaration of a State of Emergency issued by the Mayor of the City of New York and subsequent Declarations of Emergency by the Governor of New York State and President of the United States, the cumulative restrictions and prohibitions resulting from these Declarations, the presence of the COVID-19 virus, and other potential impairment to persons and property, your insured, ____________, has sustained a covered loss. Please kindly accept this communication as notice under the above-referenced policy issued to ____________ and any other policies in place that might provide coverage.”
beyond the applicable notice or cure period, the landlord may begin to draw down on any security posted with the landlord (usually in the form of a cash security deposit or letter of credit), sue the tenant and/or any guarantor for damages, and/or initiate eviction proceedings.

**Limitations on the Exercise of Remedies**

As a practical matter, landlords wishing to recover damages or evict tenants may be precluded from doing so under current conditions. Courts across the country have temporarily or indefinitely suspended judicial proceedings that are not deemed essential. For example, an indefinite suspension of all eviction proceedings and pending eviction orders in New York State became effective on Monday, March 16, 2020, and Governor Andrew Cuomo announced at a press conference days later that a moratorium on all evictions in New York State would remain in effect for 90 days. Even in the absence of such policies, the courts' capacity to hear and process cases brought by landlords may be compromised by shortages of personnel and other resources. The inability of landlords to exercise remedies for a period of time, however, does not affect tenants’ underlying obligations to pay rent and otherwise comply with their leases, and landlords will at some point be able to enforce their leases through the courts and, in many cases, charge default interest on delinquent payments.

**Legal Theories for Lease Terminations and Rent Abatements**

Commercial tenants may seek termination of their leases, or abatements of their rent, in connection with the pandemic, based on a number of potential legal theories, including (i) decreases in the operations of co-tenants; (ii) force majeure; (iii) casualty, condemnation or deprivation of services; (iv) constructive eviction or breach of the covenant of quiet enjoyment; and (v) frustration of purpose.

**The Language of the Lease Governs**

As an initial step, commercial tenants and landlords should carefully review their leases to determine whether a tenant has the explicit contractual right to terminate its lease or withhold rent as a result of a forced closure or other relevant circumstances. Most leases provide that rent is to be paid without setoff,

---

counterclaim or defense. Leases sometimes provide for termination or abatement under very limited circumstances, such as a casualty or condemnation or a landlord’s failure to provide bargained-for services.

**Cotenancy Provisions**

Retail leases (in particular, for shopping centers and regional malls) may contain cotenancy provisions that are premised on the notion that the value of the leasehold is dependent on retail traffic to the center, and retail traffic is often driven by the level and nature of occupancy of the center. These cotenancy provisions, if triggered, permit the tenant to pay a lower rent and in some cases to terminate the lease.

A cotenancy clause will usually be triggered by the failure to meet an agreed occupancy threshold, such as fewer than a designated number of anchor tenants open and operating and/or less than a designated percentage of gross leasable area then open and operating. Some of these clauses will have further conditions (such as the tenant in question continuing to operate, and the absence of a tenant default) and will typically have some requirement that the trigger condition has continued for an agreed duration before the tenant has any remedy. In many cases, the cotenancy trigger allows the tenant to convert to paying percentage rent (i.e., a stated percentage of gross sales) in lieu of the stated base rent in the lease for the duration of the trigger condition. The cotenancy provisions also often permit termination of the lease if the trigger condition continues for an extended period of time (typically 6-18 months).

**Force Majeure Clauses**

As outlined in our March 16 Memorandum, if a contract contains a force majeure clause, such clause can excuse a party’s nonperformance under the contract when extraordinary events prevent such party from fulfilling its contractual obligations. Tenants may try to avail themselves of such clauses, which are commonly included in commercial leases, as a means of excusing non-payment of rent under the current circumstances. There are two major caveats to tenants invoking force majeure clauses to abate rent, however. First, and most importantly, force majeure clauses typically apply only to performance obligations which are expressly stated to be subject to force majeure, and not to lease obligations generally. In fact, force majeure clauses often expressly provide that they do not apply to monetary covenants, such as a covenant to pay rent. Second, while the force majeure landscape may be significantly altered as a result of the COVID-19 pandemic, there is generally a high bar for a party to invoke such clauses, which are typically narrowly construed. Courts are reticent to expand the list of covered events that constitute a force majeure beyond those specifically enumerated in a lease. Thus, where a lease’s definition of force majeure does not explicitly include epidemics or pandemics, governmental restrictions, or other pertinent circumstances, the tenant may be unsuccessful in invoking a force majeure clause based on them.

---

Clauses Concerning Casualty, Condemnation or Deprivation of Services

Commercial leases may permit a tenant to terminate its lease, or provide for an abatement of rent for a period of time, if all or a material portion of the demised premises is damaged in a casualty or is condemned by the government or if the landlord fails to provide specified services to the tenant.

While tenants may try to argue that the actual or potential presence of COVID-19 within the demised premises constitutes damage from a casualty, this would represent a significant departure from the typical application of a standard casualty clause. Broader lease provisions that refer to “untenantability” of – rather than physical “damage” to – the leased premises could potentially support a different outcome, but it is far from certain that a tenant would be entitled to terminate its lease under such a provision. In interpreting statutes that allow a tenant (usually in the absence of a casualty provision in the applicable lease) to terminate its lease because a casualty has rendered the premises unfit for occupancy, courts have resisted claims that the presence of an epidemic constitutes adequate grounds for such a termination.⁸

If a government takes possession of private property in order to use it as (say) a hospital, a testing site or a distribution center, a displaced tenant may well be permitted under its lease to terminate or to obtain an abatement for the duration of its displacement. In contrast, it is far less clear that a tenant would succeed in arguing that a forced closure or similar action (without acquisition of title or possession) by a governmental authority constitutes a temporary taking of the demised premises for purposes of a condemnation provision. If it were to represent a taking for such purposes, then the tenant may be entitled to termination or an abatement in this case as well.

While many leases require landlords to provide certain services, those leases vary widely in addressing landlords’ failures to provide them. Tenants often waive any right to terminate or any claim of abatement if the landlords’ failures result from causes beyond the landlords’ control. Other leases specifically provide for abatements, regardless of the cause of the landlords’ failures.

Constructive Eviction or Breach of Covenant of Quiet Enjoyment

Especially in instances in which leases are silent with respect to the topics discussed above, tenants may try to look outside the four corners of their leases and invoke the common law doctrine of constructive eviction or claim breach of the implied covenant of quiet enjoyment. In order to avail itself of one of these theories, the tenant must typically show fault on the part of the landlord.⁹ The presence of a contagious disease and

---

⁸ See 61 A.L.R.2d 1445 (originally published in 1958) (outlining cases in which courts dismissed arguments that scarlet fever epidemics permitted tenants to terminate their leases).

⁹ See Milton R. Friedman, Friedman on Leases §§ 29.201 at 1468; 29.301 at 1479, 1489 (3rd ed.).
the imposition of governmental restrictions to combat it are unlikely to be sufficient in themselves. However, a landlord’s negligence in addressing the risk of contagion during this pandemic may support a tenant’s claim under one of these doctrines. At least one court has expressed a willingness to consider a tenant’s right to terminate a lease on the basis that the landlord affirmatively introduced a disease or negligently omitted to take precautions to prevent its spread. Landlords should thus be mindful of the potential legal implications of failing to take appropriate action to protect the health of tenants during a pandemic.

Unless the applicable lease provides otherwise, a tenant’s continuing to operate its business at the premises (although not necessarily its keeping items at the premises) will typically preclude the tenant from claiming constructive eviction or at least create a presumption of tenantability. Although it may be possible in some jurisdictions to assert a breach of the covenant of quiet enjoyment while a tenant remains in possession of the premises, continued operation may well serve to weaken a tenant’s case.

**Frustration of Purpose**

Tenants may also try to invoke the common law doctrine of frustration of purpose in seeking to terminate their leases. If a lease limits the tenant to a particular use (or, in some jurisdictions, if the parties specifically contemplated a particular use when they executed the lease), and a subsequent prohibition precludes such use, the tenant may be able to show that the purpose of the lease has been so frustrated that the lease is void or voidable. Typically, however, a tenant cannot avail itself of this doctrine (even though certain uses become unlawful during the term) if the lease permits the tenant to use the demised space for one or more purposes that remain lawful. For example, restaurants in New York City (which, as of the date of this memorandum, are permitted to deliver food or sell takeout but not to have customers dine on the premises)

11. *See Majestic Hotel Co. v. Eyre*, 65 N.Y.S. 745 (N.Y. App. Div. 1st Dep’t 1900) (“We doubt not that if the landlord was guilty of affirmative negligence, or negligently suffered acts to be done by which a contagious disease was introduced into a thickly populated hotel or tenement house, or upon the breaking out of a contagious disease upon the premises, he, retaining and exercising a general control over the public parts of the house, should negligently omit to take precautions to prevent the spread of the epidemic, or otherwise to protect the tenants from contagion when the means lay within his power so to do, a case might be made which would avail as a justification for the surrender of the premises.”).

13. *See Alexander G. Tselos, Breach of Quiet Enjoyment Can Constitute Constructive Eviction, THE LEGAL J. FOR RETAIL REAL ESTATE (Spring 2017).*

15. *See Restatement (Second) of Property: Landlord & Tenant § 9.3; 74 N.Y. Jur. 2d Landlord & Tenant § 49 (Feb. 2020 update).*
will likely be unable to terminate their leases under this theory. A tenant will generally be required to show that it would be unreasonable to continue to bind the tenant.\textsuperscript{16} In assessing the severity of the hardship that a given restriction would inflict on a tenant, courts have examined, among other things, the anticipated duration of the restriction, any exemptions available to the tenant, and whether the restriction was foreseeable at the time the parties entered into the lease.\textsuperscript{17}

Even if some commercial tenants can terminate their leases under this doctrine, it would be a novel application to use this concept to allow tenants to abate rent for the duration of a forced closure without terminating their leases. While crises of this magnitude can lead to changing legal interpretations, tenants should not stop making rental payments on the assumption that this doctrine will permit them to do so without terminating their leases.

Gov. Cuomo Requires New York-Regulated Banks to Grant Forbearances in Light of the COVID-19 Pandemic and Issues Related Directives to NY DFS

On Saturday, March 21, 2020, Governor Cuomo issued Executive Order 202.9, entitled “Continuing Temporary Suspension and Modification of Laws Relating to the Disaster Emergency.” The order deems the failure of a New York-regulated bank to grant a forbearance to an individual or business in certain circumstances as an “unsafe and unsound” business practice. The order also contains a directive to the New York Department of Financial Services (“DFS”) to ensure that mortgage forbearances are granted in certain circumstances and a directive authorizing DFS to issue emergency regulations modifying ATM, overdraft, and credit card fees.

The provisions in the Governor’s executive order are effective through April 20, 2020, although it is possible that the Governor may take further action to extend their duration. These provisions represent sweeping and potentially unprecedented steps to provide emergency relief to companies and individuals from mortgage and other payments. Below, we summarize the provisions of the Governor’s order, identify some interpretive questions regarding their scope, and discuss some practical considerations for banks and other entities that may be affected.

For additional resources and real-time updates regarding new legal developments in connection with COVID-19, please visit Paul, Weiss’s Coronavirus Resource Center.

1. Modification of the New York Banking Law to Deem Failure to Grant Forbearances under Certain Circumstances an “Unsafe and Unsound” Business Practice

Scope of the Requirement

The order invokes the Governor’s authority under Section 29-a of Article 2-B of the Executive Law to temporarily “suspend or modify any statute, local law, ordinance, order, rule or regulation” during a state disaster emergency if compliance with such a legal requirement would “prevent, hinder, or delay” action necessary to cope with the disaster emergency or if necessary to assist or aid in coping with such disaster emergency.

Under this authority, the Governor modified subdivision two of Section 39 of the New York Banking Law for the period running from the date of the executive order (March 21, 2020) to April 20, 2020. That provision, according to the order, is:
hereby modified to provide that it shall be deemed an unsafe and unsound business practice if, in response to the COVID-19 pandemic, any bank which is subject to the jurisdiction of the Department shall not grant a forbearance to any person or business who has a financial hardship as a result of the COVID-19 pandemic for a period of ninety days.

The order does not define the key terms used or provide further guidance as to how this temporary provision should be applied. The following are the key elements of the temporary modified provision:

- **Entities subject to the provision**: The temporary provision applies to “any bank which is subject to the jurisdiction of” the New York Department of Financial Services (“DFS”). This appears to encompass both banks that are chartered by DFS and also branches of out-of-state or non-U.S. banks, which are licensed by the DFS.

- **Who benefits from the provision**: The temporary provision deems it an “unsafe and unsound business practice” if a covered bank “shall not grant a forbearance to any person or business who has a financial hardship as a result of the COVID-19 pandemic for a period of ninety days.”
  - On its face, the provision benefits both individuals and companies. There may be some question as to whether the provision applies to non-profit entities and other organizations (given the term “business”), although the intent of the provision was likely to cover such entities.
  - The provision applies to “forbearances,” which seems to apply to loans of various kinds, including mortgages. There may be debate as to whether “forbearances” applies to other types of obligations. There may also be debate as to the terms of the forbearance that is contemplated by the provision.
  - There is also some interpretive uncertainty regarding which persons and businesses should be understood to have a “financial hardship as a result of the COVID-19 pandemic.” “Financial hardship” seems to be something less than the inability to make payments on the loan in question, but where this line should be drawn is not clear.
  - There may also be causation-type questions regarding whether an individual’s or company’s financial hardship is “as a result of” the pandemic or “as a result of” some other cause.

- **“For a period of ninety days”**: “[F]or a period of ninety days” likely modifies “forbearance,” meaning that the forbearance in question must be granted for a period of ninety days. (It does not seem sensible to read “for a period of ninety days” to modify the financial hardship resulting from the COVID-19 pandemic.)

- **Effective dates of the provision**: As noted, by the order’s terms, this temporary provision is effective from the date of the executive order (March 21, 2020) through April 20, 2020. Further action by the
Governor could extend the effective dates of the modified provision for additional thirty-day periods as long as the state of emergency persists.

**Consequences of Failing to Grant a Required Forbearance**

Under the temporary provision, the failure to grant a required forbearance shall be deemed an “unsafe and unsound” business practice under subdivision 2 of section 39 of the New York Banking Law. That subdivision authorizes DFS to issue an “order” to a regulated entity to “discontinue” any unauthorized or unsafe and unsound business practice and to fix a time for the entity to appear to present any explanation in defense of its actions. Thus, DFS appears to be empowered to issue an order to a DFS-regulated bank to grant a forbearance required by the temporary provision that DFS believes was incorrectly denied.

If a DFS-regulated bank does not comply with such an order, DFS may pursue an enforcement action under section 44 of the New York Banking Law. Under Section 44(2)(a), the DFS superintendent may, after notice and a hearing, require any DFS-regulated bank to pay a penalty for any violation of, *inter alia*, any “final or temporary order issued pursuant to section [39] of this article.” Section 44(2)(b) provides that the penalty for each violation shall not exceed $5,000 for each day during which such violation continues. If, however, DFS finds aggravating circumstances enumerated in Section 44(3) and Section 44(4)—including reckless or knowing conduct—the penalties may be up to $25,000 per day or even higher.

**Practical Considerations**

It seems important for DFS to provide guidance on some of the interpretive questions discussed above and the consequences of violating the temporary provision. However, given the exigencies of the public health crisis, the timing and comprehensiveness of any such guidance is uncertain. Absent DFS guidance, banks should expect that DFS will interpret the provision to apply in a broad fashion. Banks that interpret the provision narrowly or technically may risk adverse DFS action.

DFS-regulated banks would be well advised to quickly develop procedures for ensuring their compliance with this temporary provision, including guidelines for determining which persons and entities qualify for forbearance and training to relevant employees.

2. **Directive to DFS to Promulgate Emergency Regulations Concerning Mortgage Forbearances**

The Governor’s executive order also invokes his section 29-a authority to issue two directives to DFS for the period from the date of the order through April 20, 2020. The first directive reads as follows:

The Superintendent of DFS shall ensure under reasonable and prudent circumstances that any licensed or regulated entities provide to any consumer in the State of New York an opportunity for a forbearance of payments for a mortgage for any person or entity facing a
financial hardship due to the COVID-19 pandemic. The Superintendent shall promulgate emergency regulations to require that the application for such forbearance be made widely available for consumers, and such application shall be granted in all reasonable and prudent circumstances solely for the period of such emergency.

Scope of the Directive

This directive seems to sweep more broadly than the temporary modification to section 39 described above in that this directive applies to “any licensed or regulated entities.” Thus, it appears to apply beyond banks to potentially encompass other entities, such as mortgage servicers.

However, the directive is narrower than the temporary modification described above insofar as it is focused on forbearances with respect to mortgages as opposed to forbearances more generally. It also appears to be narrower because it limits the right to a forbearance to those circumstances where it is “reasonable and prudent.”

The directive refers to “any person or entity.” As a result, it seems to benefit not just individuals, but companies and other organizations that have mortgages.

And unlike the temporary modification to section 39, which prescribes a ninety-day forbearance period, this directive to DFS seems to suggest that the forbearance period must last “solely for the period of such emergency” (although what this phrase modifies is not completely clear)

Practical Considerations

It is unclear how DFS will go about implementing and enforcing this directive. For example, how will DFS define “reasonable and prudent” circumstances? And under what statutory authority will DFS “ensure” that such forbearances are granted by regulated entities? For any failure to provide a forbearance, what sort of violation will this be considered for purposes of DFS’s enforcement authorities?

It is uncertain whether the Governor’s directive to DFS has any binding effect on regulated entities until DFS takes action to implement it. As a practical matter, DFS will need to provide guidance before regulated entities have a clear understanding of what is required. As DFS begins to take action to implement this directive, regulated entities would be well advised to move quickly to put in place procedures for ensuring compliance.

3. Directive Empowering DFS to Promulgate Emergency Regulations Concerning ATM, Overdraft, and Credit Card Fees

The Governor’s second directive to DFS, which also lasts through April, 20, 2020, reads as follows:
Further, the Superintendent shall be empowered to promulgate emergency regulations to direct that, solely for the period of this emergency, fees for the use of automated teller machines (ATMs), overdraft fees and credit card late fees, may be restricted or modified in accordance with the Superintendent’s regulation of licensed or regulated entities taking into account the financial impact on the New York consumer, the safety and soundness of the licensed or regulated entity, and any applicable federal requirements.

This directive empowers—but, read literally, does not command—DFS to issue emergency regulations modifying or restricting ATM fees, overdraft fees, and credit card late fees. Such regulations would seem to impact DFS-regulated banks.

As with the other directive to DFS, it is unclear under what statutory authority DFS would take these actions, and how violations of such regulations would be treated. Regulated entities are left to wait and see whether and how DFS follows up on this authority.

We will continue to monitor the Governor’s and DFS’s responses to the pandemic.

2 New York Banking Law section 39(2). Specifically, subdivision 2 of section 39 of the New York Banking Law provides that, whenever it shall appear to the DFS superintendent that any enumerated entity (including DFS-regulated banking organizations and out-of-state banks or foreign banking organizations that have DFS-licensed branches in New York) “is conducting business in an unauthorized or unsafe and unsound manner,” the superintendent may, in his or her discretion, “issue an order directing the discontinuance of such unauthorized or unsafe and unsound practices, and fixing a time and place at which such [enumerated entity] may voluntarily appear before him or her to present any explanation in defense of the practices directed in said order to be discontinued.”

3 New York Banking Law section 44. DFS brings these enforcement actions in an administrative proceeding, which would ultimately be subject to judicial review.

4 As noted below, the Governor’s order requires DFS to promulgate emergency regulations concerning mortgage forbearances, but this is only a subset of the area covered by the temporary provision.

New York and Delaware Take Steps to Toll Limitations Periods and Extend Other Deadlines in Light of COVID-19 Emergency

For additional guidance in navigating this crisis, visit our Coronavirus (COVID-19) Resource Center.

To download a compendium of our recent advisories and alerts related to the outbreak, click here.

State governments have begun to take broad actions to make wholesale adjustments to litigation deadlines in light of the challenges presented by the COVID-19 public health emergency. On March 20, 2020, New York Governor Andrew Cuomo issued Executive Order 202.8, entitled the “Continuing Temporary Suspension and Modification of Laws Relating to the Disaster Emergency,” temporarily tolling time periods for civil litigants to act under New York State law due to the ongoing COVID-19 public health emergency.¹ The Executive Order’s provisions take immediate effect, and have significant implications for all civil actions pending in New York State courts, including New York State Supreme Court (and the Commercial Division thereof). The Executive Order provides, in pertinent part, that:

In accordance with the directive of the Chief Judge of the State to limit court operations to essential matters during the pendency of the COVID-19 health crisis, any specific time limit for the commencement, filing, or service of any legal action, notice, motion, or other process or proceeding, as prescribed by the procedural laws of the state, including but not limited to the criminal procedure law, the family court act, the civil practice law and rules, the court of claims act, the surrogate’s court procedure act, and the uniform court acts, or by any other statute, local law, ordinance, order, rule, or regulation, or part thereof, is hereby tolled from the date of this executive order until April 19, 2020.[1]

The Executive Order references a pre-existing directive of the Chief Judge of the New York State Court of Appeals, embodied in a Memorandum by the Chief Administrative Judge dated March 15, 2020, implementing operational protocols for New York Courts and specifying that until further notice civil courts would remain open only to handle “essential matters.”² On March 22, 2020, following the entry of the Executive Order, an Order by New York’s Chief Administrative Judge extended these operational protocols even further, specifying that until further notice, “no papers shall be accepted for filing” in any non-essential

matter in any New York court. The list of “essential matters” in civil actions is narrow and limited to matters pertaining to health and safety, but also allows courts discretion to deem additional matters not included on the list as “essential.”

These Executive and Administrative Orders have both procedural and substantive implications for litigants in New York State. As a procedural matter, all time periods to file or respond to complaints, motions, discovery or other applications are tolled at least until April 19, 2020. Only “essential” applications can be filed during the tolling period. Substantively, by tolling time periods applicable to the “commencement” of “any legal action” prescribed by the procedural laws of the state, the Executive Order also tolls any statutes of limitations applicable to claims under New York State law from March 20, 2020 through April 19, 2020. The Order does not operate retroactively, however, and therefore does not excuse untimely actions that were required before the Executive Order was entered.

Delaware has taken comparable measures. On March 22, 2020, the Supreme Court of the State of Delaware issued an order closing all courthouses and administrative offices to the public until April 15, 2020. The order permits the Delaware courts to hold telephonic hearings or arguments in their discretion throughout this span. As one facet of this order, the Delaware Supreme Court extended any statutes of limitations or statutes of repose that would otherwise expire on or before April 15 such that they will instead continue through April 21. The order likewise extends any default deadlines under Delaware court rules or Delaware statutes through April 21, while any deadlines imposed by Delaware court orders—such as scheduling orders governing Delaware actions—will remain in place, subject to potential extensions for good cause shown. On March 23, 2020, the Delaware Chancery Court issued a further statement acknowledging that “many hearings and case schedules will have to be adjusted” and stating that the Chancery Court would be “solicitous of granting any reasonable requests for extensions.” The court urged practitioners to be flexible and cooperative to avoid the need for intervention by the court.

New York’s Executive Order 202.8 has not yet been tested or interpreted by any court. Issues in interpretation may arise, however, particularly in the context of “essential” applications in civil cases which, pursuant to the Chief Administrative Judge’s operational protocols, may be heard at this time, but as to which the Executive Order may operate to toll deadlines for responding to such applications. In addition, parties seeking emergency judicial relief or concerned about the long term implications of the current operational protocols and the Executive Order on New York State courts may seek to avoid jurisdiction in

---

New York courts altogether, and may instead attempt to establish jurisdiction in New York federal courts or in other states that have not yet instituted similar measures in civil cases. The Delaware Supreme Court order is somewhat more specific, although it too remains untested in any case.

Litigants seeking to avail themselves of the tolling period applicable to statutes of limitation under New York or Delaware law should consider carefully the choice of law analysis applicable to their claims. Under New York law, New York State courts apply New York State’s statute of limitations to claims that arise under New York law. Under New York’s borrowing statute, a nonresident's cause of action that accrued outside New York must be timely under the limitation periods of both New York and the jurisdiction where the cause of action accrued. Other states with similar statutory schemes also routinely apply New York’s statute of limitations to claims brought under New York law, but filed in other jurisdictions. Courts both in New York and other jurisdictions may be called upon to interpret the application of the Executive Order to the timeliness of claims that may otherwise be barred under applicable statutes of limitation. All of these considerations remain true under Delaware law and the recent Delaware Supreme Court order as well.

We will continue to monitor developments and keep clients apprised of pertinent information.

COVID-19: Withdrawing or Revising Earnings Guidance

As the COVID-19 pandemic continues to shock economies around the world, many public companies have determined that their previously issued guidance is no longer accurate. As of the date of this memorandum, more than 70 public companies across industries, including airline, retail, manufacturing, financial services, technology, communications, real estate, hospitality and agriculture, have either withdrawn or revised downward previously issued guidance, with the large majority opting to withdraw.

On March 4, 2020, the SEC issued conditional relief for public companies affected by COVID-19 that have SEC filings due between March 1 and April 30, 2020. The press release (the “Conditional Relief Release”) is available here. In the Conditional Relief Release, the SEC suggests that public companies may need to consider whether previous disclosure should be revisited, refreshed or updated to the extent that prior disclosures have become materially inaccurate. We highlight below some key areas of focus for public companies in considering whether to withdraw or revise guidance in light of the COVID-19 pandemic.

For more information regarding the impact of COVID-19 on public disclosure and other obligations of SEC reporting companies, please see here.

Previously Issued Guidance

SEC reporting companies generally do not have an affirmative obligation under U.S. federal securities law to update previously issued guidance unless, for some reason, they affirmatively indicate that they will update guidance. Furthermore, if earnings guidance was accompanied by a meaningful cautionary statement regarding forward-looking statements, the guidance should be broadly protected by the safe harbor for forward-looking statements found in the Private Securities Litigation Reform Act of 1995. Nevertheless, as a general matter, a public company that has determined that previously issued guidance is no longer accurate will need to consider whether any future statement by the company could be viewed as an affirmation of such previously issued guidance. In addition, investors may have an expectation that companies that know they will miss guidance by a wide margin will not wait too long before providing an update to the market in some manner. Accordingly, for investor relations and other reasons, public companies that have issued 2020 guidance may want to reconsider their public disclosure in light of the COVID-19 pandemic and the Conditional Relief Release.

Revisiting Previously Issued Guidance

Since the SEC issued the Conditional Relief Release, a large number of public companies have withdrawn or revised previously issued guidance. As the crisis has deepened, and the effects of the COVID-19 pandemic
have become more serious and uncertain, we have seen most public companies opt to withdraw previously issued guidance in its entirety rather than revising it.

In determining whether to retain, withdraw or revise guidance, public companies should evaluate whether they are in a position to produce reliable guidance at the moment given market conditions and the degree of uncertainty in respect of COVID-19. Additionally, public companies should consider the implications of disclosing revisions to previously issued guidance on their future public disclosure obligations. If a public company issues revised guidance, plaintiffs firms may later argue that the company has assumed a duty to provide further revisions as a result of changing circumstances relating to COVID-19 or otherwise. Therefore, a public company that issues revised guidance should include an explicit disclaimer to updating such guidance.

A public company may also consider whether it is necessary and prudent to withdraw or revise previously issued guidance in the context of any other update the company is providing about its business. For example, a number of public companies have made announcements regarding draws on their credit facilities and provided other comments on liquidity. These other statements may offer an opportunity or create a requirement to include a statement regarding previously issued guidance. Further, public companies should address any change in previously issued guidance in their next earnings release or quarterly or annual report, or in any prospectus or offering memorandum used in connection with an offering of securities if not previously publicly addressed.

**Considering Whether to Issue Guidance in the Future**

Public companies that historically issue guidance on an annual or quarterly basis may wish, or feel compelled by market expectations, to continue doing so. However, in light of the economic and business uncertainties caused by COVID-19, it may very well be prudent for public companies to forego issuing guidance until they are better able to produce reliable guidance.

**Trading Considerations**

While the health and general economic issues associated with the COVID-19 pandemic are common knowledge, its evolving impact on a particular company may constitute material nonpublic information. If a public company is aware that its previously issued guidance is no longer accurate, it should consider whether such knowledge constitutes material nonpublic information, in which case any trading activity by the company or individuals at the company with knowledge should be carefully evaluated, including in the case of employees selling shares following an option exercise. As a general matter, if a public company has knowledge that its results will be materially lower than its previously published (and not withdrawn) guidance, the company and individuals with such knowledge at the company should refrain from trading securities of the company until information about the company’s results is publicly disclosed.

Internal Revenue Service Postpones April 15 Federal Income Tax Payment and Tax Return Filing Deadlines

On March 13, 2020, President Trump issued an emergency declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act in response to the ongoing Coronavirus Disease 2019 (“COVID-19”) pandemic (the “Emergency Declaration”). The Emergency Declaration instructed the Secretary of the Treasury “to provide relief from tax deadlines to Americans who have been adversely affected by the COVID-19 emergency, as appropriate, pursuant to 26 U.S.C. 7508A(a).”

On March 20, 2020, pursuant to the Emergency Declaration and Section 7508A(a) of the Internal Revenue Code (the “Code”), the Internal Revenue Service issued Notice 2020-18 (the “Notice”) postponing the April 15, 2020 federal income tax payment and tax return deadline to July 15, 2020. The Notice supersedes the relief previously issued in Notice 2020-17 described in our prior alert, which had provided more limited relief.

For any person with a federal income tax payment or federal income tax return due April 15, 2020 (an “Affected Taxpayer”), the Notice postpones the due date to July 15, 2020 for:

* filing federal income tax returns due on April 15, 2020,
* federal income tax payments (including payments of tax on self-employment income) due on April 15, 2020 in respect of an Affected Taxpayer’s 2019 taxable year, and
* federal estimated income tax payments (including payments of tax on self-employment income) due on April 15, 2020 in respect of an Affected Taxpayer’s 2020 taxable year.

---

3 The term “person” includes an individual, a trust, estate, partnership, association, company or corporation, as provided in section 7701(a)(1) of the Code.
There is no limit on the amount of tax payments that may be postponed pursuant to the Notice. Affected Taxpayers do not have to file Forms 4868 or 7004 to obtain the postponement of the federal income tax return due date provided in the Notice.

The Notice deems all Affected Taxpayers to have been affected by the COVID-19 emergency. There is no requirement that an Affected Taxpayer demonstrate any actual direct impact of the COVID-19 pandemic.

The Notice does not provide an extension for the payment of any other type of federal tax or for the filing of any information return.

March 22, 2020

COVID-19: Certain Considerations for Open-Ended Fund Managers; Looking at 3/31, and Beyond

As financial markets continue to exhibit extreme volatility as a result of COVID-19, related macro and geopolitical factors and oil price movements, managers of hedge funds (and other open-ended and evergreen funds) should assess challenges and vulnerabilities to their businesses, as well as potential opportunities that may lie ahead.

Portfolio financing and trading counterparties; rescue financings

Similar to 2008, with mark-to-market valuations taking a significant hit (even when the fundamentals of the underlying investments might not have changed) and lenders increasing lending-based “haircuts,” the most immediate challenge many managers face relates to their trading counterparties.

In this regard, managers should consider:

- reviewing their trading agreements to ensure they understand the various triggers and termination provisions their trading counterparties may look to exercise;
- engaging proactively with their trading counterparties to make sure the counterparties understand the portfolio composition, its liquidity and assets’ intrinsic value relative to their (presumably temporary) mark-to-market valuations; and
- if liquidity is expected to be an issue, alternative ways to protect the portfolio against defaults and associated remedies (e.g., BWIC by lending counterparties). Certain rescue financing tools utilized in 2008 may be available nowadays, such as equity infusions, debt infusions and convertible debt structures.

Handling redemptions

Redemptions may not be targeted only at funds experiencing poor performance, but also at those with steady or strong returns – with the latter effectively acting as a more stable source of liquidity for investors (a/k/a “being an ATM”). Managers whose funds have longer redemption notice cycles may also be able to foresee significant redemptions down the road, and should consider future liquidity needs sooner rather than later, including when evaluating current redemptions. Compounding the redemption challenge, many funds have invested increasingly in assets that are, or have become, illiquid.
In this context, managers may want to:

- monitor the level of illiquidity in your portfolio, including relative to redemption schedules. Assess whether, in this environment, even if you do not currently face a liquidity issue, it is prudent to reduce illiquidity in the portfolio and/or to draw upon any available mechanisms (such as side pockets) to minimize the possibility of any liquidity mismatch in the near future;

- review your fund documents to assess the alternatives and prepare for any liquidity mismatch — for example, the ability to distribute in kind, establish liquidating trusts or special-purpose vehicles (“SPVs”), use synthetic SPVs, invoke fund-level or investor-level gates, utilize “slow-pay” redemption features and exercise suspension rights. As mentioned in our March 11 alert, each of these tools is typically subject to certain procedural, timing and approval parameters that should be followed in order to implement them in the most efficient and legally protective way;

- prepare and potentially implement a plan for providing investors with an alternative to redemption by, for example, offering to restructure all or a portion of the fund into a new closed-ended structure;

- regardless of the form of liquidity tool(s) implemented, ensure that reserves are sufficient for management fees, expenses and follow-on investments; monitor ERISA participation; and consult and communicate regularly and transparently with independent directors and key service providers such as external counsel, accountants and counterparties; and

- explore innovative capital retention and raise strategies. For example, implement new classes or sub-classes for new or existing investors with lower fees or a combination of lower management fees and higher incentive-based compensation (e.g., “1 & 30” arrangement), or raise additional capital from existing investors for no or little compensation until the fund is back to positive territory (“back to HWM” vehicles), in either case, potentially in consideration for an initial lock-up or other liquidity limitations.

**Taking in additional capital**

Certain investors view the historic lows as a good buying opportunity and may wish to subscribe to existing funds in order to gain exposure to existing assets at attractive valuations.

In this regard, managers should:

- be methodical and disciplined in valuing their portfolios and documenting steps taken to ensure reliable marks, especially in the face of fund capital movements (i.e., subscriptions, redemptions and movements to or from side pockets); and
provide accurate disclosure to investors regarding the impact of recent events on their firm and the funds they manage. Particular attention should be given to assets that are expected to be disproportionately impacted by recent events and to portfolios that are expected to face liquidity pressure (including from trading counterparties).

**Messaging and IR**

Even more so than in good times, clear, honest and transparent communication with clients is key to maintaining a successful GP-LP relationship. Yet, communications may become a source for investor complaints and regulatory criticism.

In this regard, managers should:

- consider enhancing their communications practices and related policies, particularly as to who should be allowed to speak with investors and what information they are allowed to convey. Using talking points and scripts should be helpful in this regard, and managers should consider having at least two people from the firm on the phone for each investor call; and

- pay particular attention to timing of communications as to avoid concerns about selective disclosure that may impact investor actions.

**Exercise discipline with internal communications**

Humor and sarcasm tend to not read well in hindsight. Managers should consider refreshing their internal communication practices and remind personnel that “if you wouldn’t be proud to read it in the newspaper, it probably should not be written in an internal, or external, communication either.”

**Engage with your board; independent fund representative**

Tough times force hard choices. Decisions may be scrutinized in retrospect around conflict of interest and prudence issues, especially if these decisions have not yielded favorable results.

Managers should consider:

- engaging with their funds’ boards of directors sooner rather than later, and in particular making sure that the directors understand the fund, its investment strategy, asset composition, liquidity constraints and other relevant factors. Informed directors are more likely to act effectively; and

- forming/appointing independent client committees/representatives, to the extent permitted under the fund documents. Similar to board engagement, the earlier the committee/representative is familiarized with the manager and the fund, the more empowered they will be to act when necessary and the more
likely they will be to act nimbly and productively. Trying to recruit, retain and engage committee members or representatives in real time may prove challenging and ineffective.

**Consider the litigation perspective**

Both investors and regulators have the benefit of hindsight when scrutinizing actions taken under challenging circumstances.

In this regard, managers should be aware that:

- an organized decision-making process, even one that leads to unsuccessful results, provides significant protection. While not every single decision should be documented, it is advisable to document major decisions, and in particular to be able to demonstrate what facts and alternatives were considered and how conflicts were dealt with;

- having consulted with all constituencies who can bring relevant perspectives touching upon the fund’s entire ecosystem – its investors, portfolio, employees, counterparties, regulators and the media – may be a powerful tool when decisions are reviewed in retrospect;

- legal counsel, internal or external, should take part in discussions about alternatives. Appropriately, those discussions may then benefit from a privilege protection; and

- as noted in our [March 11 alert](#), in the past regulators have expressed interest in understanding how managers fulfilled their duty during market disruptions. Memorializing these steps in real time may yield fruit later.

**Plan for crisis management**

Negative news coverage, regulatory inquiries and investor complaints are only some of the challenges that a fund manager may need to wrestle with in difficult times.

In this regard, managers should consider:

- having a “break-the-glass” plan in place that includes the various functions from which advice is to be sought, taking into account the fund’s entire ecosystem; and

- engaging competent service providers in advance, including an investor relations/PR firm and outside counsel, to advise on matters that may come up if a crisis were to take place.
Dislocation brings new opportunities

Certain managers may be well-positioned to offer clients opportunities to invest in a dislocated market. These capital raises may take the form of additional classes in existing funds (which may allow managers to take advantage of opportunities more quickly, and may be spun out later into their own funds), standalone hybrid funds or SMAs/funds-of-one. As always, disclosure issues, conflicts and conflict mitigation strategies, investment allocation parameters and issues under existing funds’ governing documents (e.g., devotion of time requirements) should be considered.

Associate Robert D. Tananbaum contributed to this Client Memorandum.
COVID-19: Layoff and Furlough Considerations for Employers

In light of the significant economic impact of the COVID-19 pandemic on businesses, this Client Memorandum addresses the legal considerations for employers and certain employee protections in connection with reductions of employee headcount and/or services.¹

In connection with the COVID-19 pandemic, many employers are considering, or have already been, reducing their workforce due to the interruption of business operations as a direct or indirect result of quarantines, governmental shutdowns and the general downturn in business. Although initial reductions may be intended to be temporary, the situation can change. Given the uncertainty of the economic forecast, for many companies, it may be unclear whether current layoffs will be temporary or permanent, which in turn may impact whether or not the federal Worker Adjustment and Retraining Notification (”WARN”) Act and/or similar state and local laws apply.

Companies whose business has been significantly interrupted also have implemented or are considering implementing furloughs – a reduction in the number of hours, days or weeks that an employee can work, or a temporary suspension of work – which can implicate the federal Fair Labor Standards Act (”FLSA”).

WARN

The WARN Act, which was adopted in 1988 as a worker protection statute, requires employers with 100 or more full-time employees to provide 60 days’ advance notice to impacted workers, local governmental agencies and applicable bargaining unit representatives where an “employment loss” occurs due to a plant closing (i.e., shutting down a facility or operating unit where at least 50 employees, excluding part-time employees, at such location are terminated) or a mass layoff (i.e., employment loss of 500 employees, or one-third of the workforce, with a minimum of 50 employees, excluding part-time employees), all as determined in accordance with the WARN Act regulations. Although not explicitly covered by the WARN Act, some companies pay employees in lieu of providing the 60 days’ required notice for employee terminations. Notably, temporary layoffs of less than six months are not considered to result in an employment loss that would otherwise trigger the WARN Act. If a company is only engaging in a temporary layoff not to exceed six months, then the WARN Act notice is not required. However, it would be prudent for an employer that is currently contemplating only a temporary layoff to communicate to employees that the layoff is expected to be less than six months.

¹ For additional guidance in navigating this crisis, visit our Coronavirus (COVID-19) Resource Center.
Under the WARN Act, the determination of whether there has been a plant closing or mass layoff is generally determined taking into account worker terminations over a 90-day period. Initially, the determination is based on a 30-day period but may also be determined based on aggregate employment losses during a rolling 90-day period. If the required 60 days’ advance notice is not provided, an employer is required to compensate the affected employees with 60 days’ pay and benefits.

There are three general exceptions to the 60-day advance notice requirement: (i) natural disasters, (ii) unforeseeable business circumstances and (iii) a faltering company (which only applies in the context of plant closings). Each of these three exceptions is very fact specific and it is not clear whether a court would treat the COVID-19 pandemic as a natural disaster or an unforeseeable business circumstance. Even if an employer qualifies under an exception, the employer should give as much notice as reasonably possible, including a statement for the basis of reducing the required notice.

It is important for employers to be aware that in addition to the federal WARN Act, employers may also be subject to state WARN Acts. Many states, including New York, New Jersey and California have state WARN Acts that are significantly more restrictive, including employers who may employ less than 100 employees, and requiring additional advance notice as well as a lower threshold of employment losses triggering application of the advance notice requirement.

For example, the New York WARN Act applies to employers with as few as 50 employees and its advance notice requirement is triggered by a plant closing affecting only 25 employees or a mass layoff affecting either 250 employees, or 25 employees or more employees if those employees constitute one-third of the workforce. Under the New York WARN Act, 90, rather than 60, days’ advance notice is required. Other states have even more restrictive requirements. The New Jersey WARN Act will require mandatory severance as of July 19, 2020 and will require one week of severance per year of service.²

Some state WARN Acts do not have exceptions for temporary layoffs, which means that notice or severance will be triggered even if the goal is to have the employees return to work when quarantine and required shutdowns are relaxed. Although many state WARN Acts have similar exceptions to those in the federal WARN Act for natural disasters and calamities, not all state WARN Acts include all of these exceptions from the requirements to provide advance notice. For the state WARN Acts that do have these exceptions, there may be variations of interpretation as well.

The analysis of whether WARN Act notice is required is extremely dependent on particular facts and circumstances.

Companies that are considering a reduction in worker hours or a temporary suspension of work will need to ensure compliance with FLSA worker protections.

Under the federal FLSA, employees are categorized as either exempt or nonexempt. Nonexempt employees are subject to governmental rules regarding wages and hours, including mandatory overtime pay. However, in general, employers are permitted to cut back the working hours for nonexempt employees to fewer hours or days than would otherwise apply on their regular schedule without incurring liability and are not required to pay nonexempt employees for time not actually worked (unless covered by separate contractual arrangements, employer policies or collective bargaining agreements). Note that applicable state laws may nonetheless require compensation when a nonexempt employee reports for work despite an instruction from an employer to the contrary.

By contrast, exempt employees are not subject to the FLSA wage, hour and overtime rules. To qualify as an exempt employee, among other things, an employer is generally required to pay the employee the same base salary per week, regardless of the amount of time worked during such week. Thus, if an exempt employee performs any work for the week, the employer will likely need to compensate the exempt employee for the full week. So, if an employee works for two hours on Monday and there is a furlough for the rest of the week, the employer will likely need to compensate the employee for the entire week. It is generally possible to prospectively reduce the exempt employees’ pay or place them on furlough, but employers must consider all applicable state laws in doing so (e.g., some states may require specific prior notice). Similarly, while employees are on furlough, they are not actively working and therefore they should not be expected to monitor email or voicemail. If a furloughed employee actually does do such work, then the employer may be required to compensate the employee.

For a discussion of other employment law considerations, please see our March 10 memo on Employment Law Considerations and Practical Guidance for Employers, our updated March 17 memo and our March 18 memo on Families First Coronavirus Response Act.

Other Considerations

To the extent that an employer sponsors foreign workers for green cards or visas, there may be obligations to notify the United States Citizenship and Immigration Services or Department of Labor about the change in work status.

New York and some other states are waiving the waiting periods for Unemployment Insurance benefits for employees who are out of work due to COVID-19 related closures or quarantines.
We recommend that employers seek legal advice regarding their particular facts and circumstances prior to implementing any furloughs, layoffs or reductions in force. Prior to implementing any furlough, layoff or reduction in force, care should be taken to ensure that compliance with all federal, state and local laws is observed, including but not limited to antidiscrimination laws, the federal WARN Act, any state WARN Acts, federal COBRA and any state healthcare continuation coverage requirements and laws relating to payment of wages and accrued vacation (which vary by state and may require payment of accrued vacation within specified periods following termination of employment). Employers should also review and abide by the terms of their own separation pay policies, as well as applicable collective bargaining agreements in the case of unionized workforces.

As the situation with the COVID-19 pandemic is rapidly changing, we recommend that companies seek legal advice to stay abreast of additional developments. We will continue to monitor developments and keep clients apprised of pertinent information.

New York Passes Emergency Paid Sick Leave Law for COVID-19 Relief

On March 18, 2020, New York Governor Andrew Cuomo signed a law passed by the New York Legislature regarding paid sick leave for New Yorkers in response to COVID-19 (the “Paid Sick Leave Law”). The law’s provisions addressing COVID-19 are effective immediately, while more general changes to paid sick leave will take effect later this year. This Client Alert summarizes key provisions of the bill, including criteria for employee eligibility, qualifying employers and restrictions on accessing the leave provisions. For additional resources and real-time updates regarding new legal developments in connection with COVID-19, please visit Paul, Weiss’s Coronavirus Resource Center.

Immediate Paid Sick Leave and Job Protection

Effective immediately, the Paid Sick Leave Law provides paid sick leave and guarantees access to New York State’s Paid Family Leave Benefit Law and disability benefits for all eligible employees who are subject to a mandatory or precautionary order of quarantine or isolation for COVID-19, as follows:

- Employees of employers with 10 or fewer employees as of January 1, 2020 and $1 million or less of net income in the previous tax year will receive unpaid leave until the termination of any mandatory or precautionary order of quarantine or isolation and shall be eligible for paid family leave benefits and benefits due to disability.1

- Employees of employers with 11 to 99 employees, and employees of employers with 10 or fewer employees and more than $1 million of net income, will also receive five days of paid sick leave and then unpaid leave.2

- Employees of public employers or employers with 100 or more employees will also receive 14 days of paid sick leave and then unpaid leave.3

---

2 Id. § 1(b).
3 Id. § 1(c).
An employee is eligible if he or she is subject to a mandatory or precautionary order of quarantine or isolation issued by the state of New York, the department of health, local board of health, or any governmental entity duly authorized to issue such order due to COVID-19.\(^4\)

An employee is not eligible for benefits under the Paid Sick Leave Law if the employee is subject to a COVID-19 quarantine order because the employee knowingly traveled to a country for which the Centers for Disease Control and Prevention (CDC) issued a level 2 or 3 travel health notice, and that travel was not part of his or her employment or at the request of the employer.\(^5\)

The Paid Sick Leave Law also does not apply if an employee is deemed asymptomatic or has not yet been diagnosed with any medical condition and is physically able to work while under a mandatory or precautionary order of quarantine or isolation, whether through remote access or other similar means.\(^6\)

Any employee who receives sick leave from a federal government program in response to COVID-19 will have such leave counted toward the amounts of guaranteed leave under the Paid Sick Leave Law.\(^7\)

The Paid Sick Leave Law’s requirements do not apply at this time to employees of private employers that voluntarily close business operations due to health and safety concerns regarding COVID-19.

Further, the Paid Sick Leave Law prohibits employers from retaliating against an employee who takes sick leave in accordance with the law.

**Statutory Sick Leave Effective in 180 Days**

In addition to providing paid sick leave for eligible employees affected by COVID-19, the Paid Sick Leave Law amends New York’s Labor Law to provide sick leave for all employees. Effective 180 days from the Paid Sick Leave Law’s enactment, which by our calculation is on September 14, 2020, the following provisions will come into effect:

- Employees of employers with four or fewer employees and with a net income equal to or less than $1 million in the prior tax year shall receive up to 40 hours unpaid sick leave in each calendar year.\(^8\)

\(^4\) Id. § 1.1(a).
\(^5\) Id. § 1.4.
\(^6\) Id. § 1.13.
\(^7\) Id. § 1.17.
\(^8\) Id. § 2.1(a).
Employees of employers with five to 99 employees, and employees of employers with four or fewer employees and more than $1 million net income, will also receive 40 hours of paid sick leave.9

Employees of public employers or employers with 100 or more employees will also receive 56 hours of paid sick leave.10

The Paid Sick Leave Law states that nothing in these paid sick leave requirements prohibits employers from providing sick leave, paid or unpaid, in excess of the required paid sick leave requirements.11

Employees shall accrue sick leave at a rate of not less than one hour per every 30 hours worked.12

**Allowable Purposes for Sick Leave Effective on January 1, 2021**

On and after January 1, 2021, the Paid Sick Leave Law provides that upon an oral or written request of an employee, an employer shall provide accrued sick leave to the employee for the following purposes:

- For a mental or physical illness, injury or health condition of such employee or such employee’s family member, regardless if a diagnosis has been made or medical care is required;13

- For the diagnosis, care, or treatment of a mental or physical illness, injury or health condition of, or need for medical diagnosis of, or preventative care for, such employee or such employee’s family member;14 and

- For an absence from work due to domestic violence, a sexual offense, stalking, or human trafficking, for such employee or a family member to seek services or assistance.15

All employers remain subject to local sick leave ordinances that exceed the requirements of the Paid Sick Leave Law.

---

9 Id. § 2.1(b).
10 Id. § 2.1(c).
11 Id.
12 Id. § 2.3.
13 Id. § 2.4(a)(i).
14 Id. § 2.4(a)(ii).
15 Id. § § 2.4(a)(iii).
**Additional Information Related to COVID-19**

We will continue to monitor developments and keep clients apprised of pertinent information.

March 19, 2020

**U.S. State Department Issues Unprecedented Global Travel Advisory**

The U.S. State Department has issued a Level 4 travel advisory for all travel outside the United States (available here). Level 4 (Do Not Travel) is the highest category of travel advisory, and to date\(^1\) has been directed at travel to specific countries. On March 15, the State Department had issued a global Level 3 (Reconsider Travel) advisory due to the spread of the coronavirus.

The advisory announced today advises U.S. citizens not to travel abroad and advises U.S. citizens abroad who reside in the United States to return to the United States, if they can. In particular, the advisory states:

> The Department of State advises U.S. citizens to avoid all international travel due to the global impact of COVID-19. In countries where commercial departure options remain available, U.S. citizens who live in the United States should arrange for immediate return to the United States, unless they are prepared to remain abroad for an indefinite period. U.S. citizens who live abroad should avoid all international travel. Many countries are experiencing COVID-19 outbreaks and implementing travel restrictions and mandatory quarantines, closing borders, and prohibiting non-citizens from entry with little advance notice. Airlines have cancelled many international flights and several cruise operators have suspended operations or cancelled trips. If you choose to travel internationally, your travel plans may be severely disrupted, and you may be forced to remain outside of the United States for an indefinite timeframe.

The State Department has authorized the departure of U.S. personnel from diplomatic and consular posts for reasons related to the coronavirus. As a result, the ability of U.S. embassies and consulates to provide services to U.S. citizens may be limited. Moreover, U.S. embassies and consulates have suspended routine consular services, although U.S. citizen services remain available to the extent resources permit. U.S. citizens abroad should check the websites of the U.S. embassy in their current location for further information on the services available (see State Department country-specific information (including websites for its embassies), available here). Additional information from the State Department is available here.

\(^1\) There are 16 countries previously covered by Level 4 advisories, including Iran, Libya, North Korea, Syria and Yemen and, more recently, China.
The State Department also announced that it will only accept applications for U.S. passports from those with life-or-death emergencies who will travel within 72 hours (see State Department update on its operations, available here).

Today’s State Department announcement is the latest in a series of steps taken by the U.S. government in response to the coronavirus. Level 4 advisories were issued in respect of travel to various countries due to the coronavirus, beginning February 2. A ban on travel by foreign nationals from China was announced on January 31. The travel ban was extended to foreign nationals travelling from Iran on February 29, and was further extended to cover travel from Schengen area countries on March 11. Ireland and the United Kingdom were added to the list on March 14. While U.S. citizens and a limited number of categories of other travelers who have been in affected area are exempt from these travel bans, those who are able to travel/return to the United States are subject to screening procedures at 13 airports and self-quarantine (see our prior alerts, available here and here).

An increasing number of countries around the world are closing their borders (affecting entry by road, rail, air and sea) to non-citizens, restricting air travel to and from certain destinations or closing airports. In the Schengen area, an increasing number of countries (each of which is legally entitled to act on its own, in this respect) are reintroducing temporary border controls for travelers from other countries in the Schengen area (see European Commission list, available here). Today’s State Department announcement will likely add to the confusion regarding international travel, particularly for citizens of all nationalities who are stranded abroad (whether because they were visiting, or residing, in another country). It is critically important to keep in mind that while advisories are just that, countries can restrict (and, in fact, are restricting) entry of non-citizens, and even if the borders are open, the means of transit may not be.

New York DFS Grants Temporary Relief and Requires Regulated Entities to Submit Descriptions of COVID-19 Preparedness Plans

Preparedness Responses Are Due April 9

The New York State Department of Financial Services (DFS) has taken a number of recent steps in response to the COVID-19 pandemic. On March 11, 2020, Superintendent Lacewell issued an order granting temporary relief and filing extensions to regulated entities with respect to certain regulatory requirements, including the annual certification deadlines under DFS’s Part 500 and Part 504 regulations.

On March 10, 2020, DFS issued letters requiring regulated entities to submit two responses describing their COVID-19-related preparedness plans “as soon as possible” and no later than 30 days (which we calculate as April 9, 2020). Specifically, DFS has required preparedness plans 1) to manage the risk of disruption to a regulated entity’s services and operations, and 2) to manage the potential financial risk arising from the effects of the outbreak. DFS issued similar guidance to virtual currency companies and highlighted special risks that those companies should consider.

Regarding both operational and financial risk, DFS emphasized that boards of directors (or their equivalents) at each regulated institution are responsible for ensuring that appropriate preparedness plans are in place and that sufficient resources have been provided to implement such plans. For their part, senior management are responsible for ensuring that “effective policies, processes, and procedures” are in place to execute the plans and communicating them consistently to employees.

We describe DFS’s actions in more detail below. For additional resources and real-time updates regarding new legal developments in connection with COVID-19, please visit Paul, Weiss's Coronavirus Resource Center.

DFS Order Granting Temporary Regulatory Relief

On March 11, 2020, Superintendent Lacewell issued an order recognizing that COVID-19 may present compliance challenges for certain regulated entities under New York’s Banking and Financial Services laws and regulations. The order provides the following regulatory allowances and directives, which are in effect until further modified:

- **Relocation and closing of locations**: Banks, licensed lenders, money transmitters, and other enumerated companies are authorized to “temporarily relocate any of their authorized places of business, and close any of their branch offices or locations, if adversely affected by the outbreak of..."
COVID-19,” without complying with prior notice or application requirements. However, regulated entities must provide “prompt written notice” of these actions to DFS. All activities conducted in new locations will remain subject to DFS regulation and supervision.

- Employees working from home: The order states that persons employed by or working for regulated entities who are conducting licensable activities from their personal residences or other temporary location “shall remain subject to the full supervision and oversight of such regulated entities.” Regulated entities shall maintain “appropriate safeguards and controls,” including with respect to data protection and cybersecurity.

- Board or committee meetings: For board of director or committee meetings, telephone or video-conference participation where all persons in the meeting may hear each other shall “constitute presence in person at a meeting.”

- Extension of filing deadlines: The order extends by 45 days various enumerated filing deadlines for regulated entities “unable to meet filing deadlines due to the outbreak of COVID-19.” These deadlines pertain to, among other things, the annual reports of various regulated entities, as well as the certification deadlines under Part 500 (cybersecurity) and Part 504 (transaction monitoring and filtering programs). The order states, however, that these extensions do not apply to the reporting of cybersecurity events under Rule 500 and the submission of LIBOR transition plans pursuant to the DFS’s December 23, 2019 industry letter.

Regulated entities would be well advised to document the COVID-19-related circumstances and hardships requiring reliance on the regulatory relief in question.

**Operational Risk Preparedness Plan**

On March 10, 2020, DFS issued guidance and a “request for assurance” that DFS-regulated institutions have preparedness plans in place to address operational risk posed by the COVID-19 outbreak.² The DFS letter requires that each institution submit a response describing its plan of preparedness to “manage the risk of disruption to its services and operations.” The responses are due “as soon as possible” and in no event later than 30 days from March 10 (April 9).

DFS stated that a preparedness plan should be “sufficiently flexible” to effectively address a range of possible effects that could result from an outbreak of COVID-19, and “reflect the institution’s size, complexity and activities.” DFS enumerated the following elements that a plan should include “at a minimum”:

1. Preventative measures tailored to the institution’s specific profile and operations to mitigate the risk of operational disruption, which should include identifying the impact on customers, and counterparts;
2. A documented strategy addressing the impact of the outbreak in stages, so that the institution’s efforts can be appropriately scaled, consistent with the effects of a particular stage of the outbreak, which includes an assessment of how quickly measures could be adopted and how long operations could be sustained under different stages of the outbreak;

3. Assessment of all facilities (including alternative or back-up sites), systems, policies and procedures necessary to continue critical operations and services if members of the staff are unavailable for long periods or are working off-site, including an assessment and testing as to whether large scale off-site working arrangements can be activated and maintained to ensure operational continuity. This would also include an assessment and testing of the capacity of the existing information technology and systems in light of a potential increased remote usage;

4. An assessment of potential increased cyber-attacks and fraud;

5. Employee protection strategies, critical to sustaining an adequate workforce during the outbreak, including employee awareness and steps employees can take to reduce the likelihood of contracting COVID-19;

6. Assessment of the preparedness of critical outside-party service providers and suppliers;

7. Development of a communication plan to effectively communicate with customers, counterparties and the public and to deliver important news and instructions to employees, along with establishing forums for questions to be asked and addressed;

8. Testing the plan to ensure the plan policies, processes and procedures are effective; and

9. Governance and oversight of the plan, including identifying the critical members of a response team, to ensure ongoing review and updates to the plan, including the tracking of relevant information from government sources and the institution’s own monitoring program.

DFS also cited the recently updated pandemic planning guidance by the federal banking regulators, suggesting that DFS-regulated institutions should consider this guidance as appropriate. Similar to the DFS guidance, that federal guidance emphasizes the important role of the board of directors in overseeing the development of the pandemic preparedness plan, approving the plan, and ensuring that senior management is investing sufficient resources into monitoring and testing the final plan.

Financial Risk Preparedness Plan

Also on March 10, 2020, DFS issued another letter requiring assurance that DFS-regulated institutions are “identifying, monitoring, and managing the potential financial risk arising from the spread of
DFS noted that institutions may be impacted in a variety of ways, ranging from increased credit risks and defaults and stock market declines to and disruptions to supply chains and service providers. The DFS required the submission of a response describing each institution’s plan for managing the potential financial risks arising from the virus, which is due “as soon as possible” and in no event later than 30 days.

DFS stated that such a risk management plan would include the following assessments, “at a minimum”:

1. Assessment of the credit risk ratings of the customers, counterparties and business sectors impacted by COVID-19;

2. Assessment of the credit exposure to customers, counterparties and business sectors impacted by COVID-19, arising from lending, trading, investing, hedging and other financial transactions, including any credit modifications, extensions and restructurings (including capitalizations of interest);

3. Assessment of the scope and the size of credits adversely impacted by COVID-19 that currently are in, or potentially may move to, non-performing/delinquent status, including consideration of stress testing and/or sensitivity analysis of loan portfolios and the adequacy of loan loss reserves;

4. Assessment of the valuation of assets and investments that may be, or have been, impacted by COVID-19;

5. Assessment of the overall impact of COVID-19 on earnings, profits, capital, and liquidity (including impact on loan-to-deposit ratio) of your institutions; and

6. Assessment of reasonable and prudent steps to assist those adversely impacted by COVID-19. Here, DFS cited to another guidance it issued on March 10, 2020, which encouraged DFS-regulated banks, credit unions, and licensed lenders to “consider all reasonable and prudent steps to assist businesses that have been adversely impacted.” This would include offering payment accommodations such as payment due date extensions or loan adjustments; waiving overdraft fees; and “easing credit terms for new loans.”

**Guidance to DFS-Regulated Virtual Currency Companies**

On March 10, 2020, DFS issued a similar guidance and request for assurance to DFS-regulated institutions “engaged in virtual currency business activity.” The DFS letter required a response describing operational risk preparedness plans on the same timeframe described above. (The letter did not specifically ask for a response on financial risk, but DFS may view the general letter discussed above to apply to virtual currency companies.)
DFS highlighted a few specific areas of concern for virtual currency businesses:

- DFS emphasized the risk to virtual currency businesses of “increased instances of hacking, cybersecurity threats, and similar events” by bad actors seeking to take advantage of the outbreak. DFS suggested heightened security measures, such as “enhanced triggers for fraudulent trading or withdrawal behavior.”

- DFS also underscored the possibility of “custody risk” and the possible need for special arrangements to move virtual currency from “cold” to “hot” wallets during times when employees may not be working from their usual locations.

- DFS also reminded institutions of their obligations to notify DFS if positive net worth falls below certain thresholds.

We will continue to monitor DFS’s response to the pandemic.

Internal Revenue Service Postpones Certain April 15 Federal Income Tax Payment Deadlines

On March 13, 2020, President Trump issued an emergency declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act1 in response to the ongoing Coronavirus Disease 2019 (“COVID-19”) pandemic (the “Emergency Declaration”). The Emergency Declaration instructed the Secretary of the Treasury “to provide relief from tax deadlines to Americans who have been adversely affected by the COVID-19 emergency, as appropriate, pursuant to 26 U.S.C. 7508A(a).” Secretary Mnuchin publicly announced on March 17, 2020 that individual taxpayers would be allowed to defer up to $1 million, and corporations would be allowed to defer $10 million for up to 90 days without penalties or interest.2

On March 18, 2020, pursuant to the Emergency Declaration and Section 7508A(a) of the Internal Revenue Code, the Internal Revenue Service issued Notice 2020-17 (the “Notice”) to implement this payment delay.

For any person with a federal income tax payment due April 15, 2020 (an “Affected Taxpayer”), the Notice postpones the due date for federal income tax payments originally due on April 15, 2020 to July 15, 2020 for amounts up to:

- $10,000,000 for each consolidated group or for each C corporation that does not join in filing a consolidated return, and
- $1,000,000 for all other Affected Taxpayers regardless of filing status (i.e., the Applicable Postponed Payment Amount is $1,000,000 for both single individuals and married individuals filing a joint return).

Relief described in the Notice is available with respect to federal income tax payments (including payments of tax on self-employment income) due on April 15, 2020 in respect of an Affected Taxpayer’s 2019 taxable year as well as federal estimated income tax payments due on April 15, 2020 in respect of an Affected Taxpayer’s 2020 taxable year. There is no requirement that an Affected Taxpayer demonstrate any direct impact of the coronavirus pandemic.

The Notice does not provide an extension for the payment of any other type of federal tax or for the filing of any tax return or information return.

March 18, 2020

**Congress Passes COVID-19 Relief Package**

On March 18, 2020, the Senate approved the Families First Coronavirus Response Act (“FFCRA” or the “Act”), an emergency relief bill that aims to provide financial support for individuals who have been affected by the ongoing global 2019 Novel Coronavirus (“COVID-19”) pandemic. The House initially passed the FFCRA in the early hours of the morning on Saturday, March 14, and later approved a number of changes to the bill through a technical corrections bill. President Trump has indicated that he “fully support[s]” the legislation and is expected to sign the bill shortly.

The FFCRA contains provisions that are designed to enhance paid sick, family, and medical leave; provide for free coronavirus testing for all individuals, including the uninsured; bolster unemployment insurance benefits; and increase funding for nutrition and food assistance programs.

This Memorandum summarizes key provisions of the FFCRA, including the requirement for certain employers to provide paid leave to employees impacted by COVID-19, as well as the various benefits that will be made available for affected individuals through federal funding. For additional resources and real-time updates regarding new legal developments in connection with COVID-19, please visit Paul, Weiss’s Coronavirus Resource Center.

**The FFCRA’s Emergency Leave Provisions**

The provisions of the FFCRA that are most likely to impact employers directly are the emergency leave provisions, which require employers to provide additional emergency paid sick leave, under the Emergency Paid Sick Leave Act (“EPSLA”), to employees who must miss work due to certain enumerated reasons relating to COVID-19 and additional public health emergency leave, under the Emergency Family and Medical Leave Expansion Act (“FMLEA”), for a qualifying need pertaining to COVID-19. The Act provides for a refundable tax credit to help offset the incremental cost to employers of providing these benefits, as discussed further below. The bill does not alter an employer’s obligation to comply with applicable state or local leave laws providing for more generous leave benefits to employees.

2. *Id.*
4. Donald J. Trump (@realDonaldTrump), Twitter (Mar. 13, 2020, 8:42 PM), [https://twitter.com/realDonaldTrump/status/1238626501555268308](https://twitter.com/realDonaldTrump/status/1238626501555268308).
Emergency Paid Sick Leave Act

The EPSLA requires certain employers to provide emergency sick leave to any employee with a qualifying need. This provision applies to private employers with fewer than 500 employees and government employers. With regard to private employers, the EPSLA defines “covered employer” as “any person engaged in commerce or in any industry or activity affecting commerce that [] in the case of a private entity or individual, employs fewer than 500 employees.”5 The provision applies to “any person acting directly or indirectly in the interest of an employer in relation to an employee” and “any successor in interest of an employer.”6 Qualifying employers will be required to provide two weeks of paid sick leave—for full time workers, 80 hours, or, for part-time workers, a number of hours equal to the number of hours that the employee works, on average, over a two week period—for reasons related to COVID-19.7

Specifically, employers will be required to provide leave to employees in the following circumstances:8

1. The employee is subject to a federal, state, or local quarantine or isolation order related to COVID-19.

2. The employee has been advised by a health care provider to self-quarantine due to concerns related to COVID-19.

3. The employee is experiencing symptoms of COVID-19 and seeking a medical diagnosis.

4. The employee is caring for an individual subject to a federal, state, or local quarantine or isolation order or an individual advised by a health care provider to self-quarantine due to COVID-19 related concerns.

5. The employee is caring for a child whose school or place of care has been closed, or whose childcare provider is unavailable due to COVID-19 precautions.

6. The employee is experiencing any other substantially similar condition specified by the Secretary of Health and Human Services in consultation with the Secretary of Treasury or Secretary of Labor.

---

5 H.R. 6201 § 5110(2)(B).
6 Id.
7 Id. § 5102(b).
8 Id. § 5102(a).
All employees are eligible for emergency sick leave, regardless of the duration of their employment. An employer may not require an employee to use other paid leave provided by the employer before the employee uses the paid sick leave described above. Paid sick leave under the Act must be provided in addition to whatever paid leave is already provided under the employer’s policies, and the Act does not alter an employer’s obligation to comply with applicable state or local leave laws. Paid sick leave must be provided at the regular rate of pay, unless the employee takes leave to care for an individual subject to quarantine, a minor child whose school or childcare center has been closed because of coronavirus, or an individual experiencing any other specified, substantially similar condition, in which case pay must be at two-thirds the regular rate. The paid leave benefit is capped at $5,110 for full-rate sick time and $2,000 for two-thirds rate sick time.

Additionally, small businesses with fewer than 50 employees may receive a hardship exemption from the Department of Labor if paid sick leave “would jeopardize the viability of the business as a going concern.” The Secretary of Labor may also exclude certain health care providers and emergency responders. Read literally, the bill does not guarantee paid sick leave if employees are unable to work solely due to business closure.

The EPSLA is to take effect not later than 15 days after the date of enactment of the Act and remain in effect until December 31, 2020.

**Emergency Family and Medical Leave Expansion Act**

The FMLEA also temporarily expands the Family and Medical Leave Act (“FMLA”) and requires private employers with fewer than 500 employees and government employers to cover 12 weeks of public health emergency leave for a qualifying need related to the COVID-19 emergency. Under this provision, the employee must be unable to work or telework in order to care for a minor child if the child’s school or place of care has been closed, or the child care provider is unavailable due to COVID-19. The provision overrides

---

9 Id. § 5102(e)(1).
10 Id. § 5102(e)(2)(B).
11 Id. § 5107.
12 Id. § 5110(5)(B).
13 Id. § 5110(5)(A).
14 Id. § 5111.
15 Id.
16 Id. §§ 5108, 5109.
17 Id. § 3102.
18 Id. § 3102(b) (amending Title I of the Family and Medical Leave Act of 1993 to add Section 110).
the definition of “employer” set forth in the existing FMLA, replacing the original “50 or more employees for each working day during each of 20 or more calendar workweeks in the current or preceding calendar year” with “fewer than 500 employees.” The FMLEA does not provide further details on its definition of an employer.

Employers must provide this leave to any employee who has worked 30 days or more for the employer. The first ten days of such leave may be unpaid, but thereafter, paid leave must be available at two-thirds the employee’s regular rates. Employees may use emergency paid sick leave, as described above, to provide for full or partial wage payment during the first two, unpaid weeks of family and medical leave. This paid leave benefit is capped at $200 per day and $10,000 in the aggregate. Employees who work under a multi-employer collective bargaining agreement are entitled to paid leave without additional or different requirements.

Additionally, small businesses with fewer than 50 employees may receive a hardship exemption from the Department of Labor if paid family and medical leave “would jeopardize the viability of the business as a going concern.” The Secretary of Labor may also exclude certain health care providers and emergency responders. Based on a literal reading of the bill, the family and medical leave would not be available if employees are unable to work solely due to business closure.

The FMLA is to take effect not later than 15 days after the date of enactment of the Act and remain in effect until December 31, 2020.

**Tax Credits Pertaining to FFCRA’s Emergency Leave Provisions**

For amounts required to be paid under the EPSLA, the FFCRA provides employers a refundable tax credit, applied against employer-side Federal Insurance Contribution Act (“FICA”) taxes (and a similar credit under the social security system for railroad employers (the “RRTA”). The credit is generally capped at $511 per employee per day for amounts required to be paid in connection with employee-based sick leave.

and at $200 per employee per day for family-based sick leave, increased by employer health plan expenses allocable to the employee’s paid sick leave and for additional Medicare payroll taxes imposed on credit-eligible amounts.\(^{29}\) If an employer claims the credit, the Act provides for the recapture of the deduction otherwise associated with creditable wages.\(^{30}\) Employers may elect out of claiming the credit on a quarterly basis.\(^{31}\) The Act provides a parallel refundable tax credit, generally to be applied against 2020 income taxes, for individuals subject to self-employment tax, with adjustments for individuals with both self-employment and third-party employment income to eliminate any double benefit.\(^{32}\)

For amounts required to be paid under the FMLA, the Act similarly provides employers a refundable FICA (or, as applicable, RRTA) tax credit.\(^{33}\) This credit is capped at $200 per employee per day, increased by employer health plan expenses allocable to the employee’s leave and for additional Medicare payroll taxes imposed on credit-eligible amounts.\(^{34}\) As with the EPSLA credit, if an employer claims the FMLA credit, the Act provides for the recapture of the deduction otherwise associated with creditable wages.\(^{35}\) Employers may elect out of claiming the credit on a quarterly basis.\(^{36}\) The Act provides a refundable tax credit paralleling the FMLA credit available to employers, generally to be applied against 2020 income taxes, for individuals subject to self-employment tax, with adjustments made for individuals with both self-employment and third-party employment income to eliminate any double benefit.\(^{37}\)

The Act also generally exempts wages paid under the EPSLA and FMLA from employer-side FICA (or, as applicable, RRTA) taxes.\(^{38}\)

**Additional Emergency Benefits for Individuals and Families Under the FFCRA**

In addition to the supplemental leave mandated by the EPSLA and the expansion of the FMLA, the FFCRA provides other means of financial support for individuals and families affected by COVID-19, including free

coronavirus testing for all individuals, regardless of whether they are insured,\(^{39}\) additional unemployment insurance benefits,\(^{40}\) and increases in federal funding for nutrition and food assistance programs.\(^{41}\)

**Coverage for Coronavirus Testing**

The FFCRA requires employer health plans, individual health insurance plans, and specified public healthcare plans to cover the costs of COVID-19 diagnostic testing and testing-associated healthcare provider visits.\(^{42}\) These requirements will remain in effect until the end of the national emergency period that was declared by President Trump on March 13, 2020.\(^{43}\)

The FFCRA requires employer health insurance plans and private individual health insurance plans to cover (i) the costs of FDA-approved diagnostic testing for COVID-19 and costs for administering such tests, and (ii) any items or services rendered during a visit to a healthcare provider (including a tele-health visit), urgent care provider, or emergency room that results in the order for the diagnostic test.\(^{44}\) Such costs are fully reimbursable to the covered individual and are not subject to deductibles, co-payments, pre-authorization, or other existing plan requirements for cost-sharing that would otherwise apply.\(^{45}\) The FFCRA expressly limits reimbursement to items or services that relate to providing or administering the test for diagnosing COVID-19 and does not require or provide coverage for any costs for treatment of COVID-19 other than as provided for under existing private healthcare plans.\(^{46}\) The FFCRA requires coverage for COVID-19 testing from the date of enactment of the Act until the end of the period of national emergency declared by President Trump.\(^{47}\)

The Act provides for Medicare Part B coverage for any cost-sharing normally required on the part of beneficiaries for costs of visits or services from care providers (including nursing home and rest home

\(^{39}\) *Id.* §§ 6001, 6002, 6003, 6004.

\(^{40}\) *Id.* §§ 4101, 4102, 4103, 4104, 4105.

services) during which a COVID-19 diagnostic test is administered or ordered.\textsuperscript{48} COVID-19 diagnostic test costs are covered under existing provisions of Medicare Part B.\textsuperscript{49}

The Act also makes COVID-19 diagnostic testing and visits to healthcare providers in which testing is received available at no cost to the beneficiary or with cost-sharing waived (as applicable to the relevant program) for individuals covered by the following public healthcare programs:

- individuals receiving care under Medicare Advantage;\textsuperscript{50}
- individuals receiving care under Medicaid and the Children’s Health Insurance Plan;\textsuperscript{51}
- American Indians and Alaskan Natives receiving care from Indian Health Services, including those referred for care away from Indian Health Services or tribal health care facilities;\textsuperscript{52} and
- individuals receiving care under TRICARE (providing coverage for uniformed service members, retirees, and their families), veterans receiving care through the Department of Veterans Affairs, and federal workers enrolled in a health benefits plan.\textsuperscript{53}

The Act allows states to extend Medicaid eligibility for uninsured populations to cover COVID-19 diagnostic testing, with the federal government matching state expenditures for medical and administrative costs.\textsuperscript{54} The Act also increases the percentage of state expenditures on Medicaid services that will be matched by the federal government during each quarter that the public health emergency period continues.\textsuperscript{55} To be eligible for increased federal matching, states must, among other things, maintain Medicaid eligibility standards that are no more restrictive than they were on January 1, 2020.\textsuperscript{56}

\textsuperscript{48} Id. § 6002.
\textsuperscript{49} 42 U.S.C. § 1395l(a)(1).

\textsuperscript{55} Id. § 6008(a).
\textsuperscript{56} Id. § 6008(b).
Funding for COVID-19 diagnostic testing is provided as follows:

- $1 billion to the Public Health and Social Services Emergency Fund to reimburse costs and claims associated with providing COVID-19 testing and testing-related services for individuals without health insurance; 57

- $82 million to the Department of Defense for those receiving care through the Defense Health Program; 58

- $64 million to the Indian Health Service for Native Americans receiving healthcare from the Indian Health Service or through an Urban Indian Health Organization; 59 and

- $60 million to the Department of Veterans Affairs. 60

The Act also provides immunity to certain entities associated with the supply chain for personal respiratory protective devices. 61 Specifically, the Act provides that such devices that are authorized for emergency use and approved by the National Institute of Occupational Health and Safety are “covered countermeasures” under Section 319F-3(i) of the Public Readiness and Emergency Preparedness Act (“PREP Act”). 62 The PREP Act, among other things, provides “covered persons” with immunity against any claim of loss caused by, arising out of, relating to, or resulting from the manufacture, distribution, administration, or use of covered countermeasures, subject to certain exceptions. 63 Pursuant to the FFCRA, such immunity would be applicable to claims arising from personal respiratory protective devices used during the period beginning January 27, 2020 and ending October 1, 2024, in response to the public health emergency declared on January 31, 2020 as a result of confirmed cases of COVID-19. 64

**Emergency Unemployment Insurance Stabilization Provisions**

The FFCRA provides states with additional funding and resources to assist them with the provision of unemployment insurance (“UI”) benefits.

57 Id., Div. A, Title V.
58 Id., Div. A, Title II.
59 Id., Div. A, Title IV.
60 Id., Div. A, Title VI.
61 Id. § 6005.
62 Id.
63 42 U.S.C. § 247d-6e.
64 H.R. 6201, § 6005.
The FFCRA provides $500 million in funding to the states within 60 days of enactment through the Unemployment Trust Fund for staffing, technology, systems, and other administrative costs related to paying and processing UI benefits.\(^{65}\) To be eligible for this funding, states must:

- require that employers provide laid-off workers with notice of potential UI eligibility;
- offer at least two of the following ways to apply for UI benefits: online, by phone, or in-person; and
- notify UI applicants once their application has been received and will be processed. If an application cannot be processed, states must notify the applicant and provide information on how to revise the application so that it may be processed.

The FFCRA also reserves $500 million in funding for emergency grants to be provided to states that experience at least a 10% increase in unemployment (compared to the same quarter in the previous calendar year).\(^{66}\) States meeting these criteria can receive an additional grant in the same amount as the UI administrative funding grant discussed above. To receive this emergency grant, states experiencing a 10% increase in unemployment must take steps to ease eligibility requirements for UI benefits that may be limiting access due to the COVID-19 outbreak, including waiving work search requirements, required waiting periods, and requirements to increase employer UI taxes if employers have high layoff rates.\(^{67}\)

For states that experience at least a 10% increase in unemployment over the same quarter in the previous year, the FFCRA also provides for 100% federal funding of Extended Benefits (“EB”) until December 31, 2020.\(^{68}\) EB, which usually require the state to fund 50% of the benefit, kick in when unemployment is high within a state and provide up to an additional 26 weeks of assistance after regular UI benefits expire (generally after 26 weeks). To receive full federal funding of EB, states must also comply with the provisions easing beneficiary access discussed above.

The FFCRA also provides states with access to interest-free loans to help them pay UI benefits through December 31, 2020.\(^{69}\)

\(^{65}\) Id. § 4102(a).
\(^{66}\) Id.
\(^{67}\) Id.
\(^{68}\) Id. § 4105(a).
\(^{69}\) Id. §4103.
The FFCRA further directs the Secretary of Labor to provide technical assistance and guidance to states in establishing, implementing, and improving short-time compensation programs. Under such programs, employers would reduce hours instead of laying off employees, and employees would be eligible for partial UI benefits to help offset the wage loss resulting from their reduced hours.

Food Security

Several provisions of the FFCRA aim to provide food security for families and children by leveraging existing programs—including the Supplemental Nutrition Assistance Program (“SNAP”), the Special Supplemental Nutrition Program for Women Infants and Children (“WIC”), and the Administration for Community Living’s (“ACL”) Senior Nutrition program—and by ensuring continued access to meals provided by child and adult care centers in the event that there is a disruption to the centers’ food supply.

The Act also creates the Maintaining Essential Access to Lunch for Students program (“MEALS”), with the express purpose of providing continued access to meals to children and adults who receive meals at care centers (including schools) if they close for a period of five days or longer. This provision aims to ensure schools and other care centers that close for regular operations during the crisis will have funds to continue to provide meals to those who currently rely on receiving daytime meals at these places.

The FFCRA also gives the Secretary of the Department of Agriculture (“USDA”) power to approve state plans to provide emergency Electronic Benefit Transfer (EBT) food assistance to households with children who would otherwise receive free or reduced-price school meals but for COVID-19-related school closures, even if such plans increase costs to the federal government.

Individuals who currently receive food assistance through federal and state programs should expect they will continue to receive such assistance for the duration of the COVID-19 emergency, even if they receive meals through their schools or care centers that have closed or will close. Those who currently receive nutrition assistance through SNAP may receive additional emergency allotments during the crisis. Additionally, individuals who lose their jobs during the crisis and as a result require food assistance may become eligible under the FFCRA, even if they were not previously eligible.

---

70 Id. § 4104.
71 Id. §2102.
72 Id. §§ 1101(d), 2102(b).
73 Id. § 2302.
74 Id.
The FFCRA waives certain requirements for existing programs (e.g., physical presence at a WIC center to receive an eligibility certification, and work and training requirements under SNAP), increases their funding to expand the number of individuals who can receive benefits, and increases allocations for individuals who already receive benefits, if necessary. Individuals who currently receive benefits under these programs or who seek access to benefits as a result of income or employment changes due to the crisis should consult their care center or local administering agency to determine their eligibility status under these programs. Companies and organizations who reduce their number of employees during the crisis should direct the unemployed persons to determine if they become eligible for assistance under SNAP or WIC as a result of their unemployment.

Organizations that locally administer SNAP benefits should consider whether some individuals are newly eligible to receive benefits and whether individuals currently receiving benefits are now eligible to receive additional benefits during the crisis. Such organizations should also be aware that certain paperwork requirements will be waived during the crisis to increase their responsiveness and flexibility.

The FFCRA aims to ensure availability of adequate funding for the domestic nutrition assistance programs through express federal budgetary allocations for specific programs and by empowering the USDA to approve state plans for food security in the event of extended care center closures. The FFCRA provides emergency funding as follows:

- $500 million for WIC, specifically to provide access to nutritious foods to low-income pregnant women or mothers with young children who lose their jobs or are laid off due to the COVID-19 emergency;
- $400 million towards assisting local food banks, which are anticipated to meet increased demand to support low-income Americans during the emergency, with $300 million dedicated to purchasing nutritious foods and $100 million to support storage and distribution of the food;
- $250 million for Department of Health and Human Services programs that aid elderly Americans, including the ACL’s Senior Nutrition program, which provides grants to states, territories, and eligible tribal organizations to provide approximately 25 million additional home-delivered and pre-packaged meals to low-income seniors who are home-bound, have disabilities, and have multiple chronic illnesses, as well as to their caregivers; and

75 Id. § 2301.
• $100 million to the USDA to provide nutrition assistance grants to Puerto Rico, American Samoa, and the Commonwealth of the Northern Mariana Islands in response to the COVID-19 public health emergency.\textsuperscript{76}

**Implementation of the FFCRA**

In the coming days, we expect regulatory agencies at the federal, state, and local level to announce policies and procedures implementing the various provisions of the FFCRA. We will continue to monitor developments and keep clients apprised of pertinent information.

Merger Review During the COVID-19 Coronavirus Outbreak

United States and European Union competition agencies have announced temporary changes in their merger review procedures as a result of the COVID-19 Coronavirus pandemic. Significantly, the United States antitrust agencies will not grant any requests for early termination. Competition review and approval delays are possible on a global basis given the magnitude of this pandemic. We continue to monitor news affecting competition enforcement during the pandemic and will issue updates as warranted.

United States

Potentially impacting anticipated closing timelines, the Federal Trade Commission (FTC) announced that the FTC and the Antitrust Division of the Department of Justice (DOJ) will not grant any requests for early termination of the waiting period under the Hart-Scott-Rodino Antitrust Improvements (HSR) Act. The statutory waiting period in most cases is 30 days, or 15 days for cash tender offers or bankruptcies. Therefore, for transactions required to be notified under the HSR Act, parties should expect to observe the full applicable waiting period. Further, parties should keep in mind the possibility that they may need to pull and refile in the event the FTC and DOJ are unable timely to process HSR filings in the current environment.

The FTC Premerger Notification Office (PNO) has implemented a temporary e-filing system for premerger notifications under the HSR Act and, as of yesterday, is not accepting hard copy or DVD filings. All filings must be submitted using the FTC’s secure cloud-based file-transfer platform. According to guidelines issued by the FTC: “After the resumption of normal agency operations, all filing parties may have to submit hard copies or DVDs of filings made using the temporary e-filing system to both PNO and DOJ.”

The DOJ announced that “[f]or mergers currently pending or that may be proposed, the Antitrust Division is requesting from merging parties an additional 30 days to timing agreements to complete its review of transactions after the parties have complied with document requests.” In addition, the DOJ has temporarily postponed scheduled depositions. These will be rescheduled to occur via videoconference.

The FTC’s Bureau of Competition announced that it is “conducting a matter-by-matter review of our investigations and litigations to consider appropriate modifications of statutory or agreed-to timing,” and that “[p]arties and their counsel should expect that we will be in touch to discuss proposed modifications.” In addition, nearly all of both agencies’ staff are working remotely and, with rare exception, meetings are being held by telephone or videoconference.
European Union

The Directorate-General for Competition (DG COMP) has asked deal parties to consider holding off on merger filings. According to a statement on its website, it “has put in place a number of measures to ensure business continuity in the enforcement of the EU Merger Regulation.” However “due to the complexities and disruptions caused by the Coronavirus, companies are encouraged to delay merger notifications originally planned until further notice, where possible.” DG COMP is also temporarily accepting – and “actually encourages” – electronic filings, noting that submissions by hand delivery “will remain possible but may become difficult due to reduced presence of staff.”

The Coronavirus: Certain Considerations for Public Companies

As the coronavirus (COVID-19) pandemic continues to slow commerce, most companies face serious challenges in almost all areas of their businesses. The recent turmoil and volatility of public financial markets has resulted in many companies facing significant decreases in their share prices. We highlight below certain key areas for boards of directors and senior management teams to consider in light of the rapidly changing landscape.

Board Duties and Responsiveness

Board Preparedness. Boards should be kept apprised of developments by management and, as appropriate, third party advisors. Given the rapidly developing landscape, boards should work with management to identify ways in which they can provide the strategic support and quick decision-making needed at this time. Among the options that boards may consider is to set more frequent, standing meetings of the full board or a committee focused on these matters.

Board Duties. While the current circumstances are extreme, state laws will continue to apply a deferential business judgment standard of review to the vast majority of board decisions. For Delaware companies, this means that so long as the board acts in good faith, in the honest belief that its decisions are in the best interests of the company and are made on an informed basis with due care, board actions generally will not be second-guessed by courts if attributable to a rational business purpose.

Senior Management and Employee Considerations

Continuity Planning. Boards and management teams should update or develop clear decision-making processes that take into account travel, communications and other disruptions already being felt and that are anticipated to result from the continuing spread of COVID-19. Additionally, preparations should be made for the potential absence of key personnel through redundancy and a broader-than-typical level of emergency succession planning.

As part of contingency planning, boards should be prepared to address a scenario in which the CEO becomes ill and tests positive for COVID-19. Boards can mitigate this risk by having in place a CEO succession plan and coordinating with investor relations, human resources and counsel. Companies have taken a range of disclosure positions when a CEO is ill, balancing how material it is to investors, how much it impacts the business and privacy concerns.
Employment Laws and Workforce Disruptions. The COVID-19 outbreak has forced companies to reconsider some long-standing and fundamental aspects of their employees’ activities, including limiting travel and introducing social-distancing measures. Even as employers focus on enhancing workplace health and safety, it is critical to remember that employers must continue to comply with laws regarding compensation and absences, privacy (e.g., HIPAA) and anti-discrimination, all of which must be considered in the context of increased monitoring of, and information-gathering from, employees. In addition, companies will have to navigate the burgeoning number of governmental and health regulations and recommendations on promoting hygiene throughout their facilities and best practices to slow the spread of COVID-19. For more information regarding employment law considerations and workforce disruption mitigation strategies, please see here.

Executive Compensation. With senior management compensation often weighted towards equity-based awards, boards may wish to review compensation packages to ensure they continue to fairly compensate and properly incentivize key members of management as they navigate this challenging environment. For some companies, adjusting performance targets (or building in flexibility to make subsequent adjustments to newly set targets) may be appropriate.

Equity-based awards made in the near-term at lower share-price values can reduce the capacity for future grants (without obtaining shareholder approval), as more shares will be needed to deliver the same value to employees. For companies that have upcoming regularly scheduled equity grants, either as part of their annual equity grant program or that have been committed to new hires in offer letters, boards should consider whether to keep grants on cycle or delay them. Note that boards are not required to delay previously committed equity grants. Because options are typically set using the share price at the time of grant and the number of equity grants is larger when share prices fall, other issues to consider include whether a company’s plans have share capacity, the appropriate share price to use to determine the number of shares underlying a dollar-denominated award and exercise prices (spot price vs. average over a specified period), applicable accounting treatment, taxes (note that options must have a fair-market-value exercise price in order to comply with Code Section 409A), equitable treatment among employees and investor and proxy advisory firm reactions.

For additional information regarding equity-based compensation considerations, please see here.

Public Disclosure and Investor Relations

Financial Reporting and Disclosure Operations. Companies will likely need to consider disclosure issues more often and rapidly than usual, and boards should consider how best to convene their board and disclosure committees under these circumstances, including through the increased use of virtual meeting technologies. For example, some companies have already withdrawn their prior earnings guidance and, in some cases, updating of company risk factors in public disclosures may also be appropriate. Boards and
management teams should remain in close contact with their legal advisors to ensure continuing compliance with disclosure obligations.

**Internal Controls and Audit Procedures.** Audit teams will also need to coordinate with their independent auditors to prepare for potential audit difficulties, such as the possibility that personnel may be restricted from accessing physical facilities, such as records repositories, which may be required by auditing procedures. Accordingly, it may be appropriate to update audit committees on the progress of financial reporting more frequently during this time.

**Trading Considerations.** Recent market conditions have presented opportunities for corporate share and debt buybacks (as discussed below) and individual purchases by officers and directors. While the COVID-19 illness is common knowledge, its evolving impact on a particular company may constitute material non-public information. As a result, any trading activity (including in the case of employees following option exercises, and whether or not occurring during an open trading window) should be carefully evaluated to ensure that the company or individual is not in possession of material non-public information (and otherwise complies with applicable rules).

**Investor Outreach.** Given market volatility, boards and management teams should prepare extensively for increased investor and analyst outreach. Extra coordination among the company’s investor relations and other internal teams and related external advisors will be needed. Companies should be sure to maintain their disclosure controls and procedures and be mindful about compliance with Regulation FD as company spokespersons field questions from investors, analysts, customers and suppliers.

For additional information regarding public disclosure and investor relations considerations, please see [here](#).

**Liquidity and Financing Considerations**

**Debt Financing.** With the proliferation of corporate credit over the past decade, many companies have drawn or are expected to draw upon available credit facilities, either to bridge liquidity shortfalls or to fund short-term opportunities. Prior to drawing, companies should review their existing debt posture and the key provisions of their debt financing agreements (e.g., scheduled payments coming due, leverage covenants, events of default and cross-linked provisions) and the impact of making such a draw, giving particular attention to ensuring current and future compliance with applicable covenants and the ability to make or “bring down” required representations and warranties. Boards should be involved in deciding whether a company will make any substantial borrowings, and may need to familiarize themselves with any conditions and potential alternatives to borrowing. Also note that certain borrowings may give rise to disclosure obligations.
Liquidity Headwinds. In addition to borrowing challenges that companies may face, boards and management teams should prepare for the loss (or continuing loss) of customers or suppliers, both in the short term and long term, and the related liquidity management difficulties. Boards and senior management will benefit from reviewing thorough financial sensitivity and liquidity forecast analyses and regularly revisiting projected cash flows and related models.

Dividends, Buyback Programs and Cash Management.

- **Dividends.** For those companies with liquidity concerns, boards may wish to reconsider dividend programs in light of liquidity constraints. The implications of any changes to dividend programs should be reviewed with the company’s investor relations team and appropriate third-party advisors.

- **Share Buyback Programs.** For companies with adequate liquidity, widespread share-price declines may present an opportunity to implement or broaden share buyback programs, for example, to offer liquidity to shareholders and support the company’s share price. Ensuring that the company will have sufficient capacity to continue operations following a buyback, particularly if economic conditions continue to decline, should be given serious consideration. And as with decisions to borrow under credit facilities, debt financing agreements must be reviewed to ensure continuing compliance through and following a buyback program.

- **Debt Buyback Programs.** Similarly, companies with sufficient liquidity may be considering debt buyback programs. As with share buyback programs, boards should consider the company's post-buyback liquidity needs and available resources prior to implementation. For additional information regarding debt buybacks, please see here.

- **Insider Trading.** As noted above, securities laws regarding insider trading, which include a general prohibition on trading while in possession of material non-public information, govern transactions in both equity and debt securities.

- **Tax Considerations.** Companies should also consider the tax implications of any buyback program and consult with their tax advisors accordingly.

Operational Considerations

Supply Chain or Logistics Disruptions. As part of a broader operational assessment of supply chains and logistics, companies should review their commercial agreements for force majeure clauses, exclusivity provisions and termination rights, among other provisions, that may be implicated by COVID-19’s disruptive effects (e.g., a company's or one of its suppliers' inability to fully perform and associated restrictions and remedies). Additional information about force majeure clauses, which excuse a party's failure to perform resulting from “acts of God” or other extraordinary events, may be found here.
Situational Awareness. Companies may wish to establish or enhance legislative and regulatory monitoring functions, as public responses (e.g., restrictions on public gatherings and travel) have evolved and changed frequently and unevenly across the world and new or expanded restraints on commerce, such as trade bans, are possible. At the same time, governmental agencies, trade groups, labor organizations or other public or private entities may make available additional resources, such as financial aid or other forms of economic relief, to businesses and individuals, and an effective monitoring function can facilitate a company availing itself of such resources (including communicating the availability of certain resources to employees).

Risk Management and Cybersecurity Considerations

Insurance. Companies should review their insurance portfolios and consult with their insurance advisors to determine the extent of coverage available to them with respect to COVID-19 related losses (e.g., disruptions in supply chains or logistics or trade restrictions) or mitigation efforts (e.g., quarantines), and to analyze the costs and benefits of additional coverage, if available. To the extent a company is covered for any such losses, notice will need to be provided to the carrier(s) at the appropriate time.

Warnings and Disclaimers. Certain businesses, including those in industries where customers are hosted in a company facility or vehicle (e.g., hospitality and travel), may wish to consider adding COVID-19 specific warnings or disclaimers to their marketing materials and/or contracts, as such businesses face a greater risk of customers claiming that they contracted COVID-19 on or in the company’s property (which may include claims for failure to provide adequate warning). Companies should consult with their legal advisors regarding the nature of potential claims customers may allege and the crafting of appropriate warnings and disclaimers.

Cybersecurity; Technology Systems Checks. With many companies implementing, and others still considering, expanded work-from-home and other social-distancing policies, careful monitoring and planning is necessary to protect operations and security, including in the following areas:

- System Capacity and Integrity. Increased technology-systems testing and monitoring may be recommended to ensure that capacity keeps pace with the increasing demand on remote access systems. Back-up and redundancy systems should be tested and reviewed to confirm they continue to meet company needs in this changing environment. Communication with third-party vendors will be critical in ensuring that essential systems and services remain available.

- Data Breaches. With more personnel using remote-access systems, the risk of data breaches or other cybersecurity incidents will continue to increase. In addition to the greater likelihood of an inadvertent data breach or security compromise, cybercriminals are likely to seek to take advantage of more users accessing systems from offsite and to step up phishing attacks targeted at employees’ COVID-19 fears. While there is no way to definitively prevent such incidents, additional security measures (e.g., two-
factor authentication and increased employee training and education) should be considered as part of a broader risk-mitigation effort.

- **Data Loss.** As employees increasingly work offsite, it is more likely that data (electronic or otherwise) will be brought outside companies’ physical facilities or protected data systems. For example, written materials may be brought out of offices, or business emails may be forwarded to personal email accounts. Disclosure, inadvertent or otherwise, of sensitive data to unauthorized parties could have serious consequences for businesses and data-security policies should be reviewed and disseminated to employees to mitigate the risk.

For additional information regarding cybersecurity and data risk mitigation, please see here.

**Monitoring Accumulation and Defensive Tools**

The significant market decline leaves companies vulnerable to activist hedge funds and other opportunists who may accumulate significant equity positions in publicly listed firms at a significant discount. Companies should examine their vulnerabilities in light of current events.

Companies should be more vigilant in monitoring their shareholder base through coordination with investor relations and watch firms, and continue to monitor beneficial ownership reports (including those on Schedules 13D, 13G and 13F). But companies should understand that the current U.S. disclosure regime (even taking into account securities regulations and antitrust filing obligations) is wholly inadequate as an early warning sign of accumulation. In the event of a rapid accumulation of shares by an activist or hostile acquirer, boards will need to act quickly, including potentially by adoption of a shareholder rights plan (a “poison pill”). Many companies now have stock monitoring firms watch for significant share accumulations (including through derivative instruments written by banks) and keep a pill “on-the-shelf;” in other words, they engage (and work with) outside advisors in advance of any known accumulation to prepare for and to streamline the pill adoption process, if it becomes appropriate.

**Coronavirus: Updated Guidance for Employers Issued by Federal, State, and City Agencies**

In the days since our prior Client Memorandum dated March 10, 2020, the public health situation in the United States and the world at large has continued to change rapidly and dramatically. On March 11, 2020, the World Health Organization (the “WHO”) declared COVID-19 a pandemic, pointing to the troubling level of spread and severity of the virus. Since then, numerous states and localities have closed schools, bars, restaurants, museums, theaters, libraries, and other public places. Restrictions have been placed on the number of individuals for social gatherings. Churches and houses of worship have suspended services. A number of cities and states have instituted curfews. The Trump Administration on March 16 released new guidelines for the public to follow over the next 15 days in hopes of slowing the spread of the virus, including closing schools, avoiding groups of more than 10 people, and limiting discretionary travel and visits to bars, restaurants, and food courts.

These changes pose significant challenges for employers striving to strike a balance between protecting employees’ health, minimizing the business impact of the pandemic, and respecting employees’ right to privacy and to work free from discrimination. The mass closure of schools in numerous states and cities including New York City requires employers to consider how federal, state and local leave laws may apply to an employee who cannot work because of child care responsibilities. Federal, state, and local agencies have issued new governmental directives and guidance to help employers comply with their legal obligations and manage the risk to their workforces and businesses posed by COVID-19. This Client Memorandum serves as a follow-on to the Employment Law Considerations and Practical Guidance for Employers Client Memorandum issued on March 10 (“March 10 Memorandum”), and summarizes the most recent guidance for employers.

---

1 For a more detailed discussion of some of the most relevant federal, state, and local statutes applicable to employers, please refer to our previous Client Memorandum dated March 10, 2020, which is available at: https://www.paulweiss.com/practices/litigation/employment/publications/coronavirus-employment-law-considerations-and-practical-guidance-for-employers?id=30833.

Updated Federal Guidance

Guidance on OSHA

The Occupational Safety and Health Administration (the “OSHA”) recently updated guidance to better prepare workplaces for the coronavirus outbreak (the “OSHA Guidance”). According to OSHA, these guidelines do not create new legal obligations but are “advisory” recommendations and descriptions of pre-existing mandatory safety and health standards. The newly issued guidance states that prompt identification and isolation of potentially infectious individuals at a worksite is “a critical step” in protecting employees, and recommends that all employers take the following steps, to the extent possible.

- Develop an infectious disease preparedness and response plan, which considers the level of risk of its workforce.
- Implement basic infection prevention measures, including establishing policies and practices such as flexible worksites and flexible work hours to increase the physical distance among employees.
- Develop policies and procedures for prompt identification and isolation of employees who are sick or experiencing symptoms of COVID-19.
- Develop, implement, and communicate about workplace flexibilities and protections.
- Implement workplace controls, including engineering controls, administrative controls, safe work practices, and use of personal protective equipment, depending on worker risk of occupational exposure. According to the Department of Labor (the “DOL”), most American workers will likely fall in the lower or medium exposure risk levels.

Guidance on FMLA and ADA

The DOL provided additional guidance on the application of the Family and Medical Leave Act (the “FMLA”) and the Americans with Disabilities Act (the “ADA”).

- Employees who have COVID-19 or whose family members are sick from the virus may be entitled to up to 12 weeks of unpaid, job-protected leave under the FMLA if COVID-19 creates a “serious health condition.” A “serious health condition” under the FMLA means “an illness, injury, impairment or

---

5 Id. at 9.
physical or mental condition that involves inpatient care . . . or continuing treatment by a health care provider.” At this time, leave taken by employees for the purpose of avoiding exposure to COVID-19 would not be protected under the FMLA.

- Federal law does not require employers to provide leave for employees caring for children due to school or child care closures. However, the DOL recommends that employers review their leave policies to consider providing increased flexibility to their employees given the public health emergency.

- Employers can have a policy of sending employees home if they show symptoms of COVID-19 as long as the policy does not discriminate against employees on the basis of race, age, national origin, or other protected characteristics.

- Employers can require an employee to provide a doctor’s note, submit to a medical exam (e.g., temperature check), or remain symptom-free for a certain amount of time before returning to work under the ADA’s “direct threat” exception. Employers are required to notify employees in advance if they plan to require a “fit-for-duty certification.” The DOL notes, however, that it may be difficult for employees to get a doctor’s note as healthcare resources may be overwhelmed. Employers should also keep in mind that state and local laws and/or collective bargaining agreements governing an employee’s return to work may apply.

**Impact of COVID-19 Pandemic Designation on ADA Compliance**

As discussed in our March 10 Memorandum, under the ADA, as a general rule, an employer is prohibited from requiring a medical examination or making a disability-related inquiry unless the employee’s condition could pose a “direct threat” to the workforce. However, the WHO’s designation of COVID-19 as a pandemic, the U.S. Centers for Disease Control and Prevention (the “CDC”)’s COVID-19 risk assessments, and state and local public health agency directives concerning COVID-19 now provide U.S. employers with further “objective evidence” that COVID-19 should be deemed a “direct threat” under the ADA, thereby justifying more proactive steps to protect the workforce, such as mandatory temperature readings. An employer can mitigate the risk of a disability discrimination claim by making clear that additional medical inquiries are intended to ascertain whether employees have symptoms, not whether they have an impairment or other medical condition. It is essential that any temperature readings are applied in a non-discriminatory manner and in the least invasive manner possible. And, any data obtained from checking temperatures or other medical inquiries should be treated as confidential medical information.

---

Impact of Expanded DHS Travel Restrictions

On March 13, the Department of Homeland Security (the “DHS”) announced a new process for U.S. citizens, legal permanent residents, and their immediate families who are returning home after visiting several European countries,8 Iran, and China.9 Under this process, travelers coming back from the restricted countries are required to go through enhanced entry screening upon approval and immediately quarantine themselves at home. In light of this new development, employers would be able to ask employees whether they are affected by the new DHS process and, if so, work from home regardless of whether they have COVID-19 or are experiencing symptoms.

New York State Interim Guidance

On March 11, New York State issued “Interim Guidance for Procedures When Identifying an Employee with Concerns for COVID-19 Exposures” (the “NYS Interim Guidance”).10 The NYS Interim Guidance includes the definitions that New York local health departments use when determining whether to institute mandatory or precautionary quarantine, and provides the following protocols.11

- Required Mandatory Isolation12: Mandatory isolation is required if an individual has tested positive for COVID-19, regardless of whether the individual is displaying symptoms for COVID-19.

- Required Mandatory Quarantine13: Mandatory quarantine is required if an individual has been in close contact (6 ft.) with someone who has tested positive for COVID-19, but is not themselves displaying symptoms.

---

8 These countries include Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland.

12 Isolation “separates sick people with a quarantinable communicable disease from people who are not sick.” See id.

13 Quarantine “separates and restricts the movement of people who were exposed to a contagious disease to see if they become sick.” See CDC, “Legal Authorities for Isolation and Quarantine,” https://www.cdc.gov/quarantine/aboutlawsregulationsquarantineisolation.html.
symptoms for COVID-19, or if the individual has traveled to China, Iran, Japan, South Korea or Italy and is displaying symptoms of COVID-19. If an individual fails to comply with mandatory quarantine, they can be directed by legal order to do so.

- Precautionary Quarantine: Precautionary quarantine is recommended if an individual (i) has traveled to China, Iran, Japan, South Korea or Italy while COVID-19 was prevalent, but is not displaying symptoms, or (ii) is known to have had a proximate exposure to a person who has tested positive for COVID-19 but has not had direct contact with such a person and is not themselves displaying symptoms, or both.

The NYS Interim Guidance urges employers to remind employees that the risk of the coronavirus is not correlated with race, ethnicity, or nationality. It also reiterates that an employer should not make any determinations of risk based on race or country of origin, and should be sure to maintain confidentiality with respect to the identity of employees who are affected by COVID-19.

**New York City Guidance for Non-Healthcare Employers**

On March 13, New York City issued guidance for employers who are in non-healthcare settings (the “NYC Guidance”). In additional to reiterating that employers should create an outbreak response plan, encourage good personal hygiene, and guard against racism and stigma, the NYC Guidance identifies the following other measures an employer may consider taking:

- Social distancing: Employers are encouraged to consider creating staggered work hours for their workforce (e.g., changing some employees’ work hours to 8 a.m. to 4 p.m. while having other employees work from 9 a.m. to 5 p.m.) or permitting flexible work schedules in order to decrease person-to-person contact among employees.

- Disinfection: Employers should disinfect frequently touched surfaces and objects (e.g., drinking fountains and elevator buttons) daily, and when disinfecting, employees should wear and use appropriate personal protective equipment. Hand sinks should have clean running water, soap, and paper towels at all times.

- Keeping Sick Employees Home: If employees, regardless of their recent travel history, have symptoms of an acute respiratory illness including cough, fever, or shortness of breath, employers should recommend that they stay home until they no longer have a fever for at least 72 hours without taking

---

any fever-reducing medications. Also, employers may consider relaxing leave policies to accommodate employees who are feeling sick.

Isolating Employees Who Develop Symptoms at Work: If an employee develops symptoms at work, employers should place the ill employee in a private room away from others and ask them to wear a face mask. Sick employees should be sent home immediately.

The NYC Guidance also provides information about resources available to employers and employees, and encourages employers to ensure that employees are aware of these resources. For example, employers and employees who are feeling distressed or overwhelmed by the outbreak can contact a confidential help line that provides supportive therapy and crisis counseling by trained counselors by calling 888-NYC-WELL (888-692-9355) or texting “WELL” to 65173. Employees who experience discrimination or harassment due to their race, national origin, or other characteristics may lodge a complaint with the New York City Commission on Human Rights by calling 311.\(^\text{15}\)

**Treatment of School Closures Under Current Federal, State and City Leave Laws**

As discussed in our March 10 Memorandum, New York City’s Earned Safe and Sick Time Act requires employers with five or more employees to provide each covered employee who works more than 80 hours per calendar year with up to 40 hours of paid sick leave per calendar year (companies with four or fewer employees must provide up to 40 hours of unpaid leave).\(^\text{16}\) Under the NYC law, employees may use their sick time for, among other reasons, their own illness or health condition, caring for a family member, or when the employer’s business or the employee’s child’s school or day care is closed due to a public health emergency.

There is currently no corresponding provision under the New York State’s Paid Family Leave Act (“PFLA”) to cover a leave necessitated by school or day care closure due to a public health emergency.\(^\text{17}\) The PFLA requires employers to provide eligible employees with job-protected paid leave for, among other reasons, the care of a family member with a serious health condition, but does not cover school closures. Employees are eligible for leave under the PFLA when they have worked 20 hours or more per week for 26 consecutive weeks, or after they have worked for 175 days if working less than 20 hours per week. Eligible employees

---

\(^{15}\) See id.

\(^{17}\) See 12 NYCRR part 380. See also New York State, “How are Paid Family Leave (PFL) and the Federal Family and Medical Leave Act (FMLA) different?,” [https://paidfamilyleave.ny.gov/paid-family-leave-and-other-benefits](https://paidfamilyleave.ny.gov/paid-family-leave-and-other-benefits).
could receive up to 10 weeks of paid leave. The PFLA does not cover an employee’s own serious health condition.

At this time, no federal law requires an employer to provide leave for private sector employees who take off from work to care for healthy children dismissed from school or day care due to a public health emergency. That being said, the DOL encourages employers to “review their leave policies to consider providing increasing flexibility to their employees and their families”\(^{18}\) “given the potential for significant illness under some pandemic influenza scenarios.”\(^ {19}\) In addition, on Saturday, March 14, the House passed H.R. 6201 - the Families First Coronavirus Response Act, which could potentially provide up to three months of paid family and medical leave to certain employees who are affected by school closings, among other things.\(^ {20}\) The House amended the bill on March 16, limiting employees’ eligibility for paid family and medical leave. A more detailed discussion of H.R. 6201 will be provided in an upcoming client alert, after it is passed by the Senate.

The OSHA Guidance can be found here: [https://www.osha.gov/Publications/OSHA3990.pdf](https://www.osha.gov/Publications/OSHA3990.pdf).

The DOL Guidance on FMLA and ADA can be found here: [https://www.dol.gov/agencies/whd/fmla/pandemic](https://www.dol.gov/agencies/whd/fmla/pandemic).

March 17, 2020

Coronavirus Pandemic Portends Heightened Risk of Financial Distress, Potential Changes in Restructuring Market

As the coronavirus (COVID-19) pandemic continues to shake global markets, it is likely that more companies will need to restructure to address liquidity constraints, to right-size their balance sheets, or to implement operational restructurings. In addition to a potential surge in restructurings, the spread of COVID-19 is already having pronounced impacts on companies planning or pursuing restructurings, and further market turmoil may cause even broader changes to the restructuring marketplace.

Potential Increase in Restructuring Activity

COVID-19, and the broader effects it is having on the global economy, increase the likelihood that many companies will need to restructure, whether in- or out-of-court. In light of far-reaching containment efforts adopted by governments and widespread fear of the pandemic, the travel and hospitality sectors face obvious headwinds as a result of COVID-19. Government- and employer-imposed travel restrictions, cancellation of conferences and other large events, and a lack of customer demand are likely to have significant effects on revenues, while businesses operating in these spaces—including airlines, cruise ship operators, and hotels—often have high fixed operating costs. While many of these companies may be able to weather a short slump in activity, the extent and duration of COVID-19’s dampening effect on global travel, and the lingering effects, if any, on consumer confidence, are unknown. If the situation worsens or persists, businesses in the travel and hospitality sectors may need to resort to relief under chapter 11.

The effects of COVID-19 have roiled other industries, especially oil and gas, demonstrating a ripple effect that extends far beyond the travel and hospitality sector. Oil prices have dropped at least 40% this year alone, initially as a result of decreased demand, particularly in China, caused by COVID-19, but more recently compounded by disputes between Saudi Arabia and Russia over price and production cuts. The International Energy Agency’s prediction that global oil-demand in 2020 will decrease for the first time since 2009 underscores the risks to an industry that was already facing widespread financial distress and has been one of the primary distressed sectors seeking relief in chapter 11 over the past several years.

While the travel, hospitality, and energy sectors each face heightened concerns, the spread of COVID-19 is likely to affect all sectors of the economy. Disruptions to global supply chains, particularly those originating in China, combined with overall market volatility and declines in consumer confidence, threaten companies across all industries. Certain sectors that have seen frequent restructurings over the past several years, including retail, health care, and pharmaceuticals may be particularly sensitive to the effects of COVID-19.
Since the conclusion of the 2008 financial crisis, the rate of corporate bankruptcy filings has remained relatively stable and low. Restructuring activity in 2019 increased modestly over 2018, which uptick, some suggested, signaled further distress in 2020 and the beginning of a new cycle of distress. The COVID-19 pandemic amplifies existing economic uncertainty, elevating the probability that restructurings will spike even more in 2020 and beyond.

**Impact on Companies Pursuing Restructurings**

The economic effects of COVID-19 are adding to the challenges faced by companies already undergoing restructuring. Most successful restructurings involve one or more infusions of capital, whether at the outset of the case, in the form of debtor-in-possession financing, or in connection with a company's exit from bankruptcy, often in the form of a rights offering or exit loan facility. Given the turmoil in financial markets, companies are already finding it difficult, and more expensive, to raise sufficient financing to fund or consummate a restructuring, which narrows the restructuring options available to distressed companies. Further, for companies that recently obtained funding commitments, lenders, investors, and backstop parties are considering whether recent events may provide grounds for modifying or terminating these commitments.\(^1\) Similarly, creditors are scrutinizing restructuring support agreements, commonly used to “lock in” creditors to a particular plan of restructuring before a company files for bankruptcy, to assess whether the effects of COVID-19 provide a basis for termination or modification. For parties currently negotiating restructuring support agreements or funding commitments, material adverse effect clauses and other termination provisions can be expected to be highly negotiated, with companies seeking to exclude the effects of COVID-19 and creditors seeking the opposite.

The economic uncertainty caused by COVID-19 has also caused bankruptcy courts to struggle in making necessary factual findings regarding the feasibility of plans of reorganization. Section 1129(a)(11) of the Bankruptcy Code requires, as a condition to confirming any plan, that confirmation of the plan is not likely to be followed by a need for further financial reorganization or liquidation. In making that assessment, courts consider, among other things, the company's post-reorganization capital structure, economic conditions, and the earning power of the debtor's business as demonstrated by its business plan. The effects of COVID-19, however, may call into question the funding commitments that the debtor has secured, as well as the debtor's ability to execute its business plan, making such a determination challenging.

To establish that its business plan is achievable, and that its plan is therefore feasible under the Bankruptcy Code, debtors and their advisors would be well advised to account for the potential effects of COVID-19 on their business, including stress testing financial projections and being prepared to justify those projections.

in light of recent events. Similarly, debtors and their advisors should evaluate whether to discuss COVID-19 among the risk factors set forth in their disclosure statements.  

**Potential Changes in the Restructuring Market**

Over the past decade, companies from all industries have increasingly utilized “prepackaged” and “prearranged” bankruptcies, whereby companies agree on a proposed plan with a sufficient number of creditors before filing for bankruptcy, and then file for chapter 11 relief to quickly implement such deal. For debtors seeking to implement balance-sheet restructurings, prepackaged and prearranged plans afford them the benefit of expedited chapter 11 cases and attendant cost savings. The spread of COVID-19 may slow this trend in two key respects. First, if capital markets tighten and economic uncertainty escalates, distressed borrowers may find it more difficult to obtain the funding commitments necessary to broker consensual and expedited restructurings among their stakeholders, leaving companies with little choice but to seek bankruptcy protection before a consensual deal is reached. Second, extreme market volatility, together with potentially sudden disruptions in supply lines and the disproportionate effects that certain containment measures may have on individual businesses, increases the chances that certain companies will need to resort to chapter 11 relief with little or no advanced planning. Such “free-fall” bankruptcies tend to take longer and be more adversarial.

Significant market disruptions may also lead to an uptick in section 363 sales of substantially all of a debtor’s assets at the very beginning of a bankruptcy case. As demonstrated in the 2008 financial crisis by mega-cases such as *Lehman, General Motors*, and *Chrysler*, the inability to obtain adequate debtor-in-possession financing to operate a large business in chapter 11 may increase the need for quick section 363 sales shortly after the bankruptcy filing. Although some courts have recently questioned the propriety of early-stage sales, a potential financial crisis brought on by COVID-19 may give rise to a return of such strategies.

**UPDATE: Force Majeure Under the Coronavirus (COVID-19) Pandemic**

The coronavirus (COVID-19) pandemic has impacted the ability of businesses around the globe to maintain operations and fulfill existing contractual obligations. In just a matter of days, the World Health Organization (“WHO”) declared COVID-19 a pandemic, governments imposed unprecedented travel, movement, and large-gathering restrictions, U.S. cities and states instituted restrictive interventions, including shuttering public schools and prohibiting dine-in service at restaurants, and companies and organizations from all sectors experienced severe business interruptions or canceled events due to a combination of government regulations on large gatherings and contagion concerns. The fast-paced evolution of the COVID-19 pandemic gives rise to new events every day that affect a party’s ability to excuse contractual nonperformance through either force majeure provisions or other mechanisms. We have also seen a sharp rise in insurance claims for coverage of losses resulting from business interruptions. This memorandum serves as a follow-on to the Force Majeure in the Wake of the Coronavirus (COVID-19) alert issued March 3, 2020, taking into account recent developments and their impact on parties’ ability to invoke force majeure, and outlining alternative common law excuses of nonperformance where contracts are silent on the issue.

**Force Majeure Provisions and the Impact of Recent Events**

As outlined in the March 3 Memorandum, force majeure clauses excuse a party’s nonperformance under a contract when extraordinary events prevent a party from fulfilling its contractual obligations. The applicability of a force majeure provision is contract-specific, and there is a high bar for invocation of such a clause. Recent events, including the declaration of COVID-19 as a “pandemic” and the implementation of travel, movement, and large-gathering restrictions, have altered the force majeure landscape in a manner that may impact the availability of such provisions to nonperforming parties.

In considering the applicability of force majeure, courts look to whether: (1) the event qualifies as force majeure under the contract; (2) the risk of nonperformance was foreseeable and able to be mitigated; and (3) performance is truly impossible. The court’s inquiry largely focuses on whether the event giving rise to nonperformance is specifically listed as a qualifying force majeure in the clause at issue. Even if a party can surmount this requirement, it cannot invoke force majeure if: (1) it could have foreseen and mitigated the potential nonperformance, and (2) performance is merely impracticable or economically difficult rather than truly impossible (unless the specific jurisdiction or contract at issue specifies a different standard). Recent COVID-19 developments may impact whether the outbreak and/or its effects constitute force majeure.
COVID-19’s classification as a “pandemic” by the WHO will trigger a force majeure clause that expressly accounts for “pandemics.” That said, the declaration of pandemic standing alone—without a reference to pandemics in a force majeure clause—will not automatically constitute a force majeure given the courts’ focus on whether the event is specified within the contractual language. Clauses that are silent on pandemics, epidemics, or other viral outbreaks are likely to be insufficient for a force majeure defense due to COVID-19, unless, of course, courts liberalize the force majeure analysis to account for market realities. If a force majeure clause clearly covers COVID-19 as a qualifying event in light of the WHO’s declaration, parties seeking to invoke the provision will not need to establish the event was unforeseeable, but will still need to show: (1) that they took steps to mitigate the damage, and (2) that performance is truly impossible (or meets any other standard the clause requires).

Recent governmental regulations intended to contain the COVID-19 outbreak may similarly make it easier to invoke a force majeure clause not previously triggered by the virus. Ever-expanding governmental restrictions on travel, movement, and large gatherings have resulted in significant business interruptions and widespread event and travel cancellations, with a particularly salient impact on the event, tourism, restaurant, airline, venue rental, and sports and entertainment sectors. On March 15, New York City shuttered tens of thousands of public schools, restaurants and bars in the largest shutdown in the country, and other cities and states instituted similar restrictive interventions. Businesses may be able to invoke force majeure provisions to excuse any contractual nonperformance resulting from these measures if the clauses at issue enumerate governmental orders or regulations that make performance impossible. As with clauses triggered by the WHO’s pandemic declaration, the delineation of governmental regulations making performance impossible does not end the court’s analysis, and parties seeking to avail themselves of force majeure must still establish inability to mitigate, along with impossibility of performance (or any other standard the clause requires). As a result, companies should continue to closely monitor COVID-19 developments and their potential impact on contractual performance, and take and document all reasonable steps to mitigate, where possible, their effect on business operations.

Contracts Lacking Force Majeure Clauses

As the impact of the COVID-19 pandemic magnifies, parties are increasingly looking to their contracts for potential excuses of nonperformance, such as force majeure, only to find their contracts conspicuously silent on the issue. Where this is the case, companies should begin to assess the applicability of alternative common law mechanisms for excuse of nonperformance.

While courts will likely reject a force majeure claim if the parties’ agreement does not contain a force majeure clause, parties seeking to excuse nonperformance may still avail themselves of the common law doctrines of impossibility or, in some jurisdictions, impracticability. These doctrines may excuse nonperformance where a party establishes that: (1) an unexpected intervening event occurred; (2) the parties’ agreement assumed such an event would not occur; and (3) the unexpected event made contractual performance impossible or impracticable.
A party’s nonperformance will not be excused under these principles where the event preventing performance was expected or was a foreseeable risk at the time of the contract’s execution. Even if the event was unforeseeable, courts will still assess whether the “nonoccurrence” of the event at issue was a “basic assumption . . . on which the contract was made.” It is, for example, assumed that the subject of the contract will not be destroyed. It is not, however, considered a “basic assumption” that existing market conditions or the financial situation of the parties will not be disturbed. As a result, mere market shifts or financial inability to perform generally do not constitute unforeseen events the nonoccurrence of which was a “basic assumption” of the contract.

As a general principle, a party assumes the risk of its own subjective incapacity to perform its contractual duties unless the contract envisions otherwise. As a result, courts apply an objective assessment of whether the performance sought to be excused is impossible or impractical—whether the performance is beyond a party’s subjectively-viewed capacity is irrelevant to this analysis. Some jurisdictions, including New York, excuse performance only where it is truly impossible, rather than merely impracticable, which generally requires a showing that destruction of the subject matter of the contract or the means of contractual performance make the satisfaction of obligations impossible. Other jurisdictions, including California, excuse performance where it is impracticable, such that it would require excessive or unreasonable expense. We expect that the COVID-19 pandemic will require courts to address calls to liberalize the doctrines of impossibility and impracticality.

Another common alternative in the absence of a force majeure clause is the doctrine of frustration of purpose. This principle functions similarly to impracticability and impossibility, but focuses on whether the event at issue has obviated the purpose of the contract, rather than whether it has made a party’s contractual performance unviable. Frustration of purpose requires many of the same elements as the principles of impossibility or impracticability, but does not require a supervening event that impedes a party’s performance: (1) an event substantially frustrates a party’s principal purpose; (2) the nonoccurrence of the event was a basic assumption of the contract; and (3) the event was not the fault of the party asserting the defense. The overarching question with respect to frustration of purpose is whether the unforeseeable event has significantly altered the circumstances of an agreement such that performance would no longer fulfill any aspect of its original purpose. There are two primary obstacles to successfully invoking this defense. First, courts interpret a party’s “purpose” broadly, and the mere fact that an event has prevented a party from taking advantage of the agreement in an expected manner may be insufficient. Second, frustration must be near total—it is not enough that a transaction was previously expected to be profitable, but is now unprofitable.

As the COVID-19 pandemic continues to develop, businesses should take proactive steps to ensure continuity of operations sufficient to meet existing contractual obligations and evaluate whether their counterparties are doing the same. If companies expect that COVID-19 may result in their own or their counterparties’ inability to satisfy contractual obligations, they should assess the viability of either force
majeure or common law principles of nonperformance excusal. This assessment may also be rendered more complicated by the fact that many companies will be on both sides of this issue, as the performing party in some cases or the receiving party in others. Further complicating the issue is the reality that the applicable legal standards vary by state, sometimes in an outcome determinative manner. Businesses may wish to avail themselves of a force majeure clause or the common law principles in connection with certain contracts, but resist such a claim by their counterparties to other contracts. Companies will therefore need to be mindful of the broader implications of asserting these provisions and principles.

**Recent Developments Impacting Business Interruption and Contingent Business Interruption Insurance Under the COVID-19 Pandemic**

Companies anticipating potential business interruption should also review potentially applicable insurance policies and provisions, including business interruption and contingent business interruption insurance.

As outlined in the [March 3 Memorandum](#), business interruption insurance is intended to cover losses resulting from direct interruptions to a business’s operations, and generally covers lost revenue, fixed expenses such as rent and utility, or expenses from operating from a temporary location. Similarly, contingent business interruption insurance is intended to cover lost profits and costs that indirectly result from disruptions in a company’s supply chain, including failures of suppliers or downstream customers. While these policies most frequently relate to physical property damage, businesses have increasingly submitted claims for coverage of losses due to business interruptions resulting from COVID-19. The viability of these claims depends on the terms of the insurance policy at issue, but the historical trend, based on prior viral epidemics, has been against coverage for business interruptions related to a pandemic like COVID-19.

In the wake of the Severe Acute Respiratory Syndrome (SARS) outbreak in 2002-2003, many insurers excluded viral or bacterial outbreaks from standard business interruption and contingent business interruption policies. Now faced with claims relating to losses from COVID-19, insurers have largely taken the position that communicable diseases not expressly delineated in the policy at issue are not covered. Some have even released blanket statements regarding COVID-19 confirming that view.

In light of these developments, it is critical that companies proactively assess the specific terms and conditions of their governing insurance policies to determine whether interruptions from the COVID-19 pandemic would be covered, and review their policies’ insurer notice requirements to ensure their scrupulous compliance with those provisions in the event coverage is needed. Insurers should also take proactive measures by reviewing their standard policy language in anticipation of such claims, and preparing themselves for the near-certainty that insurance coverage lawsuits will be filed in connection with uncovered losses.
We will continue to closely monitor the legal and business implications associated with the COVID-19 pandemic and report on further developments.

Ban on Travel from Europe: Additional Details Are Released; the UK and Ireland Are Added to the List

On March 11, President Trump signed a proclamation (available here) that restricts and suspends the entry into the United States of foreign nationals¹ (subject to certain exceptions) that have been physically present within the Schengen Area² during the 14-day period preceding their entry or attempted entry into the United States. The Schengen Area covers much of Europe, but excludes Bulgaria, Croatia, Cyprus, Ireland, Romania and the United Kingdom, among others. This afternoon, at a press conference, Vice President Pence announced that the United Kingdom and Ireland would be added to the list, effective as of midnight EDT, Monday night (March 15), bringing the total number of countries covered to 28.

While the United States cannot bar U.S. citizens from returning to the United States, it can subject U.S. citizens and any others who are not covered by the ban to screening or quarantine procedures. U.S. citizens and others exempt from the ban will be directed to a limited number of airports where screening can take place, as set out in a Notice of Arrival Restrictions (the “Notice”) issued by the Department of Homeland Security (“DHS”) (press release available here and fact sheet available here).

Similar proclamations issued earlier in the year restricted and suspended the entry into the United States of persons who were physically present in China³ and Iran⁴ during the 14-day period preceding their entry or attempted entry into the United States, subject to certain exceptions.

The ban is now in effect and will remain so until terminated by the President. In a televised address delivered by the President on March 11 announcing the ban, the President indicated that the travel ban will be in effect for a period of 30 days. The ban does not cover travel from the United States, although with

¹ The proclamations use the term “alien,” which is defined in the U.S. Code (8 U.S. Code §1101) as any person not a citizen or national of the United States.
² The Schengen Area countries include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden and Switzerland.
³ Proclamation on Suspension of Entry as Immigrants and Nonimmigrants of Persons who Pose a Risk of Transmitting 2019 Novel Coronavirus, January 31, 2020 (available here).
⁴ Proclamation on Suspension of Entry as Immigrants and Nonimmigrants of Persons who Pose a Risk of Transmitting 2019 Novel Coronavirus, February 29, 2020 (available here).
many wishing to avoid international travel and with the likely drastic reduction in transatlantic flights, those seeking to return to Schengen Area countries may face significant challenges.

**Exceptions**

The ban does not apply, in addition to U.S. citizens, to the following persons:

- any foreign national who is a lawful permanent resident of the United States;
- any foreign national who is the spouse of a U.S. citizen or lawful permanent resident;
- any foreign national who is the parent or legal guardian of a U.S. citizen or lawful permanent resident, provided that the U.S. citizen or lawful permanent resident is unmarried and under the age of 21;
- any foreign national who is the sibling of a U.S. citizen or lawful permanent resident, provided that both are unmarried and under the age of 21;
- any foreign national who is the child, foster child or ward of a U.S. citizen or lawful permanent resident, or who is a prospective adoptee seeking to enter the United States pursuant to the IR-4 or IH-4 visa classifications;
- any foreign national traveling at the invitation of the U.S. Government for a purpose related to containment or mitigation of the virus;
- any foreign national traveling as a nonimmigrant pursuant to a C-1, D or C-1/D nonimmigrant visa as a crewmember or any foreign national otherwise traveling to the United States as air or sea crew;
- any foreign national (A) seeking entry into or transiting the United States pursuant to one of the following visas: A-1, A-2, C-2, C-3 (as a foreign government official or immediate family member of an official), E-1 (as an employee of TECRO or TECO or the employee’s immediate family members), G-1, G-2, G-3, G-4, NATO-1 through NATO-4 or NATO-6 (or seeking to enter as a nonimmigrant in one of those NATO categories); or (B) whose travel falls within the scope of section 11 of the United Nations Headquarters Agreement;
- any foreign national whose entry would not pose a significant risk of introducing, transmitting or spreading the virus, as determined by the Secretary of Health and Human Services, through the CDC Director or his designee;
- any foreign national whose entry would further important United States law enforcement objectives, as determined by the Secretary of State, the Secretary of Homeland Security or their respective designees, based on a recommendation of the Attorney General or his designee;
- any foreign national whose entry would be in the national interest, as determined by the Secretary of State, the Secretary of Homeland Security or their designees; or
- members of the U.S. Armed Forces and spouses and children of members of the U.S. Armed Forces.
**Arrival Procedures**

The Notice states that U.S. citizens (and presumably others exempted from the ban) travelling (or returning) to the United States will be required to travel to one of 13 airports. The Notice contemplates that the Transportation Safety Administration, Customs and Border Protection (“CBP”) and air carriers are working together to identify qualifying passengers before their scheduled flights; they are to be rerouted (according to the Notice, at no cost to them).

Upon arrival, following standard customs processing, arriving passengers will go through enhanced CBP screening with a medical interview, which includes “contact information for local health officials.” Thereafter, passengers will be expected to self-quarantine for 14 days, while those who are symptomatic (according to a schematic embedded in the Notice) will be “referred to” the Centers for Disease Control and Prevention for medical evaluation. It is unclear what that referral entails.

The Notice states that local and State public health officials will contact individuals in the days and weeks following arrival, presumably based on the information provided as part of the screening. It is unclear how expatriates or others who are not returning to a known community will be able to provide this information. Although it is clear from the proclamation that all Americans are exempt from the ban (and therefore go through the screening procedures), the DHS press release speaks in terms of Americans “who are returning home after recently visiting” countries covered by the ban.

We are continuing to monitor the situation and will update this alert as more details become available.

COVID-19: SEC Provides Investment Advisers Whose Operations Are Disrupted by Coronavirus with Extensions for Form ADV and Form PF

The SEC has issued an Order providing investment advisers who are unable to meet a filing deadline or delivery requirement due to circumstances related to current or potential effects of coronavirus (COVID-19) with a 45-day extension to file or deliver, as applicable, an annual amendment to Form ADV and Form PF. Examples of such circumstances include disruptions to transportation and the imposition of quarantines, which may limit investment advisers’ access to facilities, personnel, and third party service providers. The relief is limited to filing or delivery obligations, as applicable, for which the original due date is between March 13, 2020 and April 30, 2020.

In order to rely on the relief, an investment adviser must notify the SEC via email that it is relying on the Order and provide a description of the reasons why it could not file or deliver the applicable form on time and an estimated date by which it expects to file or deliver such form. With respect to Form ADV, an investment adviser must also disclose this information on its public website (or if it does not have a public website, promptly notify its clients and/or private fund investors).

The SEC issued a similar Order with respect to registered funds whose operations may be affected by coronavirus.

The Impact of COVID-19 on Performance-Based Compensation Programs

As the coronavirus disease (COVID-19) pandemic continues and the economic consequences are becoming increasingly severe, this Client Memorandum examines its impact on public company compensation programs at this time of economic uncertainty and market volatility. In particular, we focus on the structure of performance-based compensation, in light of many companies adjusting their forecasts and announcing they will not meet first quarter guidance in light of the effects of COVID-19. This issue is particularly timely for companies whose Compensation Committees are in the process of being asked to approve executive compensation programs at regularly scheduled Board meetings or are in the process of mailing proxies for their annual shareholder meetings that describe such programs.¹

If companies have set 2020 performance targets for their compensation programs (even if very recently), it very well may be appropriate and necessary to adjust those targets, since the dramatic shift in the economic forecast has rendered those targets seemingly impossible to reach. Without making appropriate adjustments to incentive compensation programs to account for the impact of COVID-19, companies run a risk of not properly incentivizing and compensating their employees at a time that increased dedication is necessary to maintain company stability. This issue is compounded by the fact that stock prices have as a general matter declined by more than 20%, and most senior executives will likely have experienced a decrease in the value of their compensation due to the heavy weighting of executive compensation towards equity.

We recommend companies review their compensation programs more broadly to assess any other actions that need to be taken. For example, public companies should review their equity plans to assess if they have sufficient authorized share capacity to cover equity grant needs, and if it is necessary or desirable to amend their equity plans and request from shareholders an increase in the number of shares available in order to compensate executives and employees with equity awards. Stock price drops mean more shares will be needed to deliver the same value to employees who are paid in equity, and prior projections of burn rates may no longer be sufficient. Since such amendments require shareholder approval, careful consideration will need to be given prior to seeking such approval which will require an explanation of the reason for the requested increase as well as the potential impact (including dilution and burn rate). Companies may also want to consider whether this is an appropriate time to consider a shift to stock options, in light of market corrections, and whether any outstanding stock options should be repriced. Repricings require shareholder

¹ For additional guidance in navigating this crisis, visit our Coronavirus (COVID-19) Resource Center.
approval under exchange listing rules, unless a company’s plan explicitly authorizes them, and such plan provisions are disfavored by the proxy advisory firms and institutional investors.

**Structuring Compensation Programs in Uncertain Times**

Compensation packages at public companies are typically focused on maintaining alignment between performance and executive pay, and even broad-based bonus programs are often funded as a percentage of a cash flow metric such as EBITDA, subject to achieving hurdle targets. Since the imposition of mandatory say-on-pay votes in 2011, public companies are also increasingly focused on structuring their executive compensation programs to align with the voting policies of proxy advisory firms, such as ISS and Glass Lewis, and the guidelines of institutional investors.²

This has resulted in many public companies having a significant portion of executive compensation allocated to formulaic performance-driven programs, both for annual bonuses (usually paid in cash) and long-term incentive programs (most typically paid in equity). Although many bonus programs are still discretionary or determined by reference to various performance metrics that act as guideposts, with Board discretion as to their application, there has been a shift over the past ten years to more formulaic programs. For many public companies, a large portion of bonus payments to executives are now generally paid on pre-set performance metrics, and a significant portion of equity awards (in some cases, up to 100% for a CEO) are granted in performance stock units with rolling multi-year performance cycles (most typically three years). Metrics often tie to a combination of operational and financial metrics, and, according to a F.W. Cook 2019 survey of the largest 250 publicly traded companies, 65% of those companies in the United States use an absolute or relative total shareholder return (“TSR”) metric in structuring their compensation programs.

**Setting 2020 Performance Metrics**

Many calendar year companies set performance goals in the first quarter of the year and have already set performance goals for annual bonuses for 2020 and equity grants with performance cycles beginning in 2020. We discuss how adjustments to these goals may be made below. However, a significant number of companies still have time to set these goals. Compensation Committees that are still determining the goals for their 2020 programs have the opportunity now to consider how to set performance targets that take into account any impact from the COVID-19 pandemic. For companies in this position, there are a number of options to consider:

---

² The assessment of “pay for performance” by the proxy advisory firm, ISS, is largely driven by a quantitative assessment of the relationship between the amount of reported compensation to a company’s CEO and the company’s stock price performance and returns to shareholders through dividends.
“Wait and see”— set 2020 targets in the second quarter, or later for long-term programs

For companies that still have the flexibility to do so, we recommend considering a delay in setting performance goals, given current marketplace uncertainty and volatility and the limited bandwidth of Board members and management due to their necessary focus on core business and employee safety issues.

We see no meaningful obstacles to taking this approach. However, if setting goals is deferred beyond the end of the second quarter for calendar year companies, proxy advisory firms and investors may not view them as meaningful, but instead consider them as already “in the bag” for annual bonus program purposes.  

Set target thresholds taking into account adjusted budgets and forecasts

For companies that have already adjusted 2020 budgets to take into account COVID-19 impacts, newly set performance targets should take into account the current and projected impact on revenue and stock price performance, to the extent known, but since there is so much uncertainty as to how 2020 will play out, this alternative may not be a feasible alternative for many companies.

Draft broad performance-metric adjustment provisions

Typically, performance-based compensation programs include provisions that permit adjustments for extraordinary, non-recurring events, such as acquisitions, dispositions and changes in the accounting rules. Companies and Compensation Committees should consider drafting these adjustment provisions so as to provide authority to the Compensation Committee to adjust performance targets to take into account COVID-19 related impacts. The challenge in drafting such adjustment provisions will be to do so in a targeted way (e.g., adjustments for financial statement impacts due to displacement of workers or impacts on supply delivery) so that the proxy advisory firms and institutional investors will not view the programs as discretionary rather than performance based.

Consider alternative metrics for 2020, such as qualitative performance measures, including successful implementation of measures to protect employees, or relative TSR instead of absolute TSR

Set up programs that take into account performance in a less formulaic manner, with performance metrics as guideposts rather than formulas. Although these are not preferred by the proxy advisory firms, we think they make sense during a time of crisis in order to place the appropriate obligations on a Board to exercise its fiduciary duties to reward executives at the end of the performance cycles, rather

---

3 Under the pre-2018 Tax Reform regime, performance metrics had to be set within 90 days of the beginning of a performance period (March 30/31 for calendar year companies) to receive favorable tax treatment, but this requirement no longer applies.
than putting in place formulaic plans that cannot fully anticipate whether COVID-19 is a short- or long-term issue.

- Consider providing a range of performance targets based on the range of impact by COVID-19 (for instance, setting “high,” “medium” and “low” impact ranges), and/or build in a mechanism for a true-up within a certain time period to provide for adjustment based on impact

- Consider changing the equity mix and granting stock options, taking into account how the market correction has made these more attractive instruments from an employee incentive perspective

**Should You Adjust Existing Performance Targets?**

For companies that have already set 2020 targets for their incentive compensation programs, or have long-term incentive awards outstanding that have multi-year performance periods that are ongoing, their Compensation Committees should consider whether to adjust current performance targets to take into account the impact of COVID-19, or to wait and see whether and how to make adjustments until later in the performance period. Since companies are likely to be criticized for adjusting their targets multiple times, we think it is reasonable to take a wait and see approach.

If a Compensation Committee is inclined to make adjustments, the first question will be whether the existing program documents permit adjustments to targets for extraordinary non-recurring events that could be interpreted to permit an adjustment for COVID-19 related events. If so, the Compensation Committee’s position can be that the adjustment is hard-wired into the award.

If a company’s compensation programs do not include adjustment provisions that could permit a COVID-19 related performance adjustment, Compensation Committees generally still have the authority to do so, although, in that case, there is more likely to be accounting as well as disclosure implications, and related press and employee morale issues to navigate. Companies should consult with their accountants as to whether adjustments would trigger charges and whether any applicable charges will be impacted by the timing of making adjustments. If you have a performance period that started prior to November 2017, we recommend you consult with your tax attorneys to assess whether such an adjustment would cause payments under the program to lose grandfathered deductible tax treatment for qualified performance-based compensation that existed prior to Tax Reform.

In the case of performance-based equity incentive compensation, most equity plans provide the Board of Directors or Compensation Committee flexibility to amend outstanding equity awards without going to shareholders or the participants, unless doing so would materially adversely affect the participants. In the past, companies have availed themselves of this option to amend and/or terminate outstanding equity awards due to external factors that affect performance. For example, after Hurricane Katrina, many companies with facilities based in New Orleans either amended the performance targets for certain
performance-based equity awards, or terminated the awards altogether and replaced them with new equity awards that had revised performance targets.

Similarly, many cash-based bonus plans have broad adjustment and amendment provisions that companies can refer to when deciding whether to adjust performance targets.

How companies answer these questions and the timing of making adjustments will turn in large part on the nature of each company’s business and operations. For instance, airlines that are affected by restrictions on travel, cruise lines that have suspended operations and companies whose manufacturing facilities have been impacted will likely have a more pressing need to revisit and adjust performance targets for this fiscal year to account for the impact of COVID-19. However, as the effects of COVID-19 on the economy are still uncertain at this time, it is likely that many companies will take a wait and see approach. It is also possible that some goals, particularly for bonus plans, may be restructured so that the goals are semi-annual or reflect a shorter performance period in order to keep the executive team motivated at a time it is under increased pressure.

**Additional Considerations When Setting or Adjusting Performance Targets**

When setting or adjusting performance targets, a company will need to take into account several additional factors, including SEC disclosure requirements, investor reactions, employee morale, impact on the next say-on-pay vote and accounting considerations.

The Board’s assessment of how to set or adjust performance metrics is part of its overall executive compensation oversight function and exercise of its fiduciary duties, and its Compensation Committee will want to thoughtfully consider the impact of performance metric decisions on the overall target level of compensation for executive officers. The proxy advisory firms largely assess “pay for performance” based on how CEO compensation compares to TSR, and companies may feel pressure to recalibrate the amount of executive compensation if their TSRs are being significantly impacted. We would recommend that Compensation Committees avoid reaching this conclusion without a thoughtful analysis of what is necessary to incentivize and retain management teams at a time that their dedication is more important than ever to maintain business stability in the face of events entirely outside their control. If existing goals will not be adjusted, consider adding bonus programs that reward executives for maintaining the business and providing stability to employees and the overall economy.

If a public company adopts or modifies an incentive plan or award to set or adjust performance targets to account for the impact of COVID-19, it may be required to report such adoption or modification on a Form 8-K if certain executive officers are party to or are participants in the applicable plan or award, the adjustments are material and not pursuant to an existing adjustment provision. However, this does not apply to broad-based plans. Under Item 5.02(e) of Form 8-K, if a registrant enters into, adopts or otherwise commences a material compensatory plan, contract or arrangement (whether written or not written) as to
which the registrant's principal executive officer, principal financial officer or a “named executive officer” (i.e., the chief executive officer, the chief financial officer and the three most highly compensated executive officers) participates or is a party, or such compensatory plan, contract or arrangement is materially amended or modified, then the registrant must provide a brief description of the terms and conditions of the plan, contract or arrangement and the amounts payable to the officer thereunder.

In addition, any changes to performance targets for incentive compensation of the “named executive officers” of a public company will also likely be disclosed in the company’s annual proxy statement. The company may need to consider disclosing the rationale behind setting and/or adjusting its performance targets, whether as part of the compensation discussion and analysis section or through footnotes to the compensation tables. Careful thought should also be given to shareholder and employee reactions to these changes and related disclosures.

As the situation with the COVID-19 pandemic is rapidly changing, we recommend that companies seek legal advice to stay abreast of additional developments. We will continue to monitor developments and keep clients apprised of pertinent information.

COVID-19: Debt Buyback Considerations

As market reaction to COVID-19 leads to declining trading prices for bank loans and notes, many debt issuers (and, in some cases, their private equity sponsors) are considering repurchasing their outstanding debt to capture discount. This memorandum highlights certain considerations that well-advised debt issuers and private equity sponsors should take into account in analyzing these potential debt buybacks.

Liquidity

As a threshold matter, before a debt issuer voluntarily repurchases outstanding debt, the issuer should undertake a full analysis of the issuer’s forecast liquidity. Generally speaking, liquidity is paramount, and debt repurchases by a debt issuer should only be made if there is sufficient liquidity to operate the business, including in a downside scenario. If a debt issuer that is owned by a private equity sponsor is liquidity-constrained, it may be worth considering whether the private equity sponsor could instead purchase outstanding debt.

Provisions in Debt Documents relating to Debt Buybacks

Provisions in debt documents governing debt buybacks vary based on who is purchasing the debt. There are three types of possible debt purchasers that are worth considering: (a) the debt issuer and its subsidiaries (the “Company”), (b) affiliates of the debt issuer that control the debt issuer through their equity ownership and that are not bona fide debt funds (“Affiliated Lenders”) and (c) affiliates of the debt issuer that are bona fide debt funds (with such persons generally acting independently of the underlying private equity business that owns the debt issuer) (“Affiliated Institutional Lenders”).

Additionally, the provisions applying to each of these purchasers differ in notes indentures and credit agreements. Finally, there also are a number of covenants in debt documents that could potentially be implicated by debt buybacks by the Company.

- Notes Indentures

  Notes indentures generally do not restrict the repurchase of notes issued thereunder by the Company, Affiliated Lenders or Affiliated Institutional Lenders. Notes owned by such persons, however, typically are disregarded and deemed not to be outstanding for voting purposes. Moreover, purchased notes generally are not automatically cancelled (with such notes typically only cancelled when surrendered to the trustee for cancellation).
Credit Agreements

Credit agreement provisions relating to loan purchases by Affiliated Institutional Lenders, Affiliated Lenders and the Company generally are more complicated than analogous provisions in notes indentures. For example:

- **Affiliated Institutional Lenders**: Credit agreements often do not restrict Affiliated Institutional Lenders from acquiring or holding loans. In addition, Affiliated Institutional Lenders often are able to vote their loans for purposes of approving amendments or consents (but often with the prohibition on these loans constituting more than 49.9% of the loans approving any amendment or consent).

- **Affiliated Lenders**: Affiliated Lenders generally only may purchase term loans (and not revolving loans) of up to a specified percentage of term loans outstanding (often 25-30%) on a non-pro rata basis through Dutch auction procedures or open market purchases. Affiliated Lenders acquiring loans usually are permitted to continue to hold the purchased loans (without any requirement to retire them). Affiliated Lenders, however, generally are not permitted to vote the loans they hold (with certain exceptions for matters disproportionately affecting them), with such loans being disregarded for voting purposes. Moreover, Affiliated Lenders generally are prohibited from attending lender meetings and receiving certain information provided by the administrative agent to lenders.

- **Company**: The Company generally only is permitted to repurchase term loans (and not revolving loans) on a non-pro rata basis through Dutch auction procedures or open market purchases. There usually is no cap on Company repurchases, as loans repurchased by the Company are typically deemed cancelled upon acquisition thereof. Additionally, some credit agreements also prohibit the use of proceeds of revolver borrowings to acquire debt.

It is worth noting that credit agreements generally do not restrict purchases of participations in loans by such persons, which could be an alternative path to a debt buyback. Moreover, it also may be possible to realize the economics associated with a debt buyback through using derivatives such as total return swaps, which also may allow a private equity sponsor to obtain leverage in connection with a debt buyback and avoid the issues discussed above.

Finally, there also are a number of covenants in debt documents that could potentially be implicated by debt buybacks by the Company. Covenants that may need to be assessed include: restricted payment or junior debt prepayment covenants and, in the case of any debt exchange or transaction involving the incurrence of new indebtedness, debt and liens covenants.
Securities Laws and Anti-Fraud Principles

Any person considering debt buybacks also will need to consider issues related to debt buybacks that may arise under applicable securities laws and general anti-fraud principles. As a threshold matter, it is important to recognize that notes are securities, and bank loans generally are not considered securities. As such, the securities laws apply to any notes purchases, but likely do not with respect to bank loan purchases (although general anti-fraud principles may apply). As a result, you generally cannot purchase notes while in possession of material non-public information. Many issuers and private equity sponsors adopt similar policies which prohibit the purchase of bank loans while such issuers or sponsors are in possession of material non-public information. Any Company or sponsor insider trading policies (including with respect to trading windows) would need to be considered and followed.

Corporate Governance Matters

Debt buybacks by private equity sponsors also may require consideration of certain corporate governance issues, including with respect to (1) the corporate opportunity doctrine and (2) ongoing corporate governance.

* Corporate Opportunity Doctrine

The corporate opportunity doctrine prohibits corporate directors and officers and equity owners from usurping corporate opportunities for their own benefit. It is possible that the opportunity to purchase debt at a discount may be viewed as a corporate opportunity that belongs to the Company. This opportunity should not be wrongly usurped by the private equity sponsor. Unless the Company’s charter formally waives the application of this doctrine, it may be prudent to have the Company first consider the debt buyback opportunity and formally decline to pursue it. The decision to formally decline to pursue such an opportunity would best be made by directors who are independent of the private equity sponsor (if there are such persons). A lack of sufficient liquidity (or a decision to allocate liquidity to other opportunities) may be a strong basis for a Company to decline to pursue a debt buyback opportunity. In addition, where the potential consequences to the Company raised by some of the tax issues described below can be mitigated by having a private equity sponsor repurchase the debt,

---

1 Despite the general prohibition on purchases of notes while in possession of material non-public information, certain issuers and private equity sponsors are willing to purchase notes while they may be in possession of material non-public information where the counterparty is sophisticated and enters into a “big boy” letter acknowledging the potential information disparity. A fulsome discussion of “big boy” letters is beyond the scope of this memorandum, but it is worth noting that issuers and private equity sponsors take different views on them, with some issuers and private equity sponsors willing to trade on them and others not.
they also may provide a basis for the Company to decline to pursue a debt buyback in favor of the private equity sponsor.

**Ongoing Corporate Governance**

If a private equity sponsor purchases debt in a portfolio company, the private equity sponsor’s ability to exercise governance rights on a go-forward basis with respect to the Company may become limited where the Company’s solvency comes into question. In such situations the private equity sponsor may be conflicted as a result of being both a significant creditor of the Company and its equity holder. In such cases, directors that are not independent from the private equity sponsor may be required to recuse themselves from board decisions related to the Company’s capital structure or any future restructuring involving the Company. This could result in control of future capital structure and restructuring decisions being ceded to board members who are independent of the private equity sponsor. If such a conflict scenario is a possibility, it may be prudent to appoint independent board members well in advance of the consideration of any potential conflict transaction.

**Bankruptcy Issues**

Debt buybacks by private equity sponsors also may implicate certain bankruptcy issues, including potential equitable subordination challenges. Equitable subordination is an extraordinary remedy pursuant to which a bankruptcy court may, under principles of equity, subordinate the recovery of certain claims until other claims are first satisfied. For equitable subordination to apply, a court must find that a creditor engaged in inequitable conduct that resulted in injury to other creditors. The mere fact that a private equity sponsor purchased debt in a portfolio company on an arm’s length basis would not support a claim to equitably subordinate such debt. Instead, courts require some other form of inequitable conduct, although such inequitable conduct need not necessarily arise in connection with the acquisition of the issuer’s debt.

**U.S. Federal Income Tax Issues**

A lengthy discussion of U.S. federal income tax issues associated with debt buybacks is beyond the scope of this memorandum. It is, however, worth highlighting two issues that may arise in the context of debt buybacks: cancellation of indebtedness income and related party issues.

**“Cancellation of Indebtedness Income” or “CODI”**

In the most basic scenario, when a Company fails to repay a loan for whatever reason the Company may recognize cancellation of indebtedness income (“CODI”) to the extent of the loan forgiveness. Depending on the Company’s tax attributes and tax position, this CODI may create a cash tax liability or, in a number of ways, reduce the Company’s tax attributes such as net operating losses or “NOLs”.
If a Company (for these purposes including subsidiaries) or an entity related to the Company under relevant tax rules (e.g., a private equity sponsor that owns the Company) buys back debt in the market at a discount, the repurchase transaction is, in effect, treated as if the Company did not repay the loan to the extent of the discount on the repurchase, which creates CODI for the Company with the same consequences as if the lender forgave the loan. U.S. federal income tax law also recognizes an insolvency exception to CODI that may be available to a Company in certain circumstances.

CODI as a result of loan forgiveness and debt buybacks can be particularly challenging from a tax perspective with respect to entities treated as partnerships for U.S. Federal income tax purposes, so it is important to model any consequences with a partnership borrower.

- Issues with Holding Repurchased Loans

In a case where the loan remains outstanding after a related party purchase, e.g., where the loan is held by the private equity sponsor, the loan is treated as deemed reissued generally with a new issue price equal to the purchase price (in effect, the discount becomes original issue discount on the deemed newly issued loan). This can have an impact on the future interest and original issue discount (“OID”) profile for the loan. Moreover, in many cases the interest and OID may be subject to deductibility limitations at the Company-level going forward, which may create an inefficient mismatch from a tax perspective as the Company may never be able to deduct the interest/OID on the reissued loan, but the private equity sponsor may have to pick up the interest/OID income.

Where a related private equity sponsor holds a US portfolio company’s loan after a repurchase, the Company and the private equity sponsor should consider whether the interest may be subject to a 30% withholding tax with respect to non-US investors in the fund (including non-US corporate “feeder funds” or “blockers”). The most common exemption from U.S. withholding tax—the portfolio interest exemption—may not be available with respect to interest paid on debt of US companies held by related parties such as a private equity sponsor. These rules, and potential tax leakage they create, should be carefully considered, along with the availability of additional exemptions such as those under tax treaties between the U.S. and certain non-U.S. countries.

As a result of the deemed reissuance that occurs as described above, the repurchased debt may cease being fungible with the other outstanding debt, which could have an impact on liquidity and pricing for future debt sales.

In some cases where a private equity sponsor (and not the Company itself) purchases the debt at a discount, it may be possible to structure the repurchase to avoid the related party rules described above (including through the use of derivative structures) and avoid triggering the Company-level CODI and holder-level consequences, but these structures are very fact specific.
Private Fund Issues

If a private equity sponsor is anticipating the purchase of debt securities, the private equity sponsor may have a host of fund-level considerations that need to be analyzed, including (1) the private equity fund’s investment mandate, (2) conflict of interest issues that may arise with respect to the various funds or accounts managed, (3) issues related to fund-level borrowings if leverage is to be utilized and (4) co-investor issues. A discussion of these issues is beyond the scope of the memorandum, but significant workplanning with respect to these issues may be required.

The United States Imposes a Ban on Travel from Schengen Area Countries

On March 11, President Trump signed a proclamation (available here) that restricts and suspends the entry into the United States of foreign nationals1 (subject to certain exceptions) that have been physically present within the Schengen Area2 during the 14-day period preceding their entry or attempted entry into the United States. The Schengen Area covers much of Europe, but excludes Bulgaria, Croatia, Cyprus, Ireland, Romania and the United Kingdom, among others. While the United States cannot bar U.S. citizens from returning to the United States, it can subject U.S. citizens and any others who are not covered by the ban to screening or quarantine procedures. American citizens and others exempt from the ban will be directed to a limited number of airports where screening can take place.

Similar proclamations issued earlier in the year restricted and suspended the entry into the United States of persons who were physically present in China3 and Iran4 during the 14-day period preceding their entry or attempted entry into the United States, subject to certain exceptions.

The ban announced last night will not apply to the following persons:

- any lawful permanent resident of the United States;
- any foreign national who is the spouse of a U.S. citizen or lawful permanent resident;
- any foreign national who is the parent or legal guardian of a U.S. citizen or lawful permanent resident, provided that the U.S. citizen or lawful permanent resident is unmarried and under the age of 21;
- any foreign national who is the sibling of a U.S. citizen or lawful permanent resident, provided that both are unmarried and under the age of 21;

1 The proclamations use the term “alien,” which is defined in the U.S. Code (8 U.S. Code §1101) as any person not a citizen or national of the United States.
2 The Schengen Area countries include: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and Switzerland.
3 Proclamation on Suspension of Entry as Immigrants and Nonimmigrants of Persons who Pose a Risk of Transmitting 2019 Novel Coronavirus, January 31, 2020 (available here).
4 Proclamation on Suspension of Entry as Immigrants and Nonimmigrants of Persons who Pose a Risk of Transmitting 2019 Novel Coronavirus, February 29, 2020 (available here).
any foreign national who is the child, foster child or ward of a U.S. citizen or lawful permanent resident, or who is a prospective adoptee seeking to enter the United States pursuant to the IR-4 or IH-4 visa classifications;

any foreign national traveling at the invitation of the U.S. Government for a purpose related to containment or mitigation of the virus;

any foreign national traveling as a nonimmigrant pursuant to a C-1, D, or C-1/D nonimmigrant visa as a crewmember or any foreign national otherwise traveling to the United States as air or sea crew;

any foreign national (A) seeking entry into or transiting the United States pursuant to one of the following visas: A-1, A-2, C-2, C-3 (as a foreign government official or immediate family member of an official), E-1 (as an employee of TECRO or TECO or the employee’s immediate family members), G-1, G-2, G-3, G-4, NATO-1 through NATO-4, or NATO-6 (or seeking to enter as a nonimmigrant in one of those NATO categories); or (B) whose travel falls within the scope of section 11 of the United Nations Headquarters Agreement;

any foreign national whose entry would not pose a significant risk of introducing, transmitting or spreading the virus, as determined by the Secretary of Health and Human Services, through the CDC Director or his designee;

any foreign national whose entry would further important United States law enforcement objectives, as determined by the Secretary of State, the Secretary of Homeland Security, or their respective designees, based on a recommendation of the Attorney General or his designee;

any foreign national whose entry would be in the national interest, as determined by the Secretary of State, the Secretary of Homeland Security, or their designees; or

members of the U.S. Armed Forces and spouses and children of members of the U.S. Armed Forces.

The ban will take effect at 11:59 pm EDT on March 13 and will not apply to persons aboard a flight scheduled to arrive in the United States that departed prior to 11:59pm on March 13. The ban will remain in effect until terminated by the President. In a televised address delivered by the President on March 11 announcing the ban, the President indicated that the travel ban will be in effect for a period of 30 days. The President in his address also included cargo and other trade, but that was reversed in a subsequent tweet and, in fact, the authority relied upon for the restriction (principally, Sections 212(f) and 215(a) of the Immigration and Nationality Act) only applies to human beings.

In a statement issued on March 11 (the “Wolf Statement”), U.S. Department of Homeland Security Acting Secretary Chad F. Wolf noted that the Department will publish in the next 48 hours “a supplemental Notice of Arrivals Restriction requiring U.S. passengers that have been in the Schengen Area to travel through select airports where the U.S. Government has implemented enhanced screening procedures.”
The ban does not cover travel from the United States, although with many wishing to avoid international travel and with the likely drastic reduction in transatlantic flights, those seeking to return to Schengen Area countries may face significant challenges.

Even for those able to travel back to (or to) the United States once the ban takes effect, it is unclear how easily the screening process can be implemented and, in fact, what it will entail. Since the ban applies to persons who were in Schengen Area countries during a specified period, in theory any person (regardless of nationality) arriving from outside the United States could technically be covered, either for screening (if exempt) or denial of entry. It is also unclear which airports will be designated for screening. Moreover, it is unclear how travel from airports in other parts of the world will be monitored, and whether, among other effects, Global Entry/Nexus will be suspended and what the ultimate impact will be on waiting times at ports of entry.

There is limited information available at this time – the text of the Proclamation, a White House fact sheet and the Wolf Statement. We are monitoring the situation and will update this alert as more details become available.

COVID-19: Certain Considerations for Hedge Fund Managers

The outbreak of the coronavirus (COVID-19) continues to impact markets and businesses in myriad (and uncertain) ways, creating a variety of challenges, as well as opportunities, for hedge funds. Hedge fund managers should consider the following steps to best position themselves and their funds to tackle these issues.

Understand the Fund’s Liquidity Tools

The recent market turmoil arising from COVID-19 may result in an increase in withdrawal/redemption requests for the upcoming liquidity cycles and/or a decrease in the liquidity or intrinsic value of certain portfolio holdings. Hedge fund managers should understand—and be prepared to implement—the full suite of tools available under their fund documents.

Mechanisms such as gates, side pockets, in-kind distributions and suspensions can help manage investor liquidity requests as well as address investments that, due to exigent circumstances, experience less liquidity or cease to reflect the assets’ intrinsic value. However, each of these tools is typically subject to certain procedural, timing and approval parameters that should be followed in order to implement them in the most efficient and legally protective manner. For example, fund documents often require the definitive steps for a liquidity tool to be taken prior to the effective time of the relevant withdrawal (e.g., before close of business on the last business day of the quarter), or to be approved by the fund’s directors or an independent committee.

Managers should ensure that they and any directors or committee members understand how each of these mechanisms operates and how each can be a useful tool under the circumstances, as well as what needs to be done in order to implement them properly should the need arise.

At the same time, hedge fund managers should review existing side letters for any limitations or exceptions to their ability to implement restrictive liquidity measures, either in general or in the event of significant drawdowns or exceptional market circumstances.

Check in with Key Service Providers

Like any business, hedge funds depend on a variety of service providers on a daily basis. As the COVID-19 outbreak disrupts day-to-day operations across the market, hedge fund managers may want to consider reaching out to critical service providers such as brokers, custodians, administrators and IT providers—and directors or independent committee members—to ensure that these service providers have business
continuity plans in place that will enable them to remain reachable and functioning with as little disruption as practicable going forward.

**Review Financing Documents**

Managers should consider reviewing their funds’ financing contracts and reaching out to lending counterparties to get ahead of any NAV triggers, margin calls or other contingent obligations that may arise in connection with outstanding transactions.

**Refresh Business Continuity Plans and Insurance Coverage**

As with external service providers, the COVID-19 outbreak provides a logical opportunity for hedge fund managers to review their own business continuity plans, including considering how their systems would handle a scenario in which personnel are required to work remotely for an extended period. Managers may also want to consider reviewing or expanding the insurance coverage applicable at the manager and fund levels or evaluate what, if any, claims are available under existing coverage (e.g., costs of cancelling business travel).

**Memorize Steps Taken**

Managers may recall that under similar circumstances (e.g., Hurricane Sandy), regulators have expressed interest after the fact in understanding how investment advisers fulfilled their obligations during periods of market disruption. Managers may therefore consider whether to memorialize the steps they take to prepare for and work through the effects of the COVID-19 outbreak.

**Be Proactive in Information Sharing, Valuations and Reporting**

- **Information Sharing/Selective Disclosure:** Managers are encouraged to be proactive with LP requests for information regarding the manner in which they are dealing with COVID-19’s impact on operations. Managers should be consistent with the types of information and responses that are provided to LPs, particularly when approaching a withdrawal/redemption notice deadline, to mitigate selective disclosure issues, and may want to consider creating standard responses or holding an investor call to disseminate information consistently to all LPs.

- **Valuations:** The changing valuations of investments may impact the calculation of management fees, performance allocation and withdrawal/redemption values. Managers may want to pay particular attention to ensuring compliance with any valuation provisions in their fund documents and their valuation policies, especially for less liquid investments and investments that are the subject of any side pocket or in-kind distribution determination.
Financial Statements: Many fund-level financial statements rely on the delivery of information regarding underlying investments (which will likely be delayed given the current situation). Managers may want to review whether the fund documents provide flexibility to go beyond the customary 90 or 120 day delivery timeframe, or if the offering documents contain disclosure relating to delayed reporting or force majeure risk. Potential delays beyond 120 days may impact custody rule compliance as well.

Consider Committed Class Structures; Subscription Line Facilities

Hedge fund managers who believe that market volatility presents investment opportunity may want to consider raising additional capital in committed classes or vehicles, that can be deployed opportunistically in distressed, volatility-based or other appropriate strategies when circumstances warrant. Managers may also consider implementing private equity-like credit facilities in these funds to provide the flexibility to act quickly in these situations.

The Coronavirus’ Impacts on Your Annual Meeting

As we enter the run-up to peak proxy season and with travel restrictions and quarantines increasing, companies face challenges on how to address the coronavirus (COVID-19) outbreak in the context of their annual shareholders meetings. In this memo, we answer important questions that we have been asked with respect to annual meeting contingency planning.

What are our options if our previously announced annual meeting cannot be held in its current location because of the COVID-19 outbreak?

If you find that you are unable to hold your annual meeting in its currently planned location, options include switching locations (either physically or by going virtual) or delaying the meeting. All of these options will implicate similar issues, including federal proxy disclosure and state law notice requirements and, for delays, possible record date requirements.

Switching physical locations or holding a virtual meeting may be the best option for many companies facing this issue because, notwithstanding the obvious disruption, this is the most “business as usual” option. Keeping the same meeting date but with a changed location allows the remainder of the corporate and board meeting calendar (which is often set months in advance) to stay on track.

If we want to switch meeting locations, what are the key considerations?

If you have already announced your annual meeting and would like to switch locations, you will need to:

- File an amendment to your proxy statement announcing the change in location. SEC staff has advised that, in addition to the amendment filing, companies should consider additional dissemination of this information to market participants (such as by press release, Form 8-K filings, exchange notices and/or website postings), but that there is no need to mail or otherwise distribute the proxy statement amendment to shareholders as would otherwise be required for material changes.¹

¹ The SEC has also provided conditional relief from the requirement to make available a proxy statement, annual report and other soliciting materials or to furnish an information statement and annual report, subject to certain conditions, including that (1) the relevant shareholder has a mailing address in an area where, as a result of the coronavirus, common carriers have suspended delivery service of the type or class customarily used by the company or other soliciting person and (2) the company or other soliciting person has made a good faith effort to furnish such materials to the shareholder, as required by the rules applicable to the particular method of delivering such materials to the shareholder. As of now, it is unclear what would
Consider shareholder notice requirements under state law. Delaware corporations are required to provide notice of the place (if any), date and time of any shareholder meeting to record holders (but not beneficial owners who hold their shares in “street name”) at least 10 days before the meeting. This notice is typically included in the proxy statement. Accordingly, even if federal securities laws do not require distribution of the proxy amendment, state law may require delivering a revised notice to record holders. For Delaware companies, we recommend that a new notice be mailed to record holders. States may also permit notice by email or electronic transmission; however, these options may not be viable for all of the shareholders at public companies due to the difficulties in obtaining email addresses and/or permissions for other means of electronic transmission.  

Provisions in the company’s charter and bylaws may also impose additional notice requirements so those should be reviewed as well. Boards often have the ability to unilaterally amend the company’s bylaws. Therefore, to the extent the bylaws impose significant restrictions on procedures necessary to address the COVID-19 outbreak, boards may decide to amend the bylaw provisions as needed, either permanently or on a “one-off” or “emergency” basis applicable only to this year’s annual meeting.  

If we want to switch to a virtual-only meeting, are there additional considerations?  

Yes. Importantly, not all states permit virtual-only meetings. Delaware law expressly permits a virtual-only meeting if you (1) adopt reasonable measures to verify shareholder or proxy holder identity, (2) provide such shareholders and proxy holders with a reasonable opportunity to participate in the meeting and to vote on a substantially real-time basis and (3) maintain voting records. In addition, only the board can decide to hold a virtual-only meeting. That decision cannot be delegated to officers even if they previously were authorized to determine the meeting venue. Other states, including New York, permit their corporations to add the option of remote participation to its meetings but do not allow the holding of shareholder meetings on a virtual-only basis. Companies should also check their charters and bylaws to confirm that no provisions would prohibit a virtual meeting, but again, the board may have the ability to amend the bylaws if necessary.  

As a further consideration, some institutional investors have objected to virtual-only meetings. For example, the NYC pension funds have a policy of voting against governance committee members at constitute a “good faith effort” to furnish such materials to the shareholder. For the SEC order, please click here. For our client memorandum on this development and other public disclosure considerations, please click here.  

2 For example, Delaware permits email notice if the company has email addresses for its record holders and the holder has not opted out, and notice by other electronic transmission if a holder has opted in.  

3 Note that material bylaw amendments are required to be disclosed on a Form 8-K filing with the SEC.  

4 Both NASDAQ and NYSE permit listed companies to have virtual-only meetings, with NASDAQ noting that shareholders should be given the opportunity to discuss company affairs with management at the meeting.
companies with virtual-only meetings. While ISS does not have a policy on virtual meetings, Glass Lewis will recommend against governance committee members holding virtual-only meetings without disclosure assuring shareholders that they will be afforded the same rights and opportunities to participate as they would at a physical meeting. While these policies have yet to be revised or otherwise addressed in light of the COVID-19 outbreak, we note that the voting impact of these policies has been mild, and, absent special facts, companies should not be overly concerned with them when making a decision to move to a virtual-only meeting in light of public health and shareholder benefits.

What if we want to delay our meeting instead? How should we do that?

If a properly appointed chair is able to be present at the previously disclosed location of the shareholder meeting, he or she may open the meeting and then have a vote to, or otherwise on his or her own determine to (as permitted by state law and the company’s governing documents), adjourn the meeting to a new date, time and/or location. Under Delaware law, when adjourning a meeting and reconvening, the reconvened meeting is considered a continuation of the initial meeting rather than an entirely new meeting so the record date, notice and quorum established at the initial meeting continue to apply to the reconvened meeting. The power to adjourn the meeting belongs to the shareholders under default Delaware law, but many companies’ bylaws also give the chair of the meeting the power to adjourn the meeting. In any event, at most annual meetings, company management will hold proxies for a sufficient number of shares to approve the adjournment if the chair is otherwise not permitted to adjourn the meeting.

In addition, under Delaware law, a meeting can be serially adjourned and re-adjourned several times, which provides companies with significant flexibility. If any particular adjournment exceeds 30-days, however, new notice must be sent to shareholders. Further, if the number of adjournments and the cumulative delay becomes extensive, the board may deem it appropriate to set a new record date so as to avoid having a shareholder vote with an arguably stale shareholder base. In the event a new record date is established, then you would need to amend your proxy statement and send notice to the new record holders. Other record date implications are discussed below.

Both NASDAQ and the NYSE have requirements for annual shareholder meetings, so early coordination with your company’s exchange listing agent in the event of a significant delay in the annual meeting timing is recommended.

What if we can’t get someone to open the meeting to adjourn or aren’t otherwise permitted to adjourn?

Another option to delay an annual meeting is through postponement before the time of the meeting. Postponement, unlike adjournment, constitutes the adoption of a new meeting date (as opposed to an extension of the original meeting). Unlike an adjournment, a new record date may be required. Under Delaware law, companies may rely on the previously disclosed record date as long as the postponed meeting
date falls within 60 days after the original record date (or any shorter period specified in a company’s charter or bylaws). Given tight proxy season timelines, however, some record dates may hit the maximum 60-day period if the meeting is postponed for any significant time. If the meeting date is more than 60 days after the record date, a new record date must be set.

Neither NASDAQ nor the NYSE sets requirements regarding how far in advance of a meeting a record date should be set, although the NYSE recommends a record date of at least 30 days before the meeting date. The NYSE also requires that a minimum of ten days’ notice be given to the exchange of any record date, but states that companies should contact their representative as soon as possible if they are unable to meet the ten-day notice requirement to discuss possible alternatives.

If we have not yet announced our annual meeting logistics, what preparations should we consider now?

Companies should reexamine whether a virtual-only meeting is viable for them, including examining their particular state law and governing documents and other requirements surrounding adjournment. With respect to additional disclosure obligations, the SEC staff has advised that companies do not need to provide any special disclosure that they might change their meeting logistics, unless there are special circumstances in play. Companies may nevertheless wish to add disclosure to the effect that they are monitoring the COVID-19 outbreak, and, if it becomes inadvisable or impossible to hold a physical meeting, will announce alternatives as soon as possible. Companies may also wish to direct their shareholders to their annual meeting websites (if any) for updates on logistics (keeping in mind securities laws considerations for linking to websites).

**Coronavirus: Employment Law Considerations and Practical Guidance for Employers**

On January 30, 2020, in response to the increasing global spread of the novel coronavirus (COVID-19), the World Health Organization declared a “Public Health Emergency of International Concern.” Within a day, the United States and Italy followed suit. Since then, numerous other countries, states, and local governments have also declared public health emergencies. On March 7, 2020, Governor Andrew M. Cuomo declared a state of emergency in New York, as the number of confirmed cases in the state continues to rise.

With each day that COVID-19 remains a growing threat to communities across the country, employers face unprecedented challenges and concerns. To provide guidance on how to plan, prepare, and respond to the coronavirus outbreak, the Centers for Disease Control and Prevention (the “CDC”) issued an interim guidance for businesses and employers (the “CDC Interim Guidance”). The New York City Health Department also issued guidance for NYC businesses and employers. Several companies, such as Amazon, Facebook, Google, Apple and Microsoft, have advised or encouraged their employees in particularly affected areas, such as Seattle, New York and New Jersey, to work remotely as the outbreak in those regions grows. A number of other companies have instituted strict international travel policies by, for example, suspending non-essential business travel and requiring any business travel outside the United States to be approved by a senior manager. Companies are also either facing or preparing for potential coronavirus-related claims. Among many proposals put forward by federal and state lawmakers to alleviate the economic impact of coronavirus on businesses and employees, President Trump announced on March 9, 2020 that he would ask Congress to cut payroll taxes and provide relief to hourly workers.

In this Client Memorandum, we provide a brief overview of the legal obligations relevant to employers during this public health crisis, followed by recommended strategies for employers to ensure business

---

continuity and a safe workplace. As the public health situation is rapidly changing, it is recommended that employers seek legal advice to stay abreast of additional developments. We will continue to monitor developments and keep clients apprised of pertinent information.

Employers’ Legal Considerations

Employers must balance multiple, at times competing, legal considerations when determining their response plans to the coronavirus outbreak. Relevant employment laws, discussed below, may include the Americans with Disabilities Act (“ADA”), the Occupational Safety and Health Act (“OSHA”), Title VII and state and local anti-discrimination laws, wage and hour laws, the Family and Medical Leave Act (“FMLA”), worker’s compensation laws, the privacy safeguards set forth in the Health Insurance Portability and Accountability Act (“HIPAA”), and whistleblower protection laws. Employers should keep in mind that the bedrock legal obligations that they owe their employees at all times remain in force during an infectious disease outbreak: the duty to provide a safe and healthy work environment, the duty not to discriminate based on disability, national origin, or other protected characteristics, the duty to comply with laws regarding compensation and absence from work, and the duty to protect the privacy of employees.

Laws Applicable to a Safe and Healthy Work Environment

- Under the ADA, an employer cannot make disability-related inquiries or require employees to undergo medical examinations unless the employee’s condition could pose a “direct threat” to the workforce, defined as a “significant risk of substantial harm to the health or safety of the individual or others that cannot be eliminated or reduced by reasonable accommodation.”

- According to pandemic guidance recently reissued by the Equal Employment Opportunity Commission (“EEOC”), whether an illness rises to the level of a “direct threat” is determined by the CDC and other public health authorities. Thus, employers should closely monitor the latest CDC and state or local public health assessments before requiring a medical examination or making coronavirus-related inquiries of employees.

---

3 A more detailed discussion of some of the most relevant federal, state, and local statutes applicable to employers in grappling with issues raised by the coronavirus is attached as an Appendix.

5 29 C.F.R. § 1630.2(f).

The Occupational Safety and Health Administration (the “OSH Administration”) has issued guidance setting forth specific requirements to prevent occupational exposure to the virus, depending on the type of employer.  

Because an employee’s expressed concern about work travel or other work-related activities might be interpreted as a protected whistleblower activity under OSHA, an employer whose business involves travel to affected areas should consider offering reasonable alternatives such as teleconferencing or videoconferencing of meetings and/or postponement of travel.

**Laws Applicable to Non-Discrimination**

In developing and implementing workplace policies relating to the coronavirus, employers should ensure that policies are facially neutral and enforced in a way that does not discriminate against anyone in a protected class.

Decisions about quarantine and evaluations of risk should be made on the basis of objective facts, such as a recent trip to a high-risk area, and not on unfounded fears, national origin, or race.

**Laws Applicable to Compensation and Leave Issues**

Under the Fair Labor Standards Act (the “FLSA”), whether an employer must continue to pay an employee while they are on leave depends on whether the employee is hourly or salaried.

Employers should keep in mind, however, that aside from the FLSA, they may be legally obligated to continue to pay employees who are on leave because of employment contracts or policies, collective bargaining agreements, or state or local wage laws.

While leave under the FMLA is unpaid, employers should be aware of any state or local laws that may require them to provide paid leave.

---

Laws Applicable to Privacy Considerations

- Pursuant to guidance issued recently by the Department of Health and Human Services, there are limited circumstances under which employers subject to HIPAA’s privacy obligations may disclose patient information during an outbreak of infectious disease.9

- Importantly, an employer should not publicly disclose the identity or any specific information about the treatment and/or test results of an employee without his or her written authorization.10

Recommended Strategies for Employers

There are several strategies that businesses may want to take now in order to plan for and mitigate the workplace and business disruptions caused by the spread of coronavirus. The recommendations for employers discussed below are based on currently available information, including recommendations from the CDC Interim Guidance and the New York City Health Department.11

Reassure Employees with Open Lines of Communication

Many employees will be concerned about the impact of coronavirus on their employment, family, and health. Employers should strive to ensure that employees have access to information and feel that their concerns are being heard and addressed. In this regard, employers should consider naming a coronavirus point person to whom employees can confidentially address concerns. It is recommended that this person be a member of the Human Resources Department or a similar department that has already developed relationships with employees. Employees should be told that the point person will sit down with them to discuss any concerns they have, and that all such discussions will be kept confidential. Having a point person in place may also increase the chances that employees will feel comfortable reporting personal travel or other potential incidents of exposure.

Employers should also consider sending regular coronavirus updates to employees, including educating employees on coronavirus symptoms and developments. Keeping employees informed about any steps the employer is taking to protect them will help ease concern. Employers should reassure employees that they

are staying abreast of all CDC and local guidelines regarding coronavirus, and share any such guidelines with employees.

Perform Routine Environmental Cleaning

The CDC has recommended that frequently touched surfaces be routinely disinfected to reduce the spread of germs. It is important to regularly disinfect door handles, counters, workstations, and other surfaces. Employers are encouraged to provide employees with disposable disinfectant wipes to clean their personal workstations and ensure access to such wipes in shared spaces such as break rooms and conference rooms.

Encourage and Facilitate Good Hygiene Practices

One of the best ways to prevent the spread of coronavirus is to engage in good hygiene. Employers should place posters throughout the workplace reminding employees to wash their hands with soap and water for at least 20 seconds, avoid touching their faces, and cover their mouth and nose with a tissue when they sneeze or cough. Employees should be provided hand sanitizers for work stations and common areas, and bathrooms should be kept well-stocked with soap. It is advised that employers provide tissues and no-touch trash receptacles, and employees should be reminded to dispose of tissues immediately after use.

Prepare for Employees to Work Remotely

To reduce strain on business, employers may consider preparing for employees to work remotely. The employer should evaluate which roles can feasibly be performed remotely, and ensure that work from home arrangements are in place. Employers should also consider data protection and confidentiality concerns when considering work from home setups. As a precautionary measure, employers may also consider encouraging employees who can easily work remotely to begin doing so even if they are not showing symptoms and have not been exposed to coronavirus. Reducing the number of employees onsite lowers the risk of a workforce-wide outbreak.

Encourage Sick and Exposed Employees to Stay Home

The legal implications of sick leave and quarantine are discussed above. Regardless of the approach an employer chooses to take with respect to sick leave and quarantine, it is important to emphasize that employees who are sick, or who may have been exposed to coronavirus, should stay home. Having a plan for remote work in place will make employees more comfortable about self-reporting and reduce the risk that coronavirus may spread among the workforce. Where it is not possible for an employee to perform their job duties from home, being generous with leave policies can encourage employees to report their illness or potential exposure to coronavirus to the employer.
**Review Upcoming Company Travel and Events**

Employers may want to consider cancelling or rescheduling upcoming non-essential meetings and events. Employees should also be encouraged to avoid congregating in groups. For example, employers may consider hosting meetings via teleconference or videoconference whenever possible.

Employers should review all upcoming business travel and consider whether they want to reduce, make optional, or prohibit non-essential work travel to affected regions. Where travel to an affected region is imperative, the employer should ensure that the traveling employees are educated on how to protect themselves and are provided as much support as possible. For example, the employer may consider upgrading the employee’s flight to limit exposure to other passengers. The employee may also be provided with, or reimbursed for, hand sanitizer and disinfecting wipes.

**Assess the Risk of Negligence Claims**

Businesses, particularly those that provide services or accommodation to the general public, may find themselves at greater risk of claims alleging that their negligence led to exposure and infection of clients, customers and/or visitors. Accordingly, businesses should identify what new exposures and risks may be present on their premises given the nature of the coronavirus and closely monitor and follow guidance from public health authorities and government officials to ensure that they are exercising reasonable diligence in warning about and protecting against exposure.

**What NOT to Do**

As discussed above, it is important that employers make determinations about risk of exposure based on reasonable and objective facts, not on actual or perceived race or national origin. An employer should be careful about taking measures such as mandatory temperature checks or medical screenings until and unless such measures are approved by the CDC. In addition, employers should also keep in mind their responsibilities concerning employees’ privacy rights. For example, employees should not be surveyed about personal travel or family connections. Employers may, however, encourage employees to report voluntarily any recent travel to infected areas or other incidents of potential exposure.

**Creating a Contingency Plan**

In addition to the strategies discussed above, companies should consider creating a pandemic contingency plan to reduce the impact of coronavirus on their business continuity. Some of the topics companies may wish to cover in such a contingency plan include:

- Creation of a response team, which would include members of the companies’ Human Resources, Safety, Operations, Finance, and Communications departments;
Setting up a process for tracking developments related to the coronavirus and for disseminating internal communications;

Creation of a reporting process across offices that will identify employees who are working, on leave, or working remotely (while still maintaining confidentiality and privacy);

Identification of critical employees without whom the companies cannot function, and identification and training of backup employees;

Evaluation of supply chains, determination of whether supplies should be stocked in advance, and identification of backup suppliers;

Identification of employee risk management concerns and assignment of certain issue buckets to specific departments. For example, Employee Benefits may be tasked with developing a plan for paid/unpaid quarantine and sick leave, Communications may be tasked with developing internal messaging, and Human Resources may be tasked with distributing company communications and education materials;

Development of a plan for external communications, including communications with clients and media;

Review of upcoming travel, development of a policy for business-related travel, and development of messaging on personal travel;

Review of delivery, visitor, and security protocols and determination as to whether they should be altered;

Implementation of cleaning and hygiene policies; and

Development of a pandemic budget plan and allocation of resources for employee protection.

The CDC has also issued a Business Pandemic Influenza Planning Checklist, which can be found here: https://www.cdc.gov/flu/pandemic-resources/pdf/businesschecklist.pdf.

The EEOC Pandemic Guidance can be found here: https://www.eeoc.gov/facts/pandemic_flu.html.

Appendix: Relevant Federal, State and Local Statutes

Americans with Disabilities Act

Under the ADA, which prohibits discrimination on the basis of disability in employment, as a general rule, an employer with 15 or more employees is prohibited from requiring a medical examination or making a disability-related inquiry. An exception to this general rule is that an employer may make disability-related inquiries or require a medical examination if the employee’s condition could pose a “direct threat” to the workforce. Under the current Equal Employment Opportunity Commission (the “EEOC”) regulations, a medical condition can be deemed a “direct threat” if it poses “a significant risk of substantial harm to the health or safety of the individual or others that cannot be eliminated or reduced by reasonable accommodation.” Additionally, the ADA requires that an employer make reasonable accommodations for individuals with disabilities absent a showing that the accommodation would impose an undue hardship on the operation of its business.

In its guidance concerning the coronavirus, the EEOC has stated that the ADA, “including the requirement for reasonable accommodation and rules about medical examinations and inquiries,” continues to apply in the midst of the coronavirus outbreak, and does not interfere with or prevent employers from following the CDC Interim Guidance. According to the EEOC’s pandemic guidance, which was published in response to the 2009 Swine Flu outbreak and recently reissued in light of the coronavirus outbreak (the “EEOC Pandemic Guidance”), whether an illness rises to the level of a “direct threat” depends on the severity of the illness which, in turn, will be determined by the assessment of the CDC or public health authorities. Thus, employers should closely monitor the latest CDC and state or local public health assessments for such determinations before requiring a medical examination or making coronavirus-related inquiries. In addition, as the employer’s duty to provide reasonable accommodations under the ADA continues even during a pandemic, employers should be prepared to accommodate individuals who have contracted coronavirus or are recovering from it, to the extent that infection with coronavirus falls within the definition

13 29 C.F.R. § 1630.2(r).
14 Id.
of a “qualified individual with a disability” and the accommodation does not pose an undue hardship on their business.\textsuperscript{17}

\textit{Occupational Safety and Health Act}

Under the OSHA's General Duty Clause, an employer must provide a workplace that is “free from recognized hazards that are causing or are likely to cause death or serious physical harm” and also must comply with the occupational safety and health standards proscribed by the statute.\textsuperscript{18} Section 11(c) of OSHA prohibits an employer from retaliating against workers for raising concerns about safety and health conditions.\textsuperscript{19} Most private sector employers are subject to OSHA's General Duty Clause and the anti-retaliation provision. Additionally, the statute requires employers with more than 10 employees to keep a record of serious work-related injuries and illnesses with some minor exceptions.\textsuperscript{20}

The OSH Administration has issued its own guidance regarding the coronavirus, cautioning that while “there is no specific OSHA standard covering” the coronavirus, several requirements may be relevant in preventing occupational exposure to the virus.\textsuperscript{21} According to the OSH Administration, employers with employees “with potential occupational exposure” to coronavirus—defined as including those that engage in healthcare, laboratory, airline, border protection, or international travel to high-risk areas\textsuperscript{22}—may need to provide personal protective equipment, including gloves and eye and face protection,\textsuperscript{23} and implement a comprehensive “respiratory protection program,”\textsuperscript{24} wherever necessary.\textsuperscript{25} Employers falling under this category should also promptly identify and isolate individuals suspected of having the coronavirus.\textsuperscript{26}

Further, in light of the OSH Administration’s guidance that “COVID-19 is a recordable illness when a worker

\end{itemize}
is infected on the job,” employers with more than 10 employees are required to record an employee’s exposure to the coronavirus, if any, on its OSHA log.\textsuperscript{27}

The OSHA standards and directives may apply in other ways as well. For example, because an employee’s expressed concern about work travel or other work-related activities might be interpreted as a protected activity under OSHA, an employer whose business involves travel to areas that are subject to travel restrictions or warnings should consider offering reasonable alternatives such as teleconferencing or videoconferencing of meetings and/or postponement of travel.

\textit{Title VII and Relevant State Anti-Discrimination Laws}

Title VII of the Civil Rights Act of 1964 prohibits employment discrimination on the basis of “race, color, religion, sex and national origin.”\textsuperscript{28} Title VII applies to employers who have 15 or more employees for each working day in each of 20 or more calendar weeks a year.\textsuperscript{29} In addition, there may be state and local anti-discrimination laws that provide broader protections than Title VII, such as the New York State and New York City Human Rights Laws which include protection over more protected classes.\textsuperscript{30} In developing and implementing workplace policies relating to the coronavirus, employers should ensure that such policies are facially neutral and enforced in a way that does not discriminate against anyone in a protected class. Decisions about quarantine and evaluations of risk should be made on the basis of objective facts, such as a recent trip to a high-risk area, and not on unfounded fears, national origin, or race. Any workplace policies relating to the coronavirus should also make clear that national origin discrimination and harassment will not be tolerated and that disparate treatment among employees in the workplace, such as singling out certain employees because of their national origin, is strictly prohibited.

\textit{Wage and Hour Laws}

Under the Fair Labor Standards Act (the “FLSA”), whether an employer must continue to pay an employee while they are on leave depends on whether the employee is hourly or salaried.\textsuperscript{31} Where an employee is

\textsuperscript{27} \textit{Id.}

\textsuperscript{29} \textit{Id.}

hourly, the employer has no obligation under the FLSA to continue paying the employee while he or she is on leave. Hourly employees need only be paid for the hours they actually work. However, where an employee is salaried, that employee must be paid their entire salary for the designated week where the employee performs at least some work during that week, even if work is performed remotely.32

Employers should keep in mind, however, that aside from the FLSA, they may be legally obligated to continue to pay employees who are on leave because of employment contracts or policies,33 collective bargaining agreements, or state or local wage laws. For example, on March 3, Governor Cuomo announced that he would amend his New York Paid Sick Leave budget proposal to cover individuals with coronavirus.34 If passed by the legislature, the budget proposal would require businesses with five to 99 employees to offer at least five days of job-protected paid sick leave each year, employers with over 100 employees would be required to offer at least seven days of paid sick leave, and employers with four or fewer employees must offer at least four days of unpaid sick leave.35 In New York City, the Earned Safe and Sick Time Act, which went into effect on April 1, 2014, already requires employers with five or more employees to provide each covered employee who works more than 80 hours per calendar year with up to 40 hours of paid sick leave per calendar year.36 Employers with four or fewer employees must provide eligible employees with up to 40 hours of unpaid leave.37 Under the New York City law, employees may use their sick time for, among other reasons, their own mental or physical illness, injury, or health condition, procurement of preventative care, caring for a family member, or when the employer’s business or the employee’s child’s school or day care is closed due to a public health emergency.38 Under this law, employers may only require medical documentation from employees who are absent for more than three days.39 At this time, it is unclear how the proposed New York Paid Sick Leave budget would interact with the New York City Earned Safe and Sick Time Act if passed. When making determinations about an employee’s pay during leave, employers should be sure to consult all relevant state and local laws.

32 *Id.*
33 Any time-off policies that the employer already has in place should be followed.
35 *Id.*
37 *Id.*
38 *Id.*
Family and Medical Leave Act

Under the FMLA, eligible employees are entitled to 12 weeks of unpaid leave during a one year period to care for their own “serious health condition” or that of a family member.\textsuperscript{40} A serious health condition is defined as “an illness, injury, impairment or physical or mental condition that involves inpatient care . . . or continuing treatment by a health care provider.”\textsuperscript{41} Although the flu or common cold does not ordinarily meet the threshold for a serious health condition according to the Department of Labor regulation,\textsuperscript{42} there is a possibility that the coronavirus may qualify as a serious health condition under the FMLA depending on the factual circumstances if it otherwise satisfies the definition of a “serious health condition.”\textsuperscript{43}

In the normal course, the FMLA allows an employer to require an employee coming back from leave to get a “fit-for-duty certification” from a health care provider before coming back to work subject to certain requirements.\textsuperscript{44} If the coronavirus were to qualify as a serious health condition under the FMLA, employers should consider forgoing this request in light of the CDC Interim Guidance that urges employers not to require a doctor’s note because healthcare provider offices and medical facilities may be extremely busy and not able to provide such documentation in a timely fashion.\textsuperscript{45}

Additionally, even though leave under the FMLA is unpaid, employers should be aware of any state or local laws that may require them to provide paid leave. For example, the New York Paid Family Leave Act (the “PFLA”), which became effective on January 1, 2018, requires employers to provide eligible employees job-protected paid leave for, among other reasons, the care of a family member with a serious health condition.\textsuperscript{46} The PFLA applies to most private employers with one or more employees.\textsuperscript{47} Employees become eligible for leave under the PFLA when they have worked 20 hours or more per week for 26 consecutive weeks, or after

\textsuperscript{40}29 U.S.C. §§ 2612(a)(1)(C); 2612(a)(1)(D).
\textsuperscript{41}29 C.F.R. § 825.113(a).
\textsuperscript{42}Id. at § 825.113(d) (“Ordinarily, unless complications arise, the common cold, the flu, ear aches, upset stomach, minor ulcers, headaches other than migraine, routine dental or orthodontia problems, periodontal disease, etc., are examples of conditions that do not meet the definition of a serious health condition and do not qualify for FMLA leave.”).
\textsuperscript{44}29 U.S.C. § 2614; 29 C.F.R. § 825.312.
\textsuperscript{46}See 12 NYCRR part 380. See also New York State, “How are Paid Family Leave (PFL) and the Federal Family and Medical Leave Act (FMLA) different?,” https://paidfamilyleave.ny.gov/paid-family-leave-and-other-benefits.
\textsuperscript{47}Id.
they have worked for 175 days if working less than 20 hours per week. While the PFLA does not cover an employee’s own serious health condition, eligible employees could receive up to ten weeks of paid leave to care for a family member with a serious health condition. Employers need to be aware of the application of the PFLA and any other state or local laws that affect their legal obligation to provide paid leave related to the coronavirus.

**Worker's Compensation Laws**

Worker’s compensation laws, which vary by state, generally extend insurance benefits for paid leave and medical expenses to employees for injuries “arising out of or in the course of employment.” Virtually all employers in New York must provide worker’s compensation coverage for their employees. Employers should be prepared to handle worker’s compensation claims related to coronavirus. In the event that an employee contracts coronavirus as a “direct result” of their job, the employee may be entitled to temporary disability benefits if coronavirus is determined to be an “occupational disease.” A disease is occupational where it arises from the conditions to which a specific type of worker is exposed, meaning that the disease must be particular to the employment. A worker who does not work in healthcare or a related field who contracts coronavirus in the workplace likely would not be eligible for worker’s compensation. However, employers who require employees to travel to high-risk areas should consider the risk that coronavirus may be considered an “occupational disease” should any of their employees contract it. Employers should review their worker’s compensation policies and insurance coverage and limits in preparation for potential worker’s compensation claims related to coronavirus. Employers are encouraged to carefully document all worker’s compensation determinations relating to coronavirus and maintain detailed records about possible incidents of exposure.

HIPAA and Privacy Considerations

The HIPAA Privacy Rule requires appropriate safeguards to protect the privacy of protected health information ("PHI"), and sets limits and conditions on the uses and disclosures that may be made of such information without patient authorization. An employer who is a covered entity or performs certain activities that involve the use or disclosure of PHI on behalf of a covered entity is subject to the privacy and security responsibilities under the HIPAA Privacy Rule. A covered entity (i.e., health care provider, health plan, and health care clearinghouse) or companies that handle PHI on behalf of a covered entity may not disclose, without a patient’s authorization, a patient’s PHI unless it is permitted or required by the HIPAA Privacy Rule.

Last month, the Office for Civil Rights (the “OCR”) at the Department of Health and Human Services issued a bulletin to provide guidance to HIPAA-covered entities and associated parties regarding the permissible ways in which patient information may be shared in an outbreak of infectious disease such as the coronavirus. The circumstances under which a patient’s PHI may be released without individual authorization include the following:

- Covered entities may disclose PHI about the patient as necessary to treat the patient or to treat a different patient.
- Covered entities may disclose requested PHI to a public health authority or to a foreign government agency that is collaborating with the public health authority (at the direction of a public health authority), and persons at risk of contracting or spreading a disease or condition if authorized by law.
- Covered entities may share PHI with a patient’s family, friends, relatives, or other persons identified by the patient as being involved in the patient’s care.
- Healthcare providers may share PHI with anyone in order to prevent or lessen a serious and imminent threat to the public health and safety.

58 Id.
Importantly, an employer should not disclose to the media or the public at large the identity or any specific information about the treatment and/or test results of an employee without their written authorization. Also, the OCR noted that covered entities are under an ongoing obligation to implement reasonable safeguards to protect PHI against intentional or unintentional impermissible uses and disclosures.

**Whistleblower Protections**

Several statutes protect employees who engage in whistleblower activities. The Whistleblower Protection Act (the “WPA”) protects federal employees and job applicants who lawfully disclose information they reasonably believe evidences “a substantial and specific danger to public health or safety,” among other things. The National Defense Authorization Act (the “NDAA”) makes it unlawful for a federal contractor, subcontractor, grantee, or sub-grantee to discriminate against an employee for making a protected whistleblower disclosure. Section § 740 of the New York Labor Law also prohibits employers from retaliating against a whistleblower who discloses or threatens to disclose an employer’s practices that present “a substantial and specific danger to the public health or safety.”

As discussed above, Section 11(c) of the OSHA also prohibits an employer from retaliating against workers for raising concerns about workplace safety and health conditions. The OSH Administration instructs employees to inform their employer about perceived unsafe or unhealthful working conditions as an employee may have a legal right to refuse to work under certain circumstances. The National Labor Relations Act (the “NLRA”) prohibits an employer from discharging or disciplining an employee for engaging in a protected “concerted activity,” which may encompass participating in a concerted refusal to work in unsafe conditions.

In light of the growing concern about the spread of the coronavirus, it is possible that an employee may raise concerns about potentially contracting the coronavirus at the workplace or refuse to engage in employment-related travel or other activities. In addition to taking reasonable measures to minimize the

61 5 U.S.C. § 2302(b)(8).
63 N.Y. Lab. Law § 740(2).
64 29 U.S.C. § 660(c).
risks at the worksite, an employer should not retaliate against employees who, in good faith and reasonable belief, voice their concerns relating to the coronavirus.

**Warn Act**

The federal Worker Adjustment and Retraining Notification Act (the “WARN Act”) requires employers with 100 or more full-time employees to provide notice in certain situations if they are forced to close a plant or institute mass layoffs. The WARN Act specifies the information that must be included in each notice, but does provide for an exception to some of the notice requirements when layoffs are a result of unforeseen business circumstances. It remains to be seen whether the notice exemption would apply if the contemplated layoffs are a result of the effects of the coronavirus. In addition, employers may also be subject to state “mini-WARN” laws with different employee thresholds and notice obligations. It is recommended that employers seek the advice of counsel if they anticipate suspension of business or layoffs due to the coronavirus as soon as practicable.

68 20 C.F.R. § 639.9(b).
COVID-19: Fund-Related Considerations for Private Equity Managers

The cascading impacts of the coronavirus outbreak (COVID-19) on markets and businesses are creating a variety of challenges and opportunities for private equity funds. General partners (“GPs”) may want to consider a variety of proactive steps, including reviewing investment objectives; altering fund documents; being more proactive in information sharing, valuations and reporting; reviewing borrowing limitations and derivative contracts; and other protective measures.

Broaden the Investment Mandate

The recent market turmoil arising from COVID-19 will result in some GPs considering distressed and other non-traditional investment opportunities, including open market purchases of public equities. For existing private equity funds, the investment objectives set forth in the fund documents should be reviewed to explore whether or not they provide the flexibility to make these types of investments. For new private equity fund offerings, GPs may want to consider broadening the fund’s strategy beyond traditional buyouts to include distressed investing for control, flexibility to invest in the debt of portfolio companies and possibly open market purchases of public equities. GPs will also need to understand the compliance and regulatory considerations (including filing requirements) pertaining to any such investments.

Alter the Fund Documents

• **Offering Period**: For ongoing fund offerings, GPs should expect delays in the offering process and may want to consider extending the offering periods of private equity funds beyond the customary 12 months. GPs may also wish to build in the flexibility for the consent of the advisory board or the GP to extend the offering period.

• **Capital Commitment Rollover**: GPs may want to consider asking LPs in existing private equity funds that are in liquidation or wind down to “reallocate” unfunded commitments into new distressed or other non-traditional strategies as a more efficient way of LPs’ underwriting “new” commitments.

• **Commitment Period**: For ongoing fund offerings, GPs may want to consider building in commitment period extension mechanics (e.g., the ability to extend by one or two years with the consent of the advisory board). For existing private equity funds that have the ability to extend commitment periods, GPs may want to consider seeking an extension now to get ahead of opportunities and ensure flexibility to draw on unfunded commitments.
Term: For existing private equity funds nearing the end of their terms, GPs may want to consider seeking a term extension to provide additional time to weather a potential long-term financial downturn.

Follow-On Investments: The expected need to provide additional capital to portfolio companies may put pressure on the follow-on provisions in fund documents (which typically cap the amount of follow-on investments at 15-20% of commitments after the end of the commitment period). GPs may want to consider whether, and to what extent, a follow-on investment is subject to these limitations if the follow-on investment is being funded without calling additional capital contributions (or through the use of leverage). If there is no follow-on investment capacity, or if follow-on capacity may be constrained down the road, GPs may want to consider if other means of credit support are available, such as portfolio company guarantees.

Recycling: For ongoing private equity fund offerings, GPs may want to consider creating broader flexibility to recycle proceeds without regard to a specific timeframe (typically 12-24 months) or other than solely during the commitment period. GPs may want to consider the ability to treat special purpose vehicles as portfolio companies for purposes of enhancing recycling flexibility.

LP Meetings: GPs may want to consider providing for alternative means of holding LP meetings, including by way of webcasts or other electronic means.

Warehousing: GPs may want to consider the inclusion of warehousing provisions in fund documents to allow it or its affiliates to warehouse investments while private equity funds are in the offering period or are unable to obtain financing for an acquisition. Similarly, GPs may want to consider preserving flexibility to lend to funds or portfolio companies if traditional financing sources are not available.

Be Proactive in Information Sharing, Valuations and Reporting

Information Sharing/Selective Disclosure: GPs are encouraged to be proactive as LP requests for information regarding the manner in which funds and portfolio companies are dealing with issues arising out of COVID-19’s impact on operations. GPs should be consistent with the types of information and responses that are provided to LPs to mitigate selective disclosure issues. If LPs are inquiring about impacts on product demand, supply chain, working capital, valuation or deal flow, GPs may want to consider creating standard responses (consistent with how responses would be presented in DDQs) or holding an investor call to disseminate the information consistently to all LPs. GPs may want to seek feedback from portfolio companies in order to respond effectively and to ensure a consistent message is delivered to LPs, counterparties and customers.
Valuations: The changing valuations of portfolio companies may impact the calculation of management fees, distribution waterfalls and clawbacks. GPs may want to give particular attention to the valuation provisions in their fund documents to ensure compliance therewith. GPs are also encouraged to consider the potential impact on any subsequent closings in process.

Financial Statements: Many fund-level financial statements rely on the delivery of information from portfolio companies (which will likely be delayed given the current situation). GPs may want to review whether the fund documents have flexibility to go beyond the customary 90 or 120 day delivery timeframe or if the offering documents have disclosure relating to delayed reporting or force majeure risk. Potential delays beyond 120 days may have an impact on custody rule compliance as well.

A Time for Borrowings

Increased Use of Leverage: Falling valuations and distressed or other non-traditional opportunities may drive increased use of leverage by private equity funds through the use of existing subscription line facilities (if capacity is available), total return swaps, margin loans or other alternative forms of financing. GPs may want to pay careful attention to borrowing limitations in fund documents and any requirement to reserve unfunded capital commitments for purposes of satisfying borrowings and other contingent liabilities.

ISDAs/Derivative Contracts. GPs are encouraged to review their funds’/portfolio companies’ derivative contracts to get ahead of any NAV triggers, margin calls or other contingent obligations that may arise in connection with outstanding derivatives transactions.

Consider Protective Measures

Insurance: GPs may want to consider reviewing the expansion of insurance coverage applicable at the manager, fund and portfolio company level or consider what, if any, claims are available under existing coverage (e.g., costs of cancelling business travel for investor or portfolio company board meetings).

Secondaries: The market dislocation could lead to unique opportunities for GP-led secondaries, particularly in respect of individual portfolio companies that now need more time than otherwise expected to maximize value and distribute proceeds (instead, they now need an influx of new capital). In addition, investors may be looking for liquidity with respect to illiquid LP interests. Accordingly, GPs should be prepared for an uptick in secondary activity, including as a result of investors’ defaults.

State AGs Respond to COVID-19-Related “Price Gouging” and DOJ Antitrust Enforcement to Focus on Public Health Products

The outbreak and continued spread of a new strain of coronavirus, COVID-19, has led to surging demand for, and in some cases shortages in the supply of, a wide variety of consumer products, including hand sanitizer, face masks and toilet paper. This in turn has led to instances of prices for certain such products being increased sharply. Responding to this dynamic, attorneys general of states including California, New York and Washington have announced their intent to take action against unfair “price gouging” under their respective state laws.

While such practices are generally outside the scope of federal antitrust laws, the U.S. Department of Justice has also cautioned businesses involved in manufacturing, distribution or sale of public health products that it will be stepping up antitrust enforcement efforts in this sector (including criminal prosecutions for price fixing, bid rigging and market allocation). These efforts will include the department’s recently announced Procurement Collusion Strike Force, which targets collusive practices in connection with federal, state and local government procurement. Attorney General William P. Barr stated: “The Department of Justice stands ready to make sure that bad actors do not take advantage of emergency response efforts, healthcare providers, or the American people during this crucial time.”

Businesses should anticipate increased enforcement of state consumer protection and unfair competition laws, as well as federal and state antitrust laws, with respect to the sale of public health-related products and other consumer goods. This is an opportune time for manufacturers, distributors and sellers of such products—and especially those involved in government contracting—to consider evaluating their antitrust and other internal compliance programs to ensure that such programs are effective, up-to-date and being communicated appropriately within their organizations.

Responses of State Attorneys General to Alleged Price Gouging

At least three state attorneys general have announced their intent to use their enforcement powers to combat alleged price gouging in connection with coronavirus/COVID-19.

On March 4, 2020, California Governor Gavin Newsom issued a “Proclamation of a State of Emergency” regarding COVID-19. The same day, California Attorney General Xavier Becerra issued a “price gouging

---

alert” to “remind[] all Californians that, under Penal Code Section 396, price gouging is illegal in all California communities during the declared state of emergency.”

The state attorneys general of New York and Washington have issued similar alerts. Washington Attorney General Bob Ferguson, also on March 4, announced that his “office is investigating price gouging in the wake of the COVID-19 public health emergency,” and encouraged consumers who “see price gouging” to “file a complaint with [his] office.” The following day, New York Attorney General Letitia James issued a press release describing several “potential consumer scams” related to COVID-19. Among other things, the press release encouraged consumers to “[r]eport retailers that appear to take unfair advantage of consumers by selling goods or services that are vital to the health, safety, or welfare of consumers for an unconscionably excessive price.”

California and New York each have laws that apply specifically to such situations. California Penal Code § 396(b) prohibits increasing prices for various goods—including food, “emergency supplies” and medical supplies—by more than 10 percent for 30 days following the Governor’s proclamation of a state of emergency. New York General Business Law § 396-r(2) provides that during any “abnormal disruption of the market for consumer goods and services vital and necessary for the health, safety and welfare of consumers, no party within the chain of distribution of such goods or services may sell or offer them for an “unconscionably excessive price.” The New York statute has been applied in the past by the attorney general to combat alleged price gouging following severe storms. For example, following Hurricane Katrina, the New York Attorney General brought a successful action against a gas station that had increased its normal mark-up of $0.83 per gallon, to mark-ups ranging from $0.97 to $1.43 per gallon.

5 A seller may defend against a claim of price gouging under § 396(b) if it “can prove that the increase in price was directly attributable to additional costs imposed on it by” its supplier or increased labor or materials costs, and “the price is no more than 10 percent greater than the total of the cost to the seller plus the markup customarily applied by the seller for that good or service in the usual course of business immediately prior to the onset of the state of emergency.”
Businesses should anticipate that the three states identified will increase enforcement of such laws with respect to the sale of health-related products and other consumer goods in the coming weeks and months. Other states are likely to follow suit.

**DOJ Antitrust Division to Focus on Enforcement in Public Health Products Sector**

Concerns over the prospect of price gouging typically fall outside the realm of federal antitrust enforcement. On March 9, 2020, however, the Antitrust Division of DOJ announced that it would use its enforcement powers under federal antitrust laws to “hold accountable anyone who violates the antitrust laws of the United States in connection with the manufacturing, distribution, or sale of public health products such as face masks, respirators, and diagnostics.” In particular, DOJ noted that “[i]ndividuals or companies that fix prices or rig bids for personal health protection equipment such as sterile gloves and face masks could face criminal prosecution,” and warned that “[c]ompetitors who agree to allocate among themselves consumers of public health products could also be prosecuted.”

In addition, DOJ stated that its “recently announced Procurement Collusion Strike Force will also be on high alert for collusive practices in the sale of such products to federal, state, and local agencies.” The Strike Force, which we discussed in a prior client memorandum, focuses on “deterring, detecting, investigating and prosecuting” collusion among companies and individuals involved in government procurement at all levels.

These announcements serve as a reminder that (like other businesses) manufacturers, distributors and sellers of medical products—and especially those involved in government contracting—should consider evaluating and updating their antitrust and other compliance programs to ensure ongoing effectiveness.

**What Does New York’s Declaration of a State of Emergency Mean for Business?**

On Saturday, March 7, 2020, Governor Andrew M. Cuomo declared a state of emergency in New York as the number of confirmed coronavirus (COVID-19) cases in the state continued to rise. In doing so, New York joined several other states that previously declared states of emergency, including California, Florida, Maryland, and Washington. Executive Order No. 202 – “Declaring a Disaster Emergency in the State of New York”¹ – grants the State additional powers and suspends various legal requirements to facilitate the State’s ability to obtain additional resources and respond more quickly to the COVID-19 outbreak. Executive Order No. 202 follows on the heels of recently passed legislation that expands the state's existing emergency powers. Businesses should be mindful of how the implementation of the Executive Order, and expected future government action, may affect their operations and obligations.

**State of Emergency Declarations in New York**

New York law grants the governor broad powers to declare a state of emergency to respond to a disaster to which local governments are unable adequately to respond, including epidemics or other events that threaten widespread damage, injury, or loss of life. A state of emergency declaration permits the governor to direct local officials and state agencies, and to suspend state and local law or regulation to facilitate disaster response efforts.²

On March 3, 2020, Governor Cuomo signed into law an amendment to New York’s statute governing the state’s emergency powers.³ In addition to appropriating $40 million for use in fighting the spread of COVID-19, the law also expanded the state’s disaster response authority by authorizing the governor to issue any directive during a state of emergency that is reasonably necessary to aid the disaster response.

**Executive Order No. 202**

Executive Order No. 202 utilizes New York’s emergency powers to facilitate the State’s ability to more quickly and effectively contain the spread of COVID-19. The Executive Order grants the State the following authority:

---

² N.Y. Exec. Law §§ 20, 28, 29, 29(a).

³ 2020 Sess. Law News of N.Y. Ch. 23 (S. 7919).
The power to procure, without following traditional bureaucratic prerequisites, material and supplies to assist the state in responding to the spread of COVID-19, including cleaning supplies, hand sanitizers, testing equipment, and other resources;

The power to hire, without following traditional bureaucratic prerequisites, additional personnel to deal with the fallout from the spread of COVID-19;

The power to expand the personnel and locations permitted to conduct COVID-19 testing;

The power to obtain additional facilities or vehicles, such as lab space or patient transport, without complying with traditional procurement processes;

The power to permit medical providers to transfer patients to designated quarantine locations;

The power to modify eligibility criteria and premiums for certain state insurance programs; and

The power to suspend quorum and in-person public-meeting requirements to permit public health officials to take such actions as may be necessary to respond to the COVID-19 outbreak.

Executive Order No. 202 will be effective for six months unless terminated by the governor, although it remains subject to further extensions. The specific laws and regulations modified by the Order will remain suspended until April 6, 2020, unless extended by the governor for additional 30-day periods.

The declaration of a state of emergency also triggers application of New York’s price gouging law. The Attorney General is empowered during states of emergency to seek civil penalties against, and restitution from, businesses that sell or offer to sell consumer goods or services at unconscionably excessive prices.

**The Implications of the Emergency Declaration for Businesses Operating in New York**

The human and financial costs associated with COVID-19 have been significant and will continue to escalate as governments and businesses grapple with how to slow the spread of the virus. Government and regulatory action may have substantial implications for how businesses conduct their operations, apply measures to protect employees, and interact with state regulators. Executive Order No. 202 does not, by its terms, impose affirmative obligations on private businesses or citizens, at this time. Companies supplying goods and services in the state should be mindful of increased scrutiny by state regulators to pricing behavior. State contractors, medical companies, and insurance providers in particular should evaluate

---

4 N.Y. Exec. Law § 28(3).
5 N.Y. Exec. Law § 29-a(2)(a).
whether and to what extent the suspension of laws and regulations subject to the Executive Order may affect their businesses.

Companies also should closely monitor further developments as state authorities implement disaster response efforts. Past emergency declarations often have been followed by additional executive orders in the ensuing weeks and months that clarify or expand upon the state’s emergency powers as disaster recovery efforts unfold. The recent expansion of emergency powers to authorize directives necessary to respond to disasters such as the COVID-19 outbreak affords the state great latitude to issue any directive believed to be reasonably necessary to aid the disaster response.

We will closely monitor the legal and business implications associated with the global – and local – fallout from the COVID-19 outbreak, and will continue to report developments. We will be meeting with the Governor on Wednesday, as part of a select group of New York’s business leaders, to discuss how the state government and business community should best deal with the COVID-19 crisis.

Is the Coronavirus a Material Adverse Effect?

“Material adverse effect” and “material adverse change” terms (“MAEs”) serve a number of functions in M&A agreements. Most importantly, the MAE definition sets the parameters for which a buyer is permitted to terminate the transaction if there is a material adverse event affecting the target company or business. Many clients are now asking whether the recent coronavirus (COVID-19) outbreak and its effects constitute a material adverse event that could trigger an MAE termination right. The short answer is that, as of now, the effects of the COVID-19 outbreak would not likely constitute a material adverse event under the typical MAE provision due to the currently unclear duration of its impact and its broader global and cross-industry reach. However, stay tuned, as this may change depending on how long the outbreak lasts, whether it begins to affect particular companies and industries disproportionately and whether MAE provisions become more tailored to address this issue. Certainly, if negotiations are ongoing for a prospective transaction, careful consideration should be given to crafting these provisions in light of the outbreak.

Basic MAE Principles

The typical MAE is defined as any development, event, condition, state of facts, etc., that have had, or would reasonably be expected to have, a material adverse effect on the business, assets, financial condition or results of operations of the subject party, but excludes various categories of broader market or industry risk. Common exclusions from the MAE definition include effects related to (i) general economic, business, financial, credit or other market conditions and (ii) any epidemic or other natural disaster or act of God, but often only to the extent such effects do not disproportionately adversely affect the subject party versus others in the industry.

Notwithstanding that these provisions are often heavily negotiated, there is typically no express definition of the specific events or dollar amount of value loss that would constitute an MAE. As a result, it is left to the courts to determine whether there has been an MAE, and the courts do not apply a bright-line test. Under Delaware and New York law (in the seminal cases of Frontier Oil Corp. v. Holly Corp. and In re IBP, Inc. Shareholders Litigation, respectively), an MAE is deemed to have occurred if a facts-based inquiry shows that the effects “substantially threaten the overall earnings potential of the [party] in a durationally-significant manner.” As recently confirmed in Fresenius v. Akorn, the only Delaware case to have found an MAE in the M&A context (a case in which Paul, Weiss represented the buyer Fresenius), these effects must

---

1 For our client alert on force majeure clauses and COVID-19, please click [here](http://example.com).
be material when viewed from the longer-term perspective—a “short-term hiccup in earnings” will not suffice.

Impact of the COVID-19 Outbreak on MAE Provisions in M&A Agreements

As the COVID-19 outbreak continues to develop and affect markets and industries, buyers may well argue that its effects on a particular company constitute an MAE that justifies terminating a deal. As discussed above, however, an MAE must be durationally significant, and it is likely too soon to tell whether the COVID-19 outbreak or any of its effects will constitute a durationally significant event. At this time, it is difficult to predict the lasting impact of the COVID-19 outbreak for any particular company or industry, or across companies and industries, as the effects may vary. In short, there is no standard analysis as to whether the effects of the COVID-19 outbreak on a particular business would justify a party’s refusal to close on a deal under an MAE analysis. By its nature, this will be a fact-specific inquiry. Further, even if the COVID-19 outbreak is a materially adverse event for a particular company, the effects of the outbreak may qualify as an exclusion under the epidemic/force majeure and/or market exceptions to the MAE definition. The question then will be whether the COVID-19 outbreak has had a disproportionate impact on the particular business, which again, is a fact-specific determination.

All of this, of course, is dependent on the particular language of the relevant MAE provision. As the COVID-19 outbreak continues, it is likely that sellers will negotiate for more specific references to pandemics and epidemics in the exceptions to the definition of an MAE, just as terrorism exceptions became more commonplace following the events of September 11, 2001.

For private company transactions, it is worth noting that going forward, transactional insurance, such as rep and warranty insurance, is unlikely to be available for the effects of the COVID-19 outbreak because these policies usually exclude “known issues” from coverage.

Impact of the COVID-19 Outbreak on Debt Financing

Typically, debt financing provisions use the same MAE definition as the related acquisition agreement, and, therefore, the same issues discussed above should apply. An additional concern, however, is that the lender (in addition to the buyer and seller) will be making a determination as to whether an MAE has occurred, including whether the COVID-19 outbreak qualifies as an exclusion to the definition. The analysis may be slightly different for lenders than it is for the parties to an M&A agreement. While courts have emphasized the importance of the long-term prospects of the subject party in M&A MAEs, they may take a different view or consider alternative facts in the financing context where a borrower’s short-term ability to make debt payments may be relevant. For example, in *The Mrs. Fields Brand, Inc. v. Interbake Foods LLC*, the court stated that, in the context of an MAE provision in a five-year license agreement, “the period of time that would be ‘commercially reasonable’ in determining whether a consequential decline in earnings has
had a material adverse effect on the license presumably would be shorter than the period of time relevant to the acquisition of [a] business.”

Practically speaking, this means that the parties to the M&A transaction could be prepared to close, but the lender could nevertheless refuse to fund if it concludes that an MAE has occurred. In such a case, the buyer may very well argue that an MAE has occurred and that it is not required to close the M&A transaction. However, under these circumstances, the buyer cannot rely solely on the fact that the lender’s analysis supports the occurrence of an MAE. The buyer will still be required to demonstrate (potentially in litigation) that an MAE has occurred, and, if unsuccessful, the buyer will likely be required to find alternative, more expensive financing or (more typically in private equity transactions) pay the seller a reverse break fee.

We will closely monitor the legal and business implications associated with the global fallout from the COVID-19 outbreak, and will continue to report developments.

Mitigating Cybersecurity Risks Related to the Coronavirus

The outbreak and continued spread of a new strain of coronavirus, COVID-19, present unique challenges for companies. To protect employees and limit the spread of the virus, many companies have been implementing contingency plans that allow or, in some cases, mandate that certain employees work remotely. These efforts may be prudent and advisable, but can inadvertently heighten the risk of data breaches or other cyber incidents, which in turn can lead to substantial financial loss, reputational harm, and legal exposure. Although those risks cannot be eliminated, businesses should be mindful of the enhanced risks and consider reasonable, practical steps to mitigate them.

Heightened Risks

A spike in the number of employees working remotely can create increased network vulnerability, greater risk of inadvertent data loss, and greater financial vulnerability. These risks are exacerbated by cybercriminals seeking to exploit the unique features of the coronavirus situation to engage in more effective phishing and other methods to gain unauthorized access to network systems.

Network Vulnerability Resulting from Increased Use of Remote Access

Although methods of remote access vary across institutions, allowing employees to access the network remotely can create greater vulnerabilities, particularly for those institutions that quickly put in place or expand the use of remote access as in response to a situation like the coronavirus outbreak. When employees use unsecured home networks, for example, or, even worse, public networks such as those at coffee shops, communications may be vulnerable to eavesdropping and man-in-the-middle (MITM) attacks. In addition, some remote access endpoints only require a simple ID and password to log on, which may be susceptible to hacking given the frequent use of weak passwords. And, the use of BYOD devices raises additional concerns. If a device is used on external networks, infected with malware, and then connected to the company’s network, the malware may spread across the network. Moreover, BYOD devices generally are more vulnerable to malware since they often are protected by weaker passwords and consumer-ready antivirus products that are not designed to fend off more sophisticated hacking techniques.

Companies that regularly use these remote access methods generally have policies and protections in place and have trained employees who use these technologies. But companies that are quickly implementing remote access in response to the coronavirus outbreak, or expanding access to greater numbers of employees, may not have had time to put in place such measures. In addition, for companies that have historically limited the use of remote access, the sudden increase in remote access activity on their networks may make it more difficult to monitor, detect, and prevent unauthorized activity.
Risk of Data Loss Resulting From Removing Data from the Office

An increase in employees working remotely also means that employees are more likely to take electronic or other data outside the physical, secure boundaries of the office space, or turn to shortcuts that may be more convenient but less secure, such as forwarding emails or documents to their personal email accounts. All of these can increase the risk of data loss, a particular concern for companies and employees with access to personally identifiable information or other sensitive customer or business information. Laptops or other devices are more likely to be lost or stolen when removed from the office, and, depending on the level of encryption (if any), the data on a stolen or lost device may be accessible to unauthorized users who come into possession of the device. And, employees may use thumb drives or other portable media to remove files from the office to make them accessible at home. Use of such portable media enhances the risk of accidental loss or theft. Moreover, if an employee is using portable media on a personal device at home, and then plugs that portable media into a work computer when he or she returns to the office, there is a risk of infecting the broader network.

Risk of Financial Loss Due to Feasibility of Controls

Employees who are not in the office are also not available to meet in person, and may not be able to answer their office telephones. As a result, companies that rely on personal contact, or telephone confirmations, to execute banking or securities transactions may be especially vulnerable to bad actors impersonating employees, or to employees circumventing security precautions because they are inconvenient or impossible to follow. For example, last year a financial institution was fined for failing to follow its own procedures that required the institution to call a customer to verify a wire transfer that turned out to be fraudulent. When employees are working at home, it may become difficult or impossible to reliably reach them by phone, or to meet with them in person to verify or confirm transactions or instructions.

Increased Scams and Phishing Attempts Making Use of the Coronavirus Outbreak

Unsurprisingly, cybercriminals are taking advantage of the public anxiety and disruption to ordinary routines resulting from the coronavirus. Since January, bad actors reportedly have been sending an increasing number of phishing emails mentioning the coronavirus, posing as business partners or public institutions to lure recipients to open the messages, thereby unleashing malware. Some emails are made to look like a company’s purchase order for face masks, to trick employees into wiring payments to fraudulent accounts. Others purport to provide updated health information on behalf of a public health organization, or promise information about a company’s remote-work plan in exchange for personal details. In the midst of increasing disruption to normal work routines, cybercriminals can use the anxiety and urgency around the coronavirus to execute more effective spoofing and spear phishing attacks that trick users into taking actions that permit the bad actors to gain access to a company’s systems.
Practical Steps to Limit Risk

There is, of course, no way to eliminate the risk of a data breach or other cyber incident. And, it can be especially challenging to limit those risks in the face of a rapidly changing and unpredictable public health situation such as this, where institutions must be able to react quickly. But because of the potential consequences of a cyber incident, companies must be especially vigilant and mindful of the increased risks. We set forth below some practical steps to consider in mitigating those risks.

1. Management (and, where appropriate, the board) should consider consulting with IT security professionals regarding cybersecurity risks presented by increased remote work and/or changes to standard protocols, and explore potential enhancements to existing security measures.

2. Antivirus and monitoring tools should be updated regularly, and companies may wish to consider endpoint detection and response software to remotely limit the impact of a compromised device.

3. Employees working remotely should be advised and/or reminded of relevant policies and restrictions.

4. If possible, employees should be asked to test the relevant remote access software and applications in advance to ensure that they are familiar with the process and allow time to address any problems or concerns.

5. All employees should be reminded of best practices, warned about the increased risk of scams and phishing attempts, and encouraged to be vigilant, including by avoiding links or attachments from unknown or suspicious sources. Some companies may even want to consider a simulated spear-phishing campaign to test its employees’ awareness.

6. Companies that rely on policies and protocols that require in-person or telephonic confirmation of financial transactions should consider the challenges posed by the current health situation and whether enhanced protocols may be warranted to mitigate the risk posed by bad actors.

7. Companies should review, evaluate, and update, if necessary, their incident response and business continuity plans. Among other things, it may be important to ensure that if large segments of the workforce are working remotely, the necessary personnel, including IT and IT security, senior management, external advisors, and other relevant professionals, are accessible and can be contacted quickly even if not physically present in the office. This personnel includes not only those with the technical expertise to assist with a cyber incident, but also members of management with the appropriate decision-making authority.
8. Public filers should consider disclosure requirements concerning cybersecurity risks, and in the event of a cyber incident, all companies should evaluate potential disclosure obligations, including to customers, government agencies, and, if applicable, investors.

Some of the steps companies are taking to mitigate the health risks associated with COVID-19, while prudent and responsible, may also increase the risks of a cyberattack, and companies should therefore also be considering reasonable and practical steps to limit those risks as well.

Mitigating Securities Litigation Risks Related to the Coronavirus

Fears over the spread of the coronavirus (COVID-19) have significantly impacted the global economy and businesses’ ability to manufacture, distribute and sell their products. These same fears have also caused the most severe US stock market decline since the beginning of the 2008 recession. As recent trends demonstrate, the plaintiffs’ securities bar is likely to attempt to convert these (and potential future) drops into event-driven stock-drop litigation. This alert addresses the risks associated with stock-drop litigation related to COVID-19, and the steps companies can take to mitigate these risks, including updating their risk disclosures and financial guidance prior to the filing of their next periodic report.

Yesterday, the SEC expressly reminded “all companies to provide investors with insight regarding their assessment of, and plans for addressing, material risks to their business and operations resulting from [COVID-19] to the fullest extent practicable to keep investors and markets informed of material developments.”¹ SEC Chairman Jay Clayton explained that the manner in which companies plan and respond to the virus can be “material” to an investment decision, and urged companies “to work with their audit committees and auditors to ensure that their financial reporting, auditing and review processes are as robust as practicable.”² The SEC also emphasized that COVID-19 may affect companies beyond those that have significant operations in China or other jurisdictions affected by the virus. It may also affect companies that “depend on companies that do have operations in those jurisdictions, including, for example, as suppliers, distributors and/or customers.”³ (See also SEC Reporting Companies: Considering the Impact of the Coronavirus on Public Disclosure and Other Obligations)⁴

Potential Risks of Event-Driven Stock-Drop Litigation

The last few years have seen a dramatic increase in “event-driven” litigation. These cases follow a familiar pattern: plaintiffs’ securities law firms identify public company stock drops resulting from major negative events and then file claims that are largely premised on the theory that the company did not adequately warn of the risk that has now materialized. Event-driven litigation can follow company-specific events such

2. Id.
4. An SEC order issued yesterday provides publicly traded companies with an additional 45 days to file certain disclosure reports that would otherwise have been due between March 1 and April 30, 2020, subject to certain conditions. See https://www.sec.gov/rules/other/2020/34-88348.pdf. The SEC has also encouraged companies to contact the SEC for guidance on reporting.
as data breaches or product failures, as well as larger cultural or societal developments such as the #Metoo movement or climate change. We expect a wave of stock-drop litigation and SEC enforcement actions relating to the business and market impacts of COVID-19.

The plaintiffs’ securities bar may attempt to exploit stock drops related to COVID-19 by framing them as the materialization of a known but undisclosed risk that the company was under a duty to warn about. Here, even if plaintiffs cannot argue that a company or executive failed to predict the impact of COVID-19 specifically, they may argue that a company’s past disclosures failed to adequately warn of the risks from an epidemic like COVID-19. This may be a particular concern for companies that experienced supply chain interruptions or customer losses from past global health crises emanating from the same region, like SARS. Additionally, the risk of incurring liability for a securities fraud lawsuit in the future may grow as news of the virus and our understanding of its impact continues to accumulate, particularly for companies that fail to address the risk of COVID-19 in a timely manner.

In addition to securities fraud liability, there is also a risk that companies will face stock-drop suits arising under Sections 11 and 12(a)(2) of the Securities Act of 1933 (the ’33 Act), which do not require a showing of fraudulent intent. Companies that anticipate issuing securities in the near future should give serious thought to whether COVID-19-specific risk disclosures might be appropriate. Several companies have recently delayed IPOs due to concerns arising from the virus and its impact on the markets. But this disclosure issue applies as well to secondary offerings, which are also the target of ’33 Act claims.

We also expect plaintiffs’ firms to invoke Regulation S-K in support of claims premised on misstatements and omissions relating to COVID-19-related risks. For example, Item 105 of Regulation S-K requires disclosure in the Risk Factor section of the “most significant factors that make an investment in the registrant or offering speculative or risky.” And Item 303 of Regulation S-K requires disclosure in the MD&A section of “known trends or uncertainties” expected to have a “material” impact on “net sales or revenues or incomes.” While it remains an open question under the law whether and to what extent these regulations confer duties upon companies that can be actionable in private securities litigation, this theory is often invoked by shareholders in class action litigation.5

To mitigate the risk of liability for either securities fraud or a violation of the ’33 Act, companies should consider whether they have provided an appropriate level of transparency in their public disclosures into the expected impact of the virus on operations. Companies should consider whether their public filings

---

5 Importantly, the SEC recently proposed updates to Regulation S-K that would lower the threshold to trigger a company’s disclosure obligations. For example, the SEC has proposed changing Item 303 to require disclosure of known events that are “reasonably likely to cause”—as opposed to “will cause”—a material change in the relationship between costs and revenue. The SEC has similarly proposed changing the disclosure standard of Item 105 from the “most significant” factors to “material” factors that make investment in the registrant risky. These changes, if they take effect, may further encourage the plaintiffs’ securities bar to pursue event-driven litigation.
appropriately disclose risks related to the virus, and exercise care with any public statements that concern areas of their business that may be affected by the virus, as many public companies have already taken steps to do. Companies should also consider whether their prior forward-looking guidance has been overtaken by subsequent events and should be updated. For example, disclosures about the various risks related to supply chain disruptions may benefit from updates describing any disruptions that are imminent or have actually come to pass. In another example, guidance may need to be revised if management believes that the virus has eroded the underlying assumptions in the prediction. In addition to enhancing the disclosures in scheduled periodic reports, companies should consider whether to provide enhanced or updated disclosures or guidance in an 8-K filing or 6-K submission. More transparency may give the company better tools to defend any future claim of fraudulent intent or issuance of materially misleading statements or omissions. We expect the plaintiffs’ bar to be hyper-aggressive in prosecuting these lawsuits.

**Potential Risks of Derivative Lawsuits**

Plaintiffs may also repackage these theories under the derivative suit rubric. Shareholder plaintiffs may attempt to pin responsibility on a company’s board of directors for any damages resulting from the company’s response to COVID-19, whether by challenging the sufficiency of oversight over disclosures or business operations, or responses to red flags. Since these lawsuits can often be defeated by relying on a record of sound governance, including exercise of business judgment, boards may wish to consult with counsel about carefully documenting their consideration of, and response to, the impact of COVID-19 on their businesses, and consider establishing a public record of their diligence.

The human impact of COVID-19 has been significant and will continue to grow. The business and financial costs of this pandemic likely will be enormous. And we fully expect there to be follow-on litigation and regulatory activity. Reporting companies should take proactive steps to minimize the risk of regulatory investigations or private securities suits by carefully assessing the likely impact of the virus on their business operations and financial results and, if appropriate, updating their guidance and including COVID-19-specific risk disclosures in future filings. Companies’ boards should thoughtfully document their consideration of, and response to, the virus.

We intend to closely monitor the legal and business implications associated with the global fallout from the COVID-19 outbreak, and will continue to report developments.

* * *

---

6 Notably, several large companies, including Apple, Microsoft, Levi Strauss, and Royal Caribbean Cruises, have already updated prior guidance to warn that disruption to supply chains or other aspects of their business could affect operating results. As of February 28, 2020, 606 companies had already mentioned COVID-19 as a risk factor in SEC filings, including, in some instances, in Form 8-Ks.

SEC Reporting Companies: Considering the Impact of the Coronavirus on Public Disclosure and Other Obligations

In December 2019, an outbreak of a new strain of coronavirus, COVID-19, emerged in Wuhan, China. Within weeks, despite efforts to contain the virus in China that included widespread shutdowns of cities and businesses, the number of those infected grew significantly, and beyond China’s borders. As of today, the coronavirus is reported to have spread to over 80 countries, and the list is expected to continue to grow. As the virus continues to spread and effect business operations, supply chains, business and leisure travel, commodity prices, consumer confidence and business sentiment, and as companies ponder the impact on their businesses of employees working from home and consumers shunning air travel, stores, restaurants, sports events and other venues, it is hard to imagine a business or a sector that will be unaffected. SEC reporting companies need to consider not only the impact of the coronavirus on their operations from business continuity and risk management perspectives, but also on their public disclosure and SEC filing obligations.

The coronavirus outbreak is still evolving and its effects remain unknown. As SEC Chairman Jay Clayton noted in a January statement, available here, the SEC recognizes “that [the current and potential effects of the coronavirus] may be difficult to assess or predict with meaningful precision both generally and [on] an industry- or issuer-specific basis.” While it may be impossible to predict the ultimate impact of the coronavirus, what is clear today is that SEC reporting companies need to consider their disclosure obligations as events unfold. The coronavirus will impact public statements generally (including earnings releases), SEC reports (including financial statements), disclosure controls and procedures (“DCP”) and internal control over financial reporting (“ICFR”). The disclosure effort could require the attention of the audit committee, senior management, the financial reporting function, the legal/compliance function and internal audit. Presumably most, if not all, of these functions are represented on a company’s disclosure committee. And all of this will likely be taking place in the context of broader business continuity efforts, governmental actions and market turbulence.

We highlight below some key areas of focus. We also highlight below conditional relief issued today by the SEC for reporting companies affected by the coronavirus that have SEC filings due between March 1 and April 30, 2020. The press release (the “Conditional Relief Release”) is available here and the related order (the “Order”) is available here.
Disclosure Considerations

Speaking in March 2019, Director of the Division of Corporation Finance William Hinman used the example of Brexit as a disclosure topic that is complex, associated with uncertain risk and rapidly evolving. He noted that the SEC disclosure system, which in recent years has evolved to a more principles-based regime, emphasizes materiality and its requirements “articulate an objective and look to management to exercise judgment in satisfying that objective by providing appropriate disclosure when necessary. Management’s Discussion and Analysis [of Financial Condition and Results of Operations] (“MD&A”) and Risk Factors are examples of such disclosure requirements and are well-suited to elicit disclosure about complex and evolving areas.” He could have been speaking of the coronavirus as well.

- **Risk Factors.** Management should consider whether existing risk factors in the most recently filed Form 10-K, Form 20-F or Form 40-F annual report are adequate or need to be updated to address the coronavirus outbreak. To the extent that the coronavirus outbreak has caused material changes that make updates to the risk factors appropriate following the release of the annual report, reporting companies should consider updating risk factors in their quarterly reports (Form 10-Q) or by supplementing them in a Form 8-K. Non-U.S reporting companies should consider how best to update their risk factors, including by supplementing their risk factors in a Form 6-K submission. Reporting companies that have already filed reports with the SEC that contain risk factors related to the coronavirus have tended to include disclosure related to developments within existing risk factors related to natural disasters, public health or uncertainty regarding global macroeconomic conditions.

  The SEC Staff (the “Staff”) has stressed repeatedly that risk factors should not simply consist of boilerplate language and should not present risks in the hypothetical when the risks, in fact, have occurred. In light of this, reporting companies should ensure that risk factor disclosures related to the coronavirus speak to the specific risks to their business, rather than merely offer an overly broad account of recent events and general economic impacts. In recent public statements, the Staff also has reminded reporting companies that they should communicate with the board when preparing risk factor disclosure about emerging risks so that investors have knowledge of the same risks as are discussed at the board level.

  Management should, concurrently with any review of risk factors, also review the risks listed in the disclosure regarding forward-looking statements. This list tends to appear in a variety of places, and care should be taken to ensure that updates are carried across the various disclosures. Recall too that boilerplate language will not satisfy the “meaningful cautionary language” prong of the safe harbor under the Private Securities Litigation Reform Act (“PSLRA”).

- **MD&A.** A properly drafted MD&A is intended to provide investors with the information “necessary to an understanding of [a company’s] financial condition, changes in financial condition and results of operations.” Simply put, the MD&A, in the words of a former SEC Commissioner, is where
“management discusses and analyses where it has been and where it is going.” The SEC requires the identification of any known trends, demands, commitments, events and uncertainties that will, or that are reasonably likely to, impact a reporting company’s financial condition and results of operations. The Staff regularly emphasizes the need for reporting companies to focus on the importance of early warning disclosures, particularly where known trends and uncertainties are reasonably likely to create a significant disconnect between historical and future financial performance, to avoid later surprise disclosures.

In the context of the evolving and fast-spreading public health emergency, the challenge will be to address the trends and uncertainties with any degree of precision. The effects of the spread of the coronavirus and the myriad of responses could impact results of operations, as well as balance sheet items and cash flow. Management should consider whether unexpected cash needs could result in a stress on liquidity. To the extent that access to the capital markets is impaired, liquidity could become a significant issue (for example, for retailers and those in the travel and leisure sector). This, in turn, could present refinancing risks.

- **Accounting Impact.** Reporting companies should ensure that their accounting and financial reporting takes into account the current uncertainties and market volatility. Key assumptions and sensitivities should be re-evaluated. In addition, reporting companies should consider the adequacy of their disclosures regarding:
  - potential inventory write-downs and impairment losses;
  - loan defaults or covenant breaches, or amendments or waivers in lending agreements;
  - changes in credit risk of customers or others negatively impacted by current developments;
  - insurance recoveries;
  - changes in business or economic circumstances that affect the fair value of financial and nonfinancial assets and liabilities;
  - changes in growth forecasts that may impact impairment evaluations (e.g., goodwill, other intangible assets); and
  - strategies and policies to manage evolving developments.

- **Subsequent Events (ASC 855).** In a recent joint Public Statement regarding coronavirus reporting considerations, SEC Chairman Jay Clayton, Director Hinman, SEC Chief Accountant Sagar Teotia and PCAOB Chairman William D. Duhnke III emphasized the “need to consider disclosure of subsequent
events in the notes to the financial statements, in accordance with the guidance” included in Accounting Standards Codification (ASC) 855-10, Subsequent Events. The standard requires evaluation of events subsequent to the balance sheet date through the date the financial statements are issued.

- **Access to Information.** Reporting companies need to have access to their own control locations for purposes of preparing consolidated financial statements as well as financial or other information from equity method investees (Regulation S-X Rule 3-09), guarantors (Regulation S-X Rule 3-10) and acquired/to be acquired businesses (Regulation S-X Rule 3-05 or 3-14). If a reporting company will have challenges accessing control locations, it should consider the effects any such limitations will have on the preparation of its audited financial statements.

**Internal Controls**

If a reporting company were to experience significant disruptions to operations, access to offices and travel, internal controls may need to be modified or replaced as the business implements emergency measures. These changes to internal controls could include, for example, changes to personnel or functions, shifting of reporting lines or altering access to IT systems to enable a remote workforce to operate virtually. A partial or complete evacuation of physical premises to remote home offices, by definition, has the potential to increase the pressure on the efficacy of existing internal controls.

In addition to the need to evaluate the many disruptions caused by the coronavirus in the context of ICFR, reporting companies will also need to consider the potential increase in cybersecurity risk. The spread of the coronavirus, with the attendant uncertainty and internal changes to controls and reporting, is an ideal opportunity for cyber criminals to unleash phishing and other scams, whether as part of alerts purporting to provide updates on the spread of the virus or emails purporting to be from internal sources requesting changes in procedures (or wire transfers) on an emergency basis. Press reports already note a spike in suspicious emails seeking to exploit the coronavirus, including what appears to be emails coming from the World Health Organization. Malicious emails also may be used to spread panic among business partners, employees, vendors, suppliers and others.

As the SEC noted in the context of cybersecurity, it is critical that reporting companies take all required actions to inform the market about material risks and incidents in a timely fashion, and crucial to a company’s ability to make required disclosures of risks and incidents in a timely manner are DCPs. DCPs must provide an appropriate means of discerning the impact of significant risks on the business, financial condition and results of operations, and a “protocol” for assessing materiality. To the extent a reporting company suffers a cybersecurity breach, it will also need to consider its disclosure obligations in respect of that incident.
Market Updates

In light of the recent spread of the coronavirus beyond China, a number of reporting companies that issued earnings releases in the past few weeks (as part of their regularly scheduled earnings updates) are assessing whether previously issued guidance now needs to be revised. An increasing number of reporting companies are disclosing revisions to previously issued guidance or otherwise addressing in greater detail specific effects of the spread of the coronavirus on their businesses and operations. Some reporting companies may withdraw guidance and not provide any update due to the current level of uncertainty.

The SEC, in the Conditional Relief Release, suggests that reporting companies may need to consider whether previous disclosure needs to be revisited, refreshed or updated to the extent that prior disclosures have become materially inaccurate. It also has reminded reporting companies providing forward-looking information to keep the market informed of material developments, including known trends or uncertainties regarding the spread of the coronavirus, that they can take steps to avail themselves of the safe harbor under the PSLRA.

Regulation FD

U.S. reporting companies should be mindful of their obligations under Regulation FD. Shareholders and analysts will be keen to understand as much as they can, and in the crucible of a fast moving crisis things may be said that, in fact, constitute material non-public information, the disclosure of which may constitute selective disclosure for purposes of Regulation FD. In the Conditional Relief Release, the SEC has reminded reporting companies of their obligations in respect of selective disclosure.

While the SEC has for some time recognized social media as an appropriate method for U.S. reporting companies to announce key information in compliance with Regulation FD, use of social media for this purpose has its limitations. All reporting companies should also remind employees of their social media policies as statements could well be attributed to companies and their managements for liability purposes.

Restrictions on Trading

Officers, directors and other corporate insiders should be mindful of applicable restrictions on trading in connection with developments related to the coronavirus. Recent market conditions have presented opportunities for corporate share buybacks and individual purchases by officers and directors, and many companies and individuals are taking advantage of these opportunities. While the coronavirus is common knowledge, its evolving impact on a particular company may constitute material non-public information. As a result, any trading activity – whether involving share purchases or sales of shares, including in the case of employees following option exercises, and whether or not occurring during an open trading window – should be carefully evaluated to ensure that the company or individual is not in possession of material non-public information (and otherwise complies with applicable rules).
The SEC, in the Conditional Relief Release, reminds reporting companies that, if they have become aware of a risk related to the coronavirus that would be material to investors, they should refrain from engaging in securities transactions with the public and should take steps to prevent directors and officers (and other insiders) from trading until the material risks have been disclosed. This reminder is particularly important in light of the fact that corporate securities trading policies tend to tie trading windows to the release of earnings and that reporting companies, under the Order, may delay SEC filings for up to 45 days.

**The Role of the Board**

Directors of reporting companies should remain mindful that the SEC is of the view that Item 407(h) of Regulation S-K and Item 7 of Schedule 14A require disclosure of a board’s role in risk oversight. The SEC has, from time to time, highlighted that this disclosure is intended to provide investors with information about the role of the board, and the relationship between the board and senior management, in managing material risks. The SEC also has said that where a matter presents a material risk to the business, disclosure should address the nature of the board’s role in overseeing the management of that risk. The SEC has noted this most recently in the context of cybersecurity, and since then has suggested that this principle could apply to other areas where reporting companies face emerging or uncertain risks and that the cybersecurity guidance may well be useful when preparing disclosures about other similar themes. The SEC specifically had sustainability in mind, but this applies equally to the spread of the coronavirus.

**Conditional Relief**

In recognition of the fact that the effects of the coronavirus may present challenges for certain reporting companies to timely meet their SEC filing obligations, the SEC has issued the Order that, subject to certain conditions, provides reporting companies with an additional 45 days to file certain reports, schedules and forms that otherwise would have been due between March 1 and April 30, 2020. The SEC has indicated it may extend the time for the relief or provide additional relief as circumstances warrant. In the absence of the relief, reporting companies would have been subject to existing deadlines and otherwise would have been able to avail themselves of a 15-calendar day extension for annual reports (on Form 10-K, Form 20-F or Form 11-K) or a five-calendar day extension for quarterly reports (on Form 10-Q), in each case by relying on Rule 12b-25 under the Securities Exchange Act of 1934 (the “Exchange Act”).

To take advantage of the relief, a reporting company must be unable to meet a filing deadline due to circumstances related to the coronavirus and must furnish a Form 8-K or, if eligible, a Form 6-K by the later of March 16 and the original filing deadline, which:

- states that the reporting company is relying on the Order;
- provides a brief description of the reasons why the reporting company is unable to file the report, schedule or form on a timely basis;
discloses the estimated date by which the report, schedule or form is expected to be filed; and

provides, if appropriate, a risk factor explaining, if material, the impact of the coronavirus on the reporting company’s business.

If the reason the report cannot be filed timely relates to the inability of any person, other than the reporting company, to furnish any required opinion, report or certification, the Form 8-K or Form 6-K must have attached as an exhibit a statement signed by such person stating the specific reasons why such person is unable to furnish the required opinion, report or certification on or before the date such report must be filed.

The delayed filing must be made no later than 45 days after the original due date. The filing when made must disclose that the reporting company is relying on the Order and must state the reasons why it could not file the report, schedule or form on a timely basis.

The Order also provides relief from the requirement to make available a proxy statement, annual report and other soliciting materials (“Soliciting Materials”) or to furnish an information statement and annual report (“Information Materials”), in each case under the Exchange Act, provided:

- the reporting company’s securityholder has a mailing address in an area where, as a result of the coronavirus, common carriers have suspended delivery service of the type or class customarily used by the reporting company or other person making the solicitation; and

- the reporting company or other person making a solicitation has made a good faith effort to furnish the Soliciting Materials to the securityholder, as required by the rules applicable to the particular method of delivering Soliciting Materials to the securityholder or, in the case of Information Materials, the registrant has made a good faith effort to furnish the Information Materials to the securityholder in accordance with the rules applicable to Information Materials.

The Conditional Relief Release sets forth various Staff positions regarding eligibility to use Form S-3 (and well-known seasoned issuer status) and Form S-8 eligibility (and the current public information eligibility requirement of Rule 144(c)), in each case if the reporting company is current as of the first day of the relief period and it files any report due during the relief period within 45 days of the filing deadline of the report. The Conditional Relief Release also states that reporting companies relying on the Order will be deemed to have a due date 45 days after the original filing deadline for an annual or quarterly report and, as such, will be permitted to rely on Rule 12b-25 if they are unable to file the annual or quarterly report on or before the extended due date.

The SEC has indicated in the Conditional Relief Release that reporting companies facing administrative or other challenges in complying with their obligations under the securities laws by reason of the coronavirus
should contact the Staff, which will address issues raised on a case-by-basis “in light of their fact-specific nature.” Staff members have reiterated in various conversations with us that the Staff stands ready to provide assistance where possible.

* * *

The Staff is on record as monitoring the effects of the coronavirus. Staff statements have been made largely in the context of a willingness to provide guidance and other assistance to reporting companies. The Order is one example of that willingness. At the same time, the Staff has been clear in reminding reporting companies of their ongoing disclosure obligations and the importance of internal processes. In the Conditional Relief Release, Chairman Clayton states:

“We also remind all companies to provide investors with insight regarding their assessment of, and plans for addressing, material risks to their business and operations resulting from the coronavirus to the fullest extent practicable to keep investors and markets informed of material developments. How companies plan and respond to the events as they unfold can be material to an investment decision, and I urge companies to work with their audit committees and auditors to ensure that their financial reporting, auditing and review processes are as robust as practicable in light of the circumstances in meeting the applicable requirements.”

This is a useful reminder of the importance of transparency, accuracy and precision of public disclosure and of maintaining proper internal controls. A critical component of these efforts will be internal coordination to ensure that all of the dots are connected.

**Force Majeure in the Wake of the Coronavirus**

Force majeure clauses are contract provisions that excuse a party’s nonperformance when “acts of God” or other extraordinary events prevent a party from fulfilling its contractual obligations.¹ These clauses are currently gaining attention due to the coronavirus outbreak (COVID-19), which has significantly impacted the global economy and businesses’ ability to manufacture, distribute and sell their products.² Due to the risks that COVID-19 poses to ongoing business operations, companies should proactively consider the potential impacts a global pandemic could have on their operations, take steps to mitigate their operational risk, and assess the availability of insurance coverage in the event that risk materializes. Taking these proactive measures will decrease the likelihood of force majeure disputes in the future; it will also help any party asserting a claim of force majeure to establish that it took reasonable steps to avoid contractual interruption.

**Basic Principles of Force Majeure Clauses**

Courts look to several elements when considering the applicability of a force majeure clause: (1) whether the event qualifies as force majeure under the contract, (2) whether the risk of nonperformance was foreseeable and able to be mitigated and (3) whether performance is truly impossible.

The primary focus is on whether the clause encompasses the type of event a contractual party claims is causing its nonperformance.³ Force majeure clauses are generally interpreted narrowly; therefore, for an event to qualify as force majeure it must be outlined in the clause at issue.⁴ Even when a potential force majeure event is encompassed by the relevant clause, however, a party is under an obligation to mitigate any foreseeable risk of nonperformance, and cannot invoke force majeure where the potential nonperformance was foreseeable and could have been prevented or otherwise mitigated.⁵ Furthermore, depending on the relevant contractual language and governing law, a party generally will be required to establish that performance is truly impossible rather than merely impracticable.⁶ In many force majeure cases, nonperformance will not be excused if it is merely financially or economically more difficult to satisfy contractual obligations.⁷ Some jurisdictions, however, may only require that performance be impracticable, and some contracts may set a different standard (e.g., performance is “inadvisable”).⁸ As a result, companies should closely scrutinize both the language of their force majeure clauses and the applicable law when considering their obligations and potential nonperformance risks.
Impact of COVID-19 on Force Majeure Clauses

The coming weeks and months will bring many assertions of force majeure in response to quarantines, business closures and travel restrictions. Whether such assertions of force majeure will be successful will be heavily dependent on the facts relevant to the particular contracts and businesses at issue.

It is virtually certain that economic and business impacts of the type seen already in China, Korea, Italy and Japan will spread to other jurisdictions. In response to this, companies—wherever their operations—should be taking proactive steps to ensure continuity of operations sufficient to meet existing contractual obligations and be evaluating whether their counterparties are also taking steps such that they will not have the need to invoke force majeure.

Taking affirmative steps now is especially important given the ability that companies currently have to foresee and attempt to mitigate any potential operational impacts in advance of the outbreak spreading to any new locality. Ideally, businesses will be able to plan accordingly to avoid any disruptions in their operations if the virus continues to spread.

Examples of steps companies might actively consider taking now (and seek to ensure that counterparties are taking) include: securing alternate supply streams in the event a supplier’s operations are impacted; planning for how employees can continue working remotely, or how functions can be transferred to other locations, in the event of quarantines and business closures; and mitigating the impact of restricted travel both around the globe and within countries. Even if such steps are not successful in avoiding the need to declare a force majeure, a company’s attempt to mitigate its risk in advance will be highly relevant to a court’s determination of whether reasonable steps were taken to continue to satisfy contractual obligations, and whether performance was truly impossible. Affirmative measures to help ensure a company is prepared for the possibility of business interruption resulting from COVID-19 include a careful review of insurance policies that may cover such an event.

Business Interruption Insurance

Business interruption insurance is intended to cover losses resulting from interruptions to a business’s operations, and generally covers lost revenue, fixed expenses such as rent and utility, or expenses from operating from a temporary location. While these policies most frequently relate to physical property damage, businesses should nevertheless assess their coverage to determine whether they might be covered for losses due to business interruptions resulting from COVID-19.

Several companies were able to recoup losses through business interruption insurance for various operational disruptions after the global outbreak of Severe Acute Respiratory Syndrome (SARS) in 2002-2003. In turn, however, many insurers have now excluded viral or bacterial outbreaks from standard business interruption policies. As a result, it is critical for companies to proactively assess the specific
terms and conditions of their governing insurance policies to determine whether interruptions from COVID-19 would be covered. In connection with that assessment, companies should review their policies’ insurer notice requirements to ensure their scrupulous compliance with those provisions in the event coverage is ultimately sought. Taking these proactive steps will help companies be prepared for any financial or legal implications that may result from the continued spread of COVID-19.

We intend to closely monitor the legal and business implications associated with the global fallout from the COVID-19 outbreak, and will continue to report developments.
